Priming the Pump: How TRS-80 Enthusiasts Helped Spark the PC Revolution Theresa Welsh, David Welsh,2007-03-15 The authors were part of a community of small software entrepreneurs who created the first applications for personal computers, as the computer revolution in the late 1970s and early 1980s changed the way we create and store documents and data. They personally knew many of the principle players whose accomplishments are the stuff of legends, and whose work and vision led the way to our computer-saturated society. This book captures this unique era, through the stories of eye-witnesses, when personal computing was just an idea -- an idea whose time had come! In these pages you will learn how a young engineer named Steve Leininger, working alone, built the first TRS-80 microcomputer . He had been hired by Tandy Corporation to develop a computer product to be sold in their Radio Shack stores for a price their customers could afford. Development costs were less than \$150,000. Yet no one had ever sold a complete off-the-shelf personal computer before. Would anyone buy it? As it turned out, the desire for a computer of one's own was overwhelming! Author David Welsh was one of the hobbyists-turned-programmers who bought a TRS-80. Using self-taught programming skills, he created a word processor and he and his wife Theresa found themselves in business, selling their product worldwide to enthusiastic fans who were eager to throw away their typewriters. They were part of the leading edge of the software business, joining hundreds of other small entrepreneurs selling software out of garages, basements and whatever space they could rent cheap. David and Theresa Welsh tell their own story and that of many other pioneers. Includes over 100 illustrations of early computer products and ads.

Edward Wilding focuses particularly on internal IT risk, workplace crime, and the preservation of evidence, because it is these areas that are generally so mismanaged. There is advice on: ¢ preventing computer fraud, IP theft and systems sabotage ¢ adopting control and security measures that do not hinder business operations but which effectively block criminal access and misuse ¢ securing information - in both electronic and hard copy form ¢ understanding and countering the techniques by which employees are subverted or entrapped into giving access to systems and processes ¢ dealing with catastrophic risk ¢ best-practice for monitoring and securing office and wireless networks ¢ responding to attempted extortion and malicious information leaks ¢ conducting covert operations and forensic investigations ¢ securing evidence where computer misuse occurs and presenting this evidence in court and much more. The author's clear and informative style mixes numerous case studies with practical, down-to-earth and easily implemented advice to help everyone with responsibility for this threat to manage it effectively. This is an essential guide for risk and security managers, computer auditors, investigators, IT managers, line managers and non-technical experts; all those who need to understand the threat to workplace computers and information systems.
