Virtual Airplane vol. 1: Preparations Witold Jaworski,2021-02-01 The four volumes of the Virtual Airplane series will teach you how to create the model shown on the cover. This guide assumes that you may know nothing about the 3D modeling software, so it starts the course from the very basics. In subsequent chapters the author builds a computer model of the P-40B fighter, gradually introducing new methods and tools. Every step of this workflow is shown in numerous illustrations. This first volume (Preparations) describes how to prepare and verify the reference drawings, which you need to build a 3D model. Preparations also discusses various methods of checking and enhancing these reference images. It can be useful, as a guide on its own, for all who would like to draw accurate scale plans. You can learn there how to use photos and original aircraft documentation (including manufacturer's blueprints).
