Red Pedagogy Sandy Grande, 2015-09-28 This groundbreaking text explores the intersection between dominant modes of critical educational theory and the socio-political landscape of American Indian education. Grande asserts that, with few exceptions, the matters of Indigenous people and Indian education have been either largely ignored or indiscriminately absorbed within critical theories of education. Furthermore, American Indian scholars and educators have largely resisted engagement with critical educational theory, tending to concentrate instead on the production of historical monographs, ethnographic studies, tribally-centered curricula, and site-based research. Such a focus stems from the fact that most American Indian scholars feel compelled to address the socio-economic urgencies of their own communities,

against which engagement in abstract theory appears to be a luxury of the academic elite. While the author acknowledges the dire need for practical-community based research, she maintains that the global encroachment on Indigenous lands, resources, cultures and communities points to the equally urgent need to develop transcendent theories of decolonization and to build broad-based coalitions.

Foundations of Deep Reinforcement Learning Laura

Graesser, Wah Loon Keng, 2019-11-20 The Contemporary Introduction to Deep Reinforcement Learning that Combines Theory and Practice Deep reinforcement learning (deep RL) combines deep learning and reinforcement learning, in which artificial agents learn to solve sequential decision-making problems. In the past decade deep RL has achieved remarkable results on a range of problems, from single and multiplayer games—such as

Go, Atari games, and DotA 2—to robotics. Foundations of Deep Reinforcement Learning is an introduction to deep RL that uniquely combines both theory and implementation. It starts with intuition, then carefully explains the theory of deep RL algorithms, discusses implementations in its companion software library SLM Lab, and finishes with the practical details of getting deep RL to work. This guide is ideal for both computer science students and software engineers who are familiar with basic machine learning concepts and have a working understanding of Python. Understand each key aspect of a deep RL problem Explore policy- and value-based algorithms, including REINFORCE, SARSA, DQN, Double DQN, and Prioritized Experience Replay (PER) Delve into combined algorithms, including Actor-Critic and Proximal Policy Optimization (PPO) Understand how algorithms can be parallelized synchronously and asynchronously Run algorithms in SLM Lab and learn the practical implementation details for getting deep RL to work Explore algorithm benchmark results with tuned hyperparameters Understand how deep RL environments are designed Register your book for convenient access to downloads, updates, and/or corrections as they become available. Public Private Partnerships in Education Susan

Robertson, Karen Mundy, Antoni Verger, 2012-01-01 'Far from simply being a form of cost sharing between the state and the market, PPP has been celebrated by some, and condemned by others, as the champion of change in the new millennium. This book has been written by the best minds in education policy, political economy, and development studies. They convincingly argue that public private partnership represents a new mode of governance that ranges from covert support of the private sector (vouchers, subsidies) to overt collaboration with corporate actors in the rapidly growing education industry. The analyses are simply brilliant and indispensable for understanding how and why this particular best/worst practice went global.' – Gita Steiner-Khamsi, Columbia University, New York, US This insightful book brings together both academics and researchers from a variety of international organizations and aid agencies to explore the complexities of public private partnerships (PPPs) as a resurgent, hybrid mode of

educational governance that operates across scales, from the community to the global. The contributors expertly study the different types of partnership arrangements and thoroughly critique the value of PPPs. Some chapters explore how PPPs, as a policy idea, have been constructed in transnational agendas for educational development and circulated globally, whilst other chapters explores the role and implications of PPPs in developing countries, providing arguments for and against an expanding reliance on PPPs in national educational systems. The theoretical framing of the book draws upon leading theories of international relations to develop a unique perspective on the global governance of education. It will prove insightful for both scholars and policymakers in public policy and education.

Status and Management of Tropical Coastal Fisheries in Asia

Geronimo Silvestre, Daniel Pauly, 1997

Assessment, management and future directions for coastal fisheries in Asian countries Silvestre, G. et al, 2003-12-08

In Asia, the fisheries sector is important in terms of food security,

livelihoods and foreign exchange earnings. However, as in many parts of the world, there are signs that capture fisheries are fully exploited or overfished. Management of fisheries in the region is often hampered by lack of information on the status of fisheries in terms of biological, social, economic, policy and governance aspects. This regional project documents an alarming decline on coastal fishery resources, based on historic research surveys in South and Southeast Asia. Socio-economic analyses and policy reviews highlight the importance of the fisheries sector but also the challenges facing it. Potential interventions to improve fisheries management in the countries are outlined and defined with environmental, socioeconomic and institutional objectives.

Changing Channels Ellen Propper Mickiewicz, 1999 New in paperback Revised and expanded During the tumultuous 1990s, as Russia struggled to shed the trappings of the Soviet empire, television viewing emerged as an enormous influence on Russian life. The number of viewers who routinely watch the nightly news in Russia matches the number of Americans who tune in to the Super Bowl, thus making TV coverage the prized asset for which political leaders intensely--and sometimes violently--compete. In this revised and expanded edition of *Changing Channels*, Ellen

Mickiewicz provides many fascinating insights, describing the knowing ways in which ordinary Russians watch the news, skeptically analyze information, and develop strategies for dealing with news bias. Covering the period from the state-controlled television broadcasts at the end of the Soviet Union through the attempted coup against Gorbachev, the war in Chechnya, the presidential election of 1996, and the economic collapse of 1998, Mickiewicz draws on firsthand research, public opinion surveys, and many interviews with key players, including Gorbachev himself. By examining the role that television has played in the struggle to create political pluralism in Russia, she reveals how this struggle is both helped and hindered by the barrage of information, advertisements, and media-created personalities that populate the airwaves. Perhaps most significantly, she shows how television has emerged as the sole emblem of legitimate authority and has provided a rare and much-needed connection from one area of this huge, crisis-laden country to the next. This new edition of *Changing Channels* will be valued by those interested in Russian studies, politics, media and communications, and cultural studies, as well as general readers who desire an up-to-date view of crucial developments in Russia at the end of the twentieth century.

The Gun Debate Philip J. Cook, Kristin A. Goss, 2014-04-01 No topic is more polarizing than guns and gun control. From a gun culture that took root early in American history to the mass shootings that repeatedly bring the public discussion of gun control to a fever pitch, the topic has preoccupied citizens, public officials, and special interest groups for decades. The Gun Debate: What Everyone Needs to Know® delves into the issues that Americans debate when they talk about guns. With a balanced and broad-ranging approach, noted economist Philip J. Cook and political scientist Kristin A. Goss thoroughly cover the latest research, data, and developments on gun ownership, gun violence, the firearms industry, and the regulation of firearms. The authors also tackle sensitive issues such as the effectiveness of gun control, the connection between mental illness and violent crime, the question of whether more guns make us safer, and ways that video games and the media might contribute to gun violence. No discussion of guns in the U.S. would be complete without consideration of the history, culture, and politics that drive the passion behind the debate. Cook and Goss deftly explore the origins of the American gun culture and the makeup of both the gun rights and gun control movements. Written in question-and-answer format, the book will

help readers make sense of the ideologically driven statistics and slogans that characterize our national conversation on firearms. This book is a must-read for anyone interested in getting a clear view of the issues surrounding guns and gun policy in America. What Everyone Needs to Know® is a registered trademark of Oxford University Press.
