Simulating Knowledge Dynamics in Innovation Networks Nigel Gilbert,Petra Ahrweiler,Andreas Pyka,2014-07-22 The competitiveness of firms, regions and countries greatly depends on the generation, dissemination and application of new knowledge. Modern innovation research is challenged by the need to incorporate knowledge generation and dissemination processes into the analysis so as to disentangle the complexity of these dynamic processes. With innovation, however, strong uncertainty, nonlinearities and actor heterogeneity become central factors that are at odds with traditional modeling techniques anchored in equilibrium and homogeneity. This text introduces SKIN (Simulation Knowledge Dynamics in Innovation Networks), an agent-based simulation model that primarily focuses on joint knowledge creation and exchange of knowledge in innovation co-operations and networks. In this context, knowledge is explicitly modeled and not approximated by, for instance, the level of accumulated R&D investment. The SKIN approach supports applications in different domains ranging from sector-based research activities in knowledge-intensive industries to the activities of international research consortia engaged in basic and applied research. Following a general description of the SKIN model, several applications and modifications are presented. Each chapter introduces in detail the structure of the model, the relevant methodological considerations and the analysis of simulation results, while options for empirically validating the models' structure and outcomes are also discussed. The book considers the scope of further applications and outlines prospects for the development of joint modeling strategies.

Yearbook of Morphology 1997 G.E. Booij,Jaap van Marle,2013-03-14 Interest in morphology has revived in recent years and the Yearbook of Morphology has provided great support for this revival, with its articles on topics that are central to the current theoretical debates. The Yearbook of Morphology 1997 focuses on the relationship between morphology and other modules of the grammar, especially phonology, syntax and semantics. Among the basic questions discussed are: how does morphology differ from other modules of the grammar, syntax in particular? What are the possible forms of interaction between the modules? How does semantics constrain formal variation in morphology? The evidence adduced is derived from a variety of languages. Audience: Theoretical, descriptive and historical linguists, morphologists, phonologists, and psycholinguists.
