Building People Mun Leong Liew, 2016-11-30 Eavesdrop on a top business leader to learn the secrets of great leadership Building People provides a glimpse into the mind of one of Asia's keenest and most effective business leaders. Before becoming Chairman of Changi Airport Group and Surbana Jurong, author Mun Leong Liew was named Best CEO in Singapore, Best CEO in Asia, CEO of the Year, Outstanding CEO of the Year, and more—but his successes are not based strictly upon the numbers. This book reveals the personal and professional philosophy behind this extraordinarily effective leader, in the context of frank and insightful emails to his staff. Touching on everything from honour and potential to training and mentorship, these messages paint a clear picture of the difference between good and great leadership. Effective leaders build companies, but legendary leaders build people—by strengthening the heart of your organisation, you enable robust growth and dynamic stability from the inside out. These emails go beyond mere public relations to lay open the true nature of a man who is honestly, deeply committed to his job, his responsibility, his organisation, and most of all, his people. Learn why work-life balance is not a zero-sum game Discover what pragmatism and commitment truly mean in business Realise the importance of good partnerships and unsung heroes Manage change effectively and employ it wisely for sustainable success By eavesdropping on a leader's communications with the people he serves, you get a real sense of the man behind the success. Great leadership is rooted in a philosophy of "building up" instead of tearing down, and motivated by the sincere belief that we bring our own purpose into everything we do. Building People brings great leadership to life, and inspires action over theory through the insights of Mun Leong Liew.

Multimodal Transport Systems Slim Hammadi, Mekki Ksouri, 2013-12-11 The use and management of multimodal transport systems, including car-pooling and goods transportation, have become extremely complex, due to their large size (sometimes several thousand variables), the nature of their dynamic relationships as well as the many constraints to which they are subjected. The managers of these systems must ensure that the system works as efficiently as possible by managing the various causes of malfunction of the transport system (vehicle breakdowns, road obstructions, accidents, etc.). The detection and resolution of conflicts, which are particularly complex and must be dealt with in real time, are currently processed manually by operators. However, the experience and abilities of these operators are no longer sufficient when faced with the complexity of the problems to be solved. It is thus necessary to provide them with an interactive tool to help with the management of disturbances, enabling them to identify the different disturbances, to characterize and prioritize these disturbances, to process them by taking into account their specifics and to evaluate the impact of the decisions in real time. Each chapter of this book can be broken down into an approach for solving a transport problem in 3 stages, i.e. modeling the problem, creating optimization algorithms and validating the solutions. The management of a transport system calls for knowledge of a variety of theories (problem modeling tools, multi-objective problem classification, optimization algorithms, etc.). The different constraints increase its complexity drastically and thus require a model that represents as far as possible all the components of a problem in order to better identify it and propose corresponding solutions. These solutions are then evaluated according to the criteria of the transport providers as well as those of the city transport authorities. This book consists of a state of the art on innovative transport systems as well as the possibility of coordinating with the current public transport system and the authors clearly illustrate this coordination within the framework of an intelligent transport system. Contents 1. Dynamic Car-pooling, Slim Hammadi and Nawel Zangar. 2. Simulation of Urban Transport Systems, Christian Tahon, Thérèse Bonte and Alain Gibaud. 3. Real-time Fleet Management: Typology and Methods, Frédéric Semet and Gilles Goncalves. 4. Solving the Problem of Dynamic Routes by Particle Swarm, Mostefa Redouane Khouahjia, Laetitia Jourdan and El Ghazali Talbi. 5. Optimization of Traffic at a Railway Junction: Scheduling Approaches Based on Timed Petri Nets, Thomas Bourdeaud'huy and Benoît Trouillet. About the Authors Slim Hammadi is Full Professor at the Ecole Centrale de Lille in France, and Director of the LAGIS Team on Optimization of Logistic systems. He is an IEEE Senior Member and specializes in distributed optimization, multi-agent systems, supply chain management and metaheuristics. Mekki Ksouri is Professor and Head of the Systems Analysis, Conception and Control Laboratory at Tunis El Manar University, National Engineering School of Tunis (ENIT) in Tunisia. He is an IEEE Senior Member and specializes in control systems, nonlinear systems, adaptive control and optimization. The multimodal transport network customers need to be oriented during their travels. A multimodal information system (MIS) can provide customers with a travel support tool, allowing them to express their demands and providing them with the appropriate responses in order to improve their travel conditions. This book develops methodologies in order to realize a MIS tool capable of ensuring the availability of permanent multimodal information for customers before and while traveling, considering passengers mobility.

Rafael Viñoly Architects Philip Jodidio, Rafael Viñoly, 2011 KEYNOTE: The definitive monograph highlighting the global works of the visionary hailed by The New York Times' Herbert Muschamp as the most elegant architect now practicing in the United States. For nearly half a century Rafael Vinoly has been driven by the belief that the responsibility of architecture is to elevate the public realm. While his early work in Argentina transformed the landscape of his native continent, his first major projects in New York--the John Jay College of Criminal Justice--and in Tokyo--the International Forum--established Vinoly as an international presence in architecture, whose buildings sustain a structural originality that transcends passing fads. This monograph features a chronological sampling of Vinoly's best work in the United States, Latin America, Europe, Asia,

Africa and the Middle East. The large and small-scale projects encompass courthouses, private residences, athletic facilities, performing arts centers, museums, and educational buildings. Illustrated with photographs, plans, and drawings, and accented by Vinoly's personal reflection on his career, this volume brings together the achievements of one of today's most internationally acclaimed architects. AUTHOR: Rafael Vinoly was born in Uruguay and by the age of twenty was founding partner of Estudio de Arquitectura, which would become one of the largest design studios in Latin America. In 1983 he founded Rafael Vinoly Architects PC, a New York based firm that now has offices in London, Los Angeles, San Francisco, Chicago, and Abu Dhabi. Philip Jodidio has published numerous books on contemporary architecture, including Architecture: Art and Architecture: Nature. He lives in Grimentz, Switzerland.
