Combinatorial Image Analysis Jake K. Aggarwal, Reneta P. Barneva, Valentin E. Brimkov, Kostadin N. Koroutchev, Elka R. Korutcheva, 2011-05-13 This volume constitutes the refereed proceedings of the 14th International Workshop on Combinatorial Image Analysis, IWCIA 2011, held in Madrid, Spain, in May 2011. The 25 revised full papers and 13 poster papers presented together with 4 invited contributions were carefully reviewed and selected from 60 submissions. The papers are organized in topical sections such as combinatorial problems in the discrete plane and space related to image analysis; lattice polygons and polytopes; discrete/combinatorial geometry and topology and their use in image analysis; digital geometry of curves and surfaces; tilings and patterns; combinatorial pattern matching; image representation, segmentation, grouping, and reconstruction; methods for image compression; discrete tomography; applications of integer programming, linear programming, and computational geometry to problems of image analysis; parallel architectures and algorithms for image analysis; fuzzy and stochastic image analysis; grammars and models for image or scene analysis and recognition, cellular automata; mathematical morphology and its applications to image analysis; applications in medical imaging, biometrics, and others.

Practical Algorithms for Image Analysis with CD-ROM Lawrence O'Gorman, Michael J. Sammon, Michael Seul, 2008-01-21 This new edition's CD-ROM now has both the source code, and a graphic interface to make it easier to use.

Combinatorial Image Analysis Reneta P. Barneva, Valentin E. Brimkov, Jake K. Aggarwal, 2012-11-14 This volume constitutes the refereed proceedings of the 15th International Workshop on Combinatorial Image Analysis, IWCIA 2012, held in Austin, TX, USA in November 2012. The 23 revised full papers presented were carefully reviewed and selected from numerous submissions. The topics covered include digital geometry, combinatorics in digital spaces, digital curves and surfaces; digital topology grammars, transformation, applications; grammars and models in image analysis; picture transformations, morphologic operations, image segmentation; and discrete tomography, applications.

Image Registration A. Ardeshtir Goshtasby, 2012-01-26 This book presents a thorough and detailed guide to image registration, outlining the principles and reviewing state-of-the-art tools and methods. The book begins by identifying the components of a general image registration system, and then describes the design of each component using various image analysis tools. The text reviews a vast array of tools and methods, not only describing the principles behind each tool and method, but also measuring and comparing their performances using synthetic and real data. Features: discusses similarity/dissimilarity measures, point detectors, feature extraction/selection and homogeneous/heterogeneous descriptors; examines robust estimators, point pattern matching algorithms, transformation functions, and image resampling and blending; covers principal axes methods, hierarchical methods, optimization-based methods, edge-based methods, model-based methods, and adaptive methods; includes a glossary, an extensive list of references, and an appendix on PCA.

The Ethics of Identity Kwame Anthony Appiah, 2023-10-03 A bold vision of liberal humanism for navigating today's complex world of growing identity politics and rising nationalism Collective identities such as race, nationality, religion, gender, and sexuality clamor for recognition and respect, sometimes at the expense of other things we value. To what extent do they constrain our freedom, and to what extent do they enable our individuality? Is diversity of value in itself? Has the rhetoric of human rights been overstretched? Kwame Anthony Appiah draws on thinkers through the ages and across the globe to explore such questions, developing an account of ethics that connects moral obligations with collective allegiances and that takes aim at clichés and received ideas about identity. This classic book takes seriously both the claims of individuality—the task of making a life—and the claims of identity, these large and often abstract social categories through which we define ourselves.

A Beginner's Guide to Blood Cells Barbara J. Bain, 2017-03-13 The third edition of this popular pocket book, *A Beginner's Guide to Blood Cells* written by Professor Barbara Bain, provides a concise introduction to normal and abnormal blood cells and blood counts for trainees in haematology. Includes a brand new chapter on emergency morphology, designed to make the clinical significance and urgency of certain laboratory findings clear for biomedical scientists and to assist trainee haematologists in the recognition of major clinically important abnormalities Contains exceptional full colour images throughout Introduces important basic concepts of hematology, setting haematological findings in a clinical context Provides a fully updated self-assessment section An essential resource for trainee haematologists, biomedical scientists, and biomedical science and medical students

Text Analysis with R Matthew L. Jockers, Rosamond Thalken, 2020-03-30 Now in its second edition, *Text Analysis with R* provides a practical introduction to computational text analysis using the open source programming language R. R is an extremely popular programming language, used throughout the sciences; due to its accessibility, R is now used increasingly in other research areas. In this volume, readers immediately begin working with text, and each chapter examines a new technique or process, allowing readers to obtain a broad exposure to core R procedures and a fundamental understanding of the possibilities of computational text analysis at both the micro and the macro scale. Each chapter builds on its predecessor as readers move from small scale “microanalysis” of single texts to large scale “macroanalysis” of text corpora, and each concludes with a set of practice exercises that reinforce and expand upon the chapter lessons. The book's focus is on making the technical palatable and making the technical useful and immediately gratifying. *Text Analysis with R* is written with students and scholars of literature in mind but will be applicable to other humanists and social scientists wishing to extend their methodological toolkit to include quantitative and computational approaches to the study of text. Computation provides access to information in text that readers simply cannot gather using traditional qualitative methods of close reading and human synthesis. This new edition features two new chapters: one that introduces dplyr and tidyr in the context of parsing and analyzing dramatic texts to extract speaker and receiver data, and one on sentiment analysis using the syuzhet package. It is also filled with updated material in every chapter to integrate new developments in the field, current practices in R style, and the use of more efficient algorithms.

