Biologically based technologies for pest control. ,1995 The way the nation manages pests is changing because of efforts to reduce the reliance on conventional pesticides. Driving this change is strong public opinion coupled with action by Congress and by federal and state agencies. At the same time, pest control needs are rising. Many important pests are now resistant to formerly effective chemical controls. And new pests continue to enter the country or spread to new locations where they threaten agriculture, native ecosystems, or human health. The farmers, foresters, ranchers, and others who seek to prevent excessive pest damage are increasingly aware of the shortcomings of conventional pest control approaches.

Biological Control Heikki M. T. Hokkanen,James M. Lynch,2003-10-30 Biological control of insect pests, plant pathogens, and weeds is the only major alternative to the use of chemical pesticides in agriculture and forestry. This book is the first comprehensive attempt at a balanced benefit/risk assessment of biological control. It covers classical biological control of pests and weeds, augmentation of natural enemies, and the use of biopesticides. Unique sections deal with genetic engineering of biocontrol agents and crop plants, economic analysis of biocontrol, and the ecological consequences of the introduction of organisms. The book will be of interest to researchers and postgraduate students in biotechnology, agriculture, forestry, and environmental sciences.

Carrion Ecology and Management Pedro P. Olea,Patricia Mateo-Tomás,José Antonio Sánchez-Zapata,2019-07-22 Carrion, or dead animal matter, is an inherent component of aquatic and terrestrial ecosystems worldwide, and is exploited by a wide diversity of organisms from different trophic levels, including microbes, arthropods and vertebrates. Further, carrion consumption by scavengers, i.e. scavenging, supports key ecosystem functions and services such as recycling nutrients and energy, disposing of carcasses and regulating disease spread. Yet, unlike dead plant matter, dead animal decomposition has received little attention in the fields of ecology, wildlife conservation and environmental management, and as a result the management of carrion for maintaining biodiversity and functional ecosystems has been limited. This book addresses the main ecological patterns and processes relating to the generation and consumption of carrion both in terrestrial and aquatic ecosystems. It also discusses a number of conservation concerns and associated management issues, particularly regarding the increasing role of human-mediated carrion in ecosystems. Lastly, the book outlines future research lines in carrion ecology and management, and identifies the major challenges for scavengers and scavenging processes in the Anthropocene.

Heat Treatments for Postharvest Pest Control Juming Tang,2007-01-01 This book, which consists of 13 chapters, provides fundamental and up-to-date published information on thermal treatments for the management of postharvest pests associated with agricultural commodity structures. Specific topics that are covered include: (i) regulatory issues for quarantine and phytosanitary treatments; (ii) basic information on temperature measurement, heat transfer, and thermal death kinetics of insects; (iii) biological responses of agricultural commodities and insect pests; (iv) biological responses of plants, insects and pathogens to heat; and (v) an introduction to current and potential quarantine treatments based on hot air, hot water, and radio frequency energy. This book should serve as an important resource for readers who are interested in knowledge, methods and strategies used in the development of environmentally friendly processes based on thermal energy. This book may also be suited for readers in the academe, industry and government.

The Handbook of Mites of Economic Plants Vincenzo Vacante,2015-12-21 Mites pose a serious problem to plants worldwide, attacking crops and spreading disease. When mites damage crops of economic importance the impacts can be felt globally. Mites are among the most diverse and successful of invertebrates, with over 45,000 described species, with many more thousands to be discovered. They are responsible for a significant portion of the losses of crops for food, fibre, industry and other purposes, and require expensive and often controversial pest control measures. Understanding these mites is vital for entomologists, pest researchers, agronomists and food producers. Knowledge of mite pests helps to inform control strategies and optimize the production of economic plants and the agrarian economy. This encyclopedia provides a thorough coverage of the mites and the problems they cause to crops, yet it is easily searchable, organised by mite species and subdivided into helpful headings. It takes a worldwide view of the issue of mites injurious to economic plants, describing mites prevalent in different regions and discussing control methods appropriate in different environments. This book provides an encyclopaedic reference to the major mites, described by family in terms of their internal and external morphology, bio-ecology and family systematics. Methods of mite collection and laboratory study is described, as well as species diagnostic characteristics, worldwide distribution, host plants, identification by the type of damage they cause and control strategies, including chemical and biological intervention and integrated pest management measures. Mites of the following families are included: (Eriophyoidea, Tarsonemidae, Tuckerellidae, Tenuipalpidae, Tetranychidae, Acaridae, Penthaleidae). Mites of Economic Plants is an important resource for students of entomology and crop production, and as a thorough reference guide for researchers and field workers involved with mites, crop damage and food production.
