

Planet Defender 10

Jason Youngdale

Planetary Defense Nikola Schmidt,2018-12-26 Planetary defense from near-Earth objects such as asteroids is a far more nuanced and challenging topic than it might seem. Each day, technology is making it easier to detect asteroid impact threats in advance, but at present, there is still no easy way to design and implement any form of global defense. This book examines how various asteroid deflection methods can change global political affairs. The authors believe that the final policy for potential Earth impacts should be based on practical engineering solutions and innovative architectural structures, while at the same time reflecting the most recent political science contributions in ethical security studies and security cosmopolitanism. Their focus is not limited to effective engineering solutions, but rather extends to how such proposals resonate in possible political structures of the future. Planetary defense cannot be achieved with technology alone; the chapters in this volume highlight the issues that arise when space science and technology intersect with political science. This complex interdisciplinary project not only demands global participation and collaboration, but also proposes the way we can achieve it. The authors explore various concepts of governance and their far-reaching implications for planetary defense and vice versa—how scientific progress in Solar System observations and asteroid collision engineering influence political science and put pressure on the international legal framework. The text is intentionally written for a diverse scholarly and diplomatic audience in a style accessible to non-specialists and practitioners and can be read by those across diverse disciplinary backgrounds.

Planetary Defense Legacy for a Certain Future ,1998 The threat to Earth due to the impact of an Earth-crossing asteroid or comet is not new, but scientists have only recently recognized it as a continuing threat. The past ten years reveal several frightening near misses, and hits by bodies too small to survive long enough in the atmosphere to cause damage. The hazard created when an object strikes Earth varies greatly, from a minimum of no damage due to the object's destruction in the atmosphere to a maximum of millions of deaths, extinction of species, and an end to present civilization. While the potential hazard is great, the probability of occurrence is low, but an impact will happen; the only question is when. Technology exists to deal with this threat, but serious, organized effort to identify potential threatening objects and to deflect threatening objects is virtually nonexistent. This paper analyzes planetary defense issues and develops seven recommendations for national policy and near term actions to be taken by the United States to develop and implement a system to defend Earth from potential impact by comets and asteroids.

Homeplanet Defense Martin A. Schwab,2014-05 Constructing a global currency based on the generation of knowledge can better tap abundant energy sources and the productive power of the human spirit. By exploring new worlds, nations can finally achieve an active peace on Earth. Homeplanet Defense calls for preempting multiple threats to the human family through space-based strategies, aided by the vast resources and expertise in all military industrial complexes - transformed into explorative information networks. This work adds to an ongoing paradigm shift toward a new realism in the practice and study of international relations, to protect the global chessboard multilaterally rather than to dominate it unilaterally or through alliances. This small book is packed dense with new ideas and concepts. It is best read slowly, one section at a time whether one is already a leader of positive change, a student or a global citizen who is discontent with the way the world works now.

Legal Aspects of Planetary Defence Irmgard Marboe,2021-09-27 Impacts by asteroids or comets on Earth may lead to natural disasters of catastrophic dimensions. This book addresses legal and policy aspects of 'planetary defence' activities by space agencies and other actors aiming at the prediction and mitigation of Near-Earth Objects (NEOs).

Planetary Emergencies K Goebel,1992-08-29 This series started in 1981 with the Erice Seminars when the danger of a nuclear East-West confrontation was menacing the world. The volumes reproduce the crucial steps, from the Nuclear Winter to the Strategic Defense Initiative. After the collapse of the U.S.S.R., new emergencies are now to be faced such as the danger of proliferation of Weapons for Mass Destruction (WMD), the North-South confrontation on ecological problems and the new deal for Science and Technology to help developing countries in their struggle for a better standard of life. The Erice Seminars have attracted the attention of world leaders in Science, Technology and Culture. Space and Defense Policy Damon Coletta,Frances T. Pilch,2013-05-13 This edited volume introduces the reader to the role of space in military and

defense strategy, and outlines some of the major foreign and domestic actors in the space arena, as well as constraints of law and treaties on activities in space. It also addresses science and technology as they relate to space policy. The book addresses three main questions: How does the realm of space fit into strategic thinking about national security? How does policy regarding space develop and what considerations, both in the United States and abroad, figure prominently in calculations about space policy? How do different states/nations/actors regard the role of space in their national security calculations and how do these policies impact each other? This book fills a niche in the space policy field, providing insights into space and strategy from international experts from the military, academic and scientific communities. A unique feature of the book is the chapter on science and technology, which utilizes the latest information available concerning space utilization and exploration.