Emblematics in Hungary Éva Knapp, Gábor Tüskés, 2012-10-25 The main aim of the work is to present emblematics in Hungary in its European context, and to show the reciprocal influence between that phenomenon and mainstream literature. The description of the theoretical and historical development in Hungary is supplemented by a series of case studies examining the effect of emblematics upon various literary genres. The final chapter analyzes the link between literary emblematics and the visual arts by looking at a specific example. As in most European countries, emblematics in Hungary is part of a complex labyrinth of literary modes of thought and expression. A relative poverty of theoretical writing went hand in hand with a considerable range of emblematic practice. The emblem proved to be a transitional form between the period when signs and motifs were regarded as having specific and fixed meanings and the modern period when we have developed a different and shifting concept of language and meaning. At the same time as emblems began to penetrate the more popular levels of national culture and literature, they also became more specialized. Hungarian emblematics used, for the most part, existing pictorial and textual combinations of pictures and texts. They employed the emblem notably in genres and texts of the genus demonstrativum, which referred to matters which were topical at the time.

Post-harvest Deterioration of Cassava J. E. Wenham, Food and Agriculture Organization of the United Nations, 1995

Cassava R. J. Hillocks, J. M. Thresh, Anthony Bellotti, 2002 Cassava is a major tropical tuber crop found throughout the tropics (India, Oceania, Africa and Latin America). Hitherto, there has been no single text covering all aspects of cassava biology, production and utilization. This book fills that gap, representing the first comprehensive research level overview of this main staple crop. Chapters are written by leading experts in this field from all continents. The book is suitable for those working and researching in cassava, in both developed and developing countries, as well as advanced students.

Radiant Textuality J. McGann, 2016-04-30 This book describes and explains the fundamental changes that are now taking place in the most traditional areas of humanities theory and method, scholarship and education. The changes flow from the re-examination of the very foundations of the humanities – its theories of textuality and communication – that are being forced by developments in information technology. A threshold was crossed during the last decade of the twentieth century with the emergence of the World Wide Web, which has (1) globalized access to computerized resources and information, and (2) made interface and computer graphics paramount concerns for work in digital culture. While these changes are well known, their consequences are not well understood, despite so much discussion by digital enthusiasts and digital doomsters alike. In reconsidering these matters, *Radiant Textuality* introduces some remarkable new proposals for integrating computerized tools into the central interpretative and critical activities of traditional humanities disciplines, and of literary studies in particular.

Digital History Daniel Cohen, Roy Rosenzweig, 2006 Selected by Choice magazine as an Outstanding Academic Title Digital History: A Guide to Gathering, Preserving, and Presenting the Past on the Web provides for the first time a plainspoken and thorough introduction to the web for historians—teachers and students, archivists and museum curators, professors as well as amateur enthusiasts—who wish to produce online historical work or to build upon and improve the projects they have already started in this important new medium. The book takes the reader step by step through planning a project, understanding the technologies involved and how to choose the appropriate ones, designing a site that is both easy to use and scholarly, digitizing materials in a way that makes them web-friendly while preserving their historical integrity, and reaching and responding to an intended audience effectively. It also explores the repercussions of copyright law and fair use for scholars in a digital age and examines more cutting-edge web techniques involving interactivity, such as sites that use the medium to solicit and collect historical artifacts. Finally, the book provides basic guidance for ensuring that the digital history the reader creates will not disappear in a few years. Throughout, Digital History maintains a realistic sense of the advantages and disadvantages of putting historical documents, interpretations, and discussions online. The authors write in a tone that makes Digital History accessible to those with little knowledge of computers, while including a host of details that more technically savvy readers will find helpful. And although the book focuses particularly on historians, those working in related fields in the humanities and social sciences will also find this to be a useful introduction. Digital History builds upon more than a decade of experience and expertise in creating pioneering and award-winning work by the Center for History and New Media at George Mason University.

Advances in Plant Biotechnology D.D.Y. Ryu, Shintaro Furusaki, 2012-12-02 This volume, contributed to by a group of 46 research scientists and engineers, focuses on the integration of two aspects of plant biotechnology – the basic plant science and applied bioprocess engineering. Included in this book are 17 chapters, each dealing with specific topics of current interest with three coherent themes of: plant gene expression, regulation and manipulation; plant cell physiology and metabolism and their regulation; and bioprocess engineering and bioreactor performance of plant cell cultures. All of these topics are integrated into a main theme of enabling plant biotechnology relevant to the production of secondary metabolites. This book will be of great value to all plant cell biologists and molecular geneticists, and all those interested in the integration of plant science and bioprocess engineering for development of enabling technology relevant to the production of plant secondary metabolites.
