**Individual Preparedness and Response to Chemical, Radiological, Nuclear, and Biological Terrorist Attacks** Lynn E. Davis, Arthur Melmed, Richard Krop, 2003-09-05 Individual preparedness is an important element of our nation's strategy for homeland security. This report adopts a scenario-driven approach that provides a rigorous way to identify actions-linked specifically to terrorist attacks-individuals can take to protect their health and safety. The result is an individual's strategy across four types of terrorist attacks-chemical, radiological, nuclear, and biological-consisting of overarching goals and simple and directive response and preparatory actions. The actions are appropriate regardless of likelihood of an attack, scale of attack, or government alert level; designed to be sensitive to potential variations; and defined in terms of simple rules that should be easy for individuals to adopt.

**How to Build Max-Performance Buick Engines** Jefferson Bryant,2008-06-01 The photos in this edition are black and white. Skylarks, GSXs, Grand Nationals, Rivas, Gran Sports; the list of formidable performance Buicks is impressive. From the torque monsters of the 1960s to the high-flying Turbo models of the '80s, Buicks have a unique place in performance history. During the 1960s, when word of the mountains of torque supplied by the big-inch Buicks hit the street, nobody wanted to mess with them. Later, big-inch Buicks and the Hemi Chryslers went at it hammer and tongs in stock drag shootouts and in the pages of the popular musclecar magazines of the day. The wars between the Turbo

Buicks and Mustang GTs in the 1980s were also legendary, as both cars responded so well to modifications. *How to Build Max-Performance Buick Engines* is the first performance engine book ever published on the Buick family of engines. This book covers everything from the Nailheads of the '50s and early '60s, to the later evolutions of the Buick V-8 through the '60s and '70s, through to the turbo V-6 models of the '70s and '80s. Veteran magazine writer and Buick owner Jefferson Bryant supplies the most up-to-date information on heads, blocks, cams, rotating assemblies, interchangeability, and oiling-system improvements and modifications, along with details on the best performance options available, avenues for aftermarket support, and so much more. Finally, the Buick camp gets the information they have been waiting for, and it's all right here in *How to Build Max-Performance Buick Engines*.

**Explosives Engineering** Paul W. Cooper, 2018-07-19 This graduate text, and Cooper's companion introductory text ('Introduction to the Technology of Explosives'), serve the same markets as the successful explosives reference by Meyer, now in its 4th edition. VCH also published the International Journal of Propellants, Explosives, and Pyrotechnics. The resulting package would give VCH the major presence in the field. This text presents the basic technologies used in the engineering of explosives and explosive systems, i.e., chemistry, burning, detonation, shock waves, initiation theories, scaling. The book is written for upper-division undergraduate or graduate-level scientists and engineers, and assumes a good grasp of basic physics, chemistry, mechanics and mathematic through calculus. It is based on lecture notes used for graduate courses at the Dept. of Energy Laboratories, and could serve as a core text for a course at schools of mining or military engineering. The intent of the book is to provide the engineer or scientist in the field with an understanding of the phenomena involved and the engineering tools needed to solve/

design/ analyze a broad range of real problems.

**2006** Jan M. Mutmanský, Raja. V. Ramani, 2006-05-18  
This volume is the eleventh in a series which documents the technical papers of the mine ventilation symposium, which was initiated in 1982 by the Underground Ventilation Committee of the Society for Mining, Metallurgy, and Exploration, Inc. In more recent years, the event has expanded to include all of North America and is known as the US/North American Mine Ventilation Symposium. The US/North American Mine Ventilation Symposium 2006 designated 'Coal Mine Methane Capture and Utilization' and 'Diesel Issues for Underground and Surface Mines' as topics of special interest. Numerous papers discussed these two topics, and there were presentations on mine dusts, mine fires, ventilation in large-

opening mines, and numerous other ventilation topics. The symposium was supplemented by short courses on state-of-the-art in diesel emissions technology, computer analysis of ventilation circuits, personal dust monitoring, and methane capture technology. In addition, field trips to mines, research facilities, and methane gathering sites were offered to participants of the symposium. The book is of special interest to practitioners, educators, and researchers in the field of ventilation of mines, tunnels, and other underground facilities. Includes a CD-ROM of the proceedings.
