RNA and DNA Diagnostics Volker A. Erdmann, Stefan Jurga, Jan Barciszewski, 2015-06-10 The aim of molecular diagnostics is preferentially to detect a developing disease before any symptoms appear. There has been a significant increase, fueled by technologies from the human genome project, in the availability of nucleic acid sequence information for all living organisms including bacteria and viruses. When combined with a different type of instrumentation applied, the resulting diagnostics is specific and sensitive. Nucleic acid-based medical diagnosis detects specific DNAs or RNAs from the infecting organism or virus and a specific gene or the expression of a gene associated with a disease. Nucleic acid approaches also stimulate a basic science by opening lines of inquiry that will lead to greater understanding of the molecules at the center of life. One can follow Richard Feynman's famous statement "What I cannot create, I do not understand."

Biomonitoring and Biomarkers as Indicators of Environmental Change 2 Frank M. Butterworth, Amara Gunatilaka, María Eugenia Gonsébat, 2001-01-31 Monitoring the environment is absolutely essential if we are to identify hazards to human health, to assess environmental cleanup efforts, and to prevent further degradation of the ecosystem. Biomonitoring and biomarkers combined with chemical monitoring offer the only approach to making these assessments. Based on an International Association of Great Lakes Research conference, this book is intended for researchers who want to incorporate new and different technologies in their development of specifically-crafted monitors; students who are learning the field of biomonitoring; and regulatory agencies that want to consider newer technologies to replace inadequate and less powerful test regimes.

Bioactive Food as Dietary Interventions for Liver and Gastrointestinal Disease Ronald Ross Watson, Victor R. Preedy, 2012-10-23 Optimum functioning of the liver in conjunction with the gastrointestinal system is critical for health. They are critical for the digestion and absorption of nutrients and foods to produce growth. Nutrients and non-nutrients are important modulators of the liver function. The symptoms related to liver dysfunction include both physical signs and symptoms of abnormal absorption of fat, changes in blood sugar, and altered metabolism. Bioactive Food as Dietary Interventions for Liver and Gastrointestinal Disease provides evidence that foods and their compounds can modify some liver and gastrointestinal diseases--P. [4] of cover.

Molecular Genetic Testing in Surgical Pathology John D. Pfeifer, 2006 Written by experts from Washington University School of Medicine, this text is a thorough review of the specific molecular genetic techniques that can provide diagnostically useful molecular genetic information on tissue samples—including cytogenetics, fluorescence in situ hybridization (FISH), PCR, electrophoresis and hybridization analysis, DNA sequence analysis, and microarrays. The first part of the book describes each technique, indicates its advantages, disadvantages, capabilities, and limitations, and systematically addresses sensitivity and specificity issues. Subsequent chapters, organized by organ system, detail the specific applications of these

tests in surgical pathology. More than 150 full-color and black-and-white illustrations complement the text.

Alternative Methodologies for the Safety Evaluation of Chemicals in the Cosmetic Industry Nicola Loprieno, 1995-08-01 The international cosmetic industry is a highly self-regulated industry that provides quality products with a remarkable absence of toxicity. Specific European Union directives raise the need for quality in vitro methods to yet a new level. These directives will force new practices for safety evaluation of personal care products throughout the world in just a few years. *Alternative Methodologies for the Safety Evaluation of Chemicals in the Cosmetic Industry* presents a categorization and collection of information available for the evaluation of safety using in vitro techniques. It offers a comprehensive and complete look at the entire field. In doing so, the author provides the foundation for the next phase of significant growth for this discipline. Readers will be able to find information easily throughout the book. The author uses outlines and tables to provide details in a ready format. He puts his unique expertise and insight to paper and offers a valuable and comprehensive look at the field. The book begins with an excellent history of the approach of the European Union. Because of Loprieno's intimate knowledge of the subject, the reader receives a solid understanding of the developments that resulted in legislation. Chapters are filled with important quotes, individual methods, how various aspects of the field were developed, and important crossroads in research. The book ends with an in-depth look at the Galileo Data Base. *Alternative Methodologies for the Safety Evaluation of Chemicals in the Cosmetic Industry* is extremely useful, not only now, but also as more advanced and significant developments occur during the next decade. It is a must-have resource for anyone interested in this field.

Breast Cancer 4 William L. McGuire, 2012-12-06 This is the fourth book in a series dealing with breast cancer. Volumes 1-3 were concerned with treatment, experimental biology, and a number of varied timely topics. The present volume continues to review the breast cancer field in the broadest sense. The first chapter addresses the question of selecting appropriate chemotherapy for the patient. In the 1970s, great advances were seen in our ability to achieve objective tumor regression with empirical combinations of chemotherapeutic agents. The next decade will focus on precise methods to select those agents likely to have the greatest benefit in individual patients. Livingston has provided us with a thorough review of the current state of the art. We have known for some time that steroid hormone receptor assays of considerable value to clinicians caring for patients with advanced disease. Osborne and colleagues now present considerable arguments that receptor assays are also useful in the setting of primary breast cancer for purposes of both prognosis and treatment strategy. A very important clinical problem which has received little attention in the research laboratory is benign breast disease. If one inquires about the medical therapy of this disorder in the United States, it is obvious that the majority of physicians would appreciate a better understanding of the pathophysiology which might lead to improved therapies. Mauvais-Jarvis and co-workers provide us with such an account from their wide experience.
