**Fleeting Memories** Veronika Coltheart,1999 The investigation of what people understand and remember from rapidlypresented sequences of visual stimuli began in the late 1960s. In this book, prominent researchers approach the topic from psychological, neuropsychological, and electrophysiological perspectives. The investigation of what people understand and remember from rapidly presented sequences of visual stimuli began in the late 1960s. In this book prominent researchers approach the topic from psychological, neuropsychological, and electrophysiological perspectives. Specific issues include RSVP (rapid serial visual presentation), attentional blink, repetition blindness, and scene perception. The contributors review recent research on our ability to comprehend and remember pictures of objects and scenes, written words, and sentences when the visual stimuli are presented sequentially at rates of up to ten items per second. In short, the book is about our remarkably developed abilities to understand and remember the contents of very briefly presented material.ContributorsDaphne Bavelier, Veronika Coltheart, Helene Intraub, Nancy Kanwisher, Steven J. Pictures of Poverty Lydia Jakobs,2021-10-26 From Charles Dickens's Oliver Twist to George Sims's How the Poor Live, illustrated accounts of poverty were en vogue in Victorian Britain. Poverty was also a popular subject on the screen, whether in dramatic retellings of well-known stories or in 'documentary' photographs taken in the slums. London and its street life were the preferred setting for George Robert Sims's rousing ballads and the numerous magic lantern slide series and silent films based on them. Sims was a popular journalist and dramatist, whose articles, short stories, theatre plays and ballads discussed overcrowding, drunkenness, prostitution and child poverty in dramatic and heroic episodes from the lives and deaths of the poor. Richly illustrated and drawing from many previously unknown sources, Pictures of Poverty is a comprehensive account of the representation of poverty throughout the Victorian period, whether disseminated in newspapers, illustrated books and lectures, presented on the theatre stage or projected on the screen in magic lantern and film performances. Detailed case studies reveal the intermedial context of these popular pictures of poverty and their mobility across genres. With versatile author George R. Sims as the starting point, this study explores the influence of visual media in historical discourses about poverty and the highly controversial role of the Victorian state in poor relief.

Computer Applications for Handling Legal Evidence, Police Investigation and Case Argumentation Ephraim Nissan,2012-06-15 This book provides an overview of computer techniques and tools — especially from artificial intelligence (AI) — for handling legal evidence, police intelligence, crime analysis or detection, and forensic testing, with a sustained discussion of methods for the modelling of reasoning and forming an opinion about the evidence, methods for the modelling of argumentation, and computational approaches to dealing with legal, or any, narratives. By the 2000s, the modelling of reasoning on legal evidence has emerged as a significant area within the well-established field of AI & Law. An overview such as this one has never been attempted before. It offers a panoramic view of topics, techniques and tools. It is more than a survey, as topic after topic, the reader can get a closer view of approaches and techniques. One aim is to introduce practitioners of AI to the modelling legal evidence. Another aim is to introduce legal professionals, as well as the more technically oriented among law enforcement professionals, or researchers in police science, to information technology resources from which their own respective field stands to benefit. Computer scientists must not blunder into design choices resulting in tools objectionable for legal professionals, so it is important to be aware of ongoing controversies. A survey is provided of argumentation tools or methods for reasoning about the evidence. Another class of tools considered here is intended to assist in organisational aspects of managing of the evidence. Moreover, tools appropriate for crime detection, intelligence, and investigation include tools based on link analysis and data mining. Concepts and techniques are introduced, along with case studies. So are areas in the forensic sciences. Special chapters are devoted to VIRTOPSY (a procedure for legal

medicine) and FLINTS (a tool for the police). This is both an introductory book (possibly a textbook), and a reference for specialists from various quarters.
