Airline Transport Pilot: Complete Note Collection Carsten Borgen,2020-04-02 In its 6th edition, The Airline Transport Pilot: Complete Note Collection book is a culmination of more than 10 years of research and writing. What started out as a personal note collection for my ATPL studies later became a compilation of information benefiting pilots around the world. If you have acquired this book it means you are interested in being the best pilot, you can possibly be. Being the best pilot, requires a continuously never-ending dedication to learning and revising, from the time you first step into the classroom till the day you retire from aviation. "As we aspire to become better and safer, we must never forget the knowledge and skills we have already acquired" - Carsten Borgen You will be familiar with most of the information in this book, but over time that information will slowly fade away. As a professional pilot it is crucial to keep this knowledge sharp but going through all the ATPL subject publications again and again, would be an endless task. This book is written as a quick reference guide to pilots and aviation enthusiasts, in an effort to simplify the process of staying current and revising the theory you have already learned while adding to that knowledge. Using this book you can within a couple of hours revise a complete subject matter. Whether you have acquired this book to remain current or simply to prepare for exams or interviews, this book will stay with you for the rest of your career.

Commercial Pilot's Licence Anneli Christian-Phillips,2013-03-01 Many of those embarking, or considering embarking, on commercial pilot's training have little idea of what they will have to do, as far as flying training is concerned, to get the licence. The Commercial Pilot's Licence aim to dispel some common misconceptions and to tell you in an easy and user-friendly way what you need to know to get a JAA CPL and become a better pilot. An easy, user-friendly guide to all you need to know to get a JAA Commercial Pilot's Licence and become a better pilot.Offers practical advice on the lesson content and concentrates on how to fly the manoeuvres.Illustrated with 26 colour photographs.Anneli Christian-Phillips is a commercial pilot with over three thousand hours' instructional experience.

Formulas for the E6-B Air Navigation Computer Frank Hitchens,2013-06-11 Formulas for the Air Navigation Computer is written for pilots and air navigators at all levels of experience from the novice to the professional. The book is self-help on how to use the E6-B Air Navigation Computer. An E6-B Air Navigation Computer is a circular slide rule with a wind slide on the reverse side. It is dedicated to performing all calculations related to pre-flight planning and in-flight air navigation. Every pilot has an E6-B Air Navigation Computer, which is supplied with a very brief instructional booklet when the E6-B is purchased. However, the booklet only covers a few basic formulas, and many more formulas are required for passing the pilot navigation exams at various levels and, of course, for all operational flying. Obtaining all these different formulas from various sources is time consuming, as this author has discovered over the years. They are not readily available in one book. This is the reason for writing Formulas for the Air Navigation Computer; it is a unique collection of air navigation computer formulas. The formulas are written as they appear when set up on the E6-B Air Navigation Computer. A full description on how to solve each formula is included, along with a worked example and also the methods for using the wind slide to calculate wind triangle and other navigational problems associated with the wind slide. The book is easy to follow by the novice pilot and a convenient reference source for the more experienced pilot. The book is complete with all the formulas a pilot of any level should need to know. It is laid out in a simple way with over 122 formulas and methods, covering Time, Speed & Distance, Air Speed, Altitude Navigation, VNAV, One-in-Sixty Rule, Wind triangle Calculations, Wind Finding methods, Fuel Calculations, Pressure Pattern Navigation and more.
