*Canonizing Hypertext* Astrid Ensslin,2007-05-09  
This innovative monograph focuses on a  
contemporary form of computer-based literature  
called 'literary hypertext', a digital,  
interactive, communicative form of new media  
writing. Canonizing Hypertext combines theoretical  
and hermeneutic investigations with empirical  
research into the motivational and pedagogic  
possibilities of this form of literature. It  
focuses on key questions for literary scholars and  
teachers: How can literature be taught in such a  
way as to make it relevant for an increasingly  
hypermedia-oriented readership? How can the  
rapidly evolving new media be integrated into  
curricula that still seek to transmit  
'traditional' literary competence? How can the  
notion of literary competence be broadened to take  
into account these current trends? This study,  
which argues for hypertext's integration in the

literary canon, offers a critical overview of developments in hypertext theory, an exemplary hypertext canon and an evaluation of possible classroom applications.

Frederick Hawthorne, Kenneth Shelly, Richard J. Wiersema, 2013-11-11 *Frontiers in Neutron Capture Therapy* contains current research results originally presented at the Eighth International Symposium on Neutron Capture Therapy for Cancer in La Jolla, CA. This comprehensive collection of peer-reviewed manuscripts is showcased in two volumes covering all aspects of the development of this multidisciplinary approach to cancer therapy. Volume I of this work includes clinical results and current progress in treatment planning, neutron sources and dosimetry, while Volume II presents the synthesis, pharmacology and tissue-targeting design of boron compounds, including work on preclinical dosimetry and radiobiology. Intended for researchers and clinicians involved with or interested in new modes of cancer therapy, this volume will also serve as a useful guideline for scientists, students, and practitioners in the field.

**Quantitative Analysis in Nuclear Medicine Imaging** Habib Zaidi, 2006-07-11 This book provides

a review of image analysis techniques as they are applied in the field of diagnostic and therapeutic nuclear medicine. Driven in part by the remarkable sophistication of nuclear medicine instrumentation and - crease in computing power and its ready and inexpensive availability, this is a relatively new yet rapidly expanding field. Likewise, although the use of nuclear imaging for diagnosis and therapy has origins dating back almost to the pioneering work of Dr G. de Hevesy, quantitative imaging has only recently emerged as a promising approach for diagnosis and therapy of many diseases. An effort has, therefore, been made to place the reviews provided in this book in a broader context. The effort to do this is reflected by the inclusion of introductory chapters that address basic principles of nuclear medicine instrumentation and dual-modality imaging, followed by overview of issues that are closely related to quantitative nuclear imaging and its potential role in diagnostic and therapeutic applications. A brief overview of each chapter is provided below. Chapter 1 presents a general overview of nuclear medicine imaging physics and instrumentation including planar scintigraphy, single-photon emission computed tomography (SPECT) and positron emission tomography (PET). Nowadays, patients' diagnosis and therapy is rarely done without the use of imaging technology. As such, imaging considerations are incorporated in almost every chapter of the book. The development of dual-modality - aging systems is an emerging research field, which is addressed in chapter 2.

**Phantom Shadows** Dianne Duvall, 2011-10-24 A doctor and a reformed bad-boy vampire struggle with danger and their desires in this New York Times–bestselling paranormal romantic suspense novel. Dr. Melanie Lipton is no stranger to the supernatural. She knows immortals better than they know themselves, right down to their stubborn little genes. So although a handsome rogue immortal seems suspicious to her colleagues, Sebastien Newcombe intrigues Melanie. His history is checkered, his scars are impressive, and his ideas are daring. But it's not his ideas that have Melanie fighting off surges of desire... Bastien is used to being the bad guy. In fact, he can't remember the last time he had an ally he could trust. But Melanie is different—and under her calm, professional exterior he senses a passion beyond anything in his centuries of experience. Giving in to temptation is out of the question—he can't put her in danger. But she isn't asking him... RT Book Reviews “With this excellent entry, rising star Duvall is fast proving to be a major player in paranormal romance!”— “With a deeply emotional love story, two beautiful, complex main characters, and a pulse-pounding adventure that won't let up, this book was haunting and addictive.”—The Romance Reviews

**XIII Mediterranean Conference on Medical and Biological Engineering and Computing 2013** Laura M. Roa Romero,2013-10-01 The general theme of MEDICON 2013 is Research and Development of Technology for Sustainable Healthcare. This decade is being characterized by the appearance and use of emergent technologies under development. This situation has produced a tremendous impact on Medicine and Biology from which it is expected an unparalleled evolution in these disciplines towards novel concept and practices. The consequence will be a significant improvement in health care and well-fare, i.e. the shift from a reactive medicine to a preventive medicine. This shift implies that the citizen will play an

important role in the healthcare delivery process, what requires a comprehensive and personalized assistance. In this context, society will meet emerging media, incorporated to all objects, capable of providing a seamless, adaptive, anticipatory, unobtrusive and pervasive assistance. The challenge will be to remove current barriers related to the lack of knowledge required to produce new opportunities for all the society, while new paradigms are created for this inclusive society to be socially and economically sustainable, and respectful with the environment. In this way, these proceedings focus on the convergence of biomedical engineering topics ranging from formalized theory through experimental science and technological development to practical clinical applications.
