The Hexologists Josiah Bancroft,2023-09-26 The first book in a wildly inventive and mesmerizing new fantasy series from acclaimed author Josiah Bancroft where magical mysteries abound and only one team can solve them: The Hexologists. “Bancroft is a magician.” — Madeline Miller, New York Times bestselling author of Circe “Fantastic! The Hexologists fizzles eloquently with wit and elegance, but also has marvelous worldbuilding and an excellent plot - and a central pair of characters who I quite simply love. A cocktail of a book made with the very best champagne.” — Genevieve Cogman, author of The Invisible Library The Hexologists, Iz and Warren Wilby, are quite accustomed to helping desperate clients with the bugbears of city life. Aided by hexes and a bag of charmed relics, the Wilbies have recovered children abducted by chimney-wraiths, removed infestations of barb-nosed incubi, and ventured into the Gray Plains of the Unmade to soothe a troubled ghost. Well-acquainted with the weird, they never shy away from a challenging case. But when they are approached by the royal secretary and told the king pleads to be baked into a cake—going so far as to wedge himself inside a lit oven—the Wilbies soon find themselves embroiled in a mystery that could very well see the nation turned on its head. Their effort to expose a royal secret buried under forty years of lies brings them nose to nose with a violent anti-royalist gang, avaricious ghouls, alchemists who draw their power from a hell-like dimension, and a bookish dragon who only occasionally eats people. Armed with a love toughened by adversity and a stick of chalk that can conjure light from the darkness, hope from the hopeless, Iz and Warren Wilby are ready for a case that will test every spell, skill, and odd magical artifact in their considerable bag of tricks. Bancroft is a wonder as ever! The Hexologists was a joyous delight on every page—buoyantly inventive, witty, poignant, gripping, and deeply satisfying. — Madeline Miller, New York Times bestselling author of Circe “Josiah Bancroft’s imagination will astound you. One of the most inventive fantasy authors out there.” — Fonda Lee, author of the Green Bone Saga “Bancroft has returned to the page in force, deploying his crystal prose and razored wit around a tale that mixes whimsy and threat in equal measure. He's a gift to the genre. — Mark Lawrence, author of The Book That Wouldn't Burn

IBM Problem Determination Tools for z/OS Rufus Credle,Vikram Manchala,Dana Shelton,Kenichi Yoshimura,IBM Redbooks,2013-01-27 IBM® Problem Determination (PD) Tools consists of a core group of IBM products that are designed to work with compilers and run times to provide a start-to-finish development solution for the IT professional. This IBM Redbooks® publication provides you with an introduction to the tools, guidance for program preparation to use with them, an overview of their integration, and several scenarios for their use. If an abend occurs during testing, Fault Analyzer enables the programmer to quickly and easily pinpoint the abending location and optionally, the failing line of code. Many times, this information is all the programmer requires to correct the problem. However, it might be necessary to delve a little deeper into the code to figure out the problem. Debug Tool allows the programmer to step through the code at whatever level is required to determine where the error was introduced or encountered. After the code or data is corrected, the same process is followed again until no errors are encountered. However, volume testing or testing with multiple terminals is sometimes required to ensure real-world reliability. Workload Simulator can be used to perform this type of testing. After all of the tests are completed, running the application by using Application Performance Analyzer can ensure that no performance bottlenecks are encountered. It also provides a baseline to ensure that future enhancements do not introduce new performance degradation into the application. This publication is intended for z/OS® application developers and system programmers.
