EGO-1, an Essential Caenorhabditis Elegans RNA-directed RNA Polymerase, Modulates Gene Expression Through the Messenger RNA-templated Production of Short Antisense Effector RNAs Jay Mahesh Maniar, 2010 The development of the germline in *Caenorhabditis elegans* is a complex process involving the regulation of thousands of genes in a coordinated manner. These genes must direct the regulation of cell proliferation, meiosis, and sex determination, as well as gamete formation and fertilization. Several genes required for small RNA biogenesis and function are also required for the proper organization and development of the germline. EGO-1 is a putative RNA-directed RNA polymerase (RdRP) that is required for *C. elegans* germ-line development and efficient RNAi of germ-line expressed genes. Additionally, ego-1 mutants have been shown to exhibit defects in heterochromatin assembly on unpaired DNA and proper chromosome segregation during meiosis. Despite our understanding of the morphology of ego-1 mutant worms, it has remained unclear how the loss of a putative RdRP can cause such dramatic phenotypes in the *C. elegans* germline. That is, what role does EGO-1 play in promoting the development of the germline? There is strong evidence for the requirement of the *C. elegans* RdRP RRF-3 in producing endogenous small RNAs that target mRNA produced from specific genes. Additionally, there is evidence that EGO-1 may interact directly with chromatin. The questions become what target (or perhaps targets) is being disrupted in the ego-1 mutant and are they being disrupted at the chromatin or RNA level? Using high-throughput small RNA and messenger RNA sequencing we found that EGO-1 is required to produce small RNAs antisense to a number of germline-expressed genes through several developmental stages. We found that these genes fall into several classes including genes required for kinetochore (klp-7) and nuclear

pore (npp-3) assembly, as well as the production of histone-modifying (set-21) and centromeric proteins (hcp-3). We also found several RNAi-related genes to be targets of EGO-1 (csr-1, mut-14, mut-16, prg-1, tsn-1). Finally, we show a strong correlation between the loss of small RNAs and the rise of mRNA levels in ego-1(-) animals.

Barcode Jordan Frith, 2023-11-02 Object Lessons is a series of short, beautifully designed books about the hidden lives of ordinary things. Barcodes are about as ordinary as an object can be. Billions of them are scanned each day and they impact everything from how we shop to how we travel to how the global economy is managed. But few people likely give them more than a second thought. In a way, the barcode's ordinariness is the ultimate symbol of its success. However, behind the mundanity of the barcode lies an important history. Barcodes bridged the gap between physical objects and digital databases and paved the way for the contemporary Internet of Things, the idea to connect all devices to the web. They were highly controversial at points, protested by consumer groups and labor unions, and used as a symbol of dystopian capitalism and surveillance in science fiction and art installations. This book tells the story of the barcode's complicated history and examines how an object so crucial to so many parts of our lives became more ignored and more ordinary as it spread throughout the world. Object Lessons is published in partnership with an essay series in The Atlantic.

Life at Swift Water Place Doug D. Anderson, Wanni W. Anderson, 2019-06-15 This is a multidisciplinary study of the early contact period of Alaskan Native history that follows a major hunting and fishing Inupiaq group at a time of momentous change in their lifeways. The Amilgaqtau yaagmiut were the most powerful group in the Kobuk River area. But their status was forever transformed thanks to two major factors. They faced a food shortage prompted by the decline in caribou, one of their major foods. This was also the time when European and Asian trade items were first introduced into their traditional society. The first trade items to arrive, a decade ahead of the Europeans themselves, were glass beads and pieces of metal that the Inupiat expertly incorporated into their traditional implements. This book integrates ethnohistoric, bio-anthropological, archaeological, and oral historical analyses.
