Means Mechanical Estimating Methods: Takeoff & Pricing for HVAC & Plumbing, Updated 4th Edition Melville Mossman, 2007-08-23 An easy-to-use tool for estimating heating, ventilating, and air conditioning systems, with up-to-date cost data and estimating examples. This all-in-one reference gives you the accepted standards and procedures for takeoff and pricing HVAC systems, as well as piping, plumbing, and fire protection. Includes all of the major mechanical systems in new building construction. The book will show you how to: Evaluate mechanical plans and specs so you can estimate all cost components Measure, quantify, and perform takeoffs for materials, labor, and equipment Identify and correctly apply direct and indirect costs, including overhead and profit Use forms to improve accuracy and efficiency - with electronic forms now available on the book's own website Compare materials and methods and select the most cost-effective way to get the job done Train new estimators with clear instructions for estimating the mechanical trades Make the best use of RSMeans Mechanical Cost Data and RSMeans Plumbing Cost Data Organized for easy reference, the book gives you quick access to whatever aspect of mechanical estimating you need. It includes a glossary of mechanical terms and definitions - plus symbols used on mechanical plans, useful formulas, checklists, and conversion tables.

Using Maplex for ArcGIS Bob Booth, Esri Press, 2004 This book is a reference for users of ESRI Maplex for ArcGIS, an extension to the suite of integrated applications in the ArcGIS Desktop products ArcInfo, ArcEditor, and ArcView and is used to design and create publication-quality cartographic labels for maps. Maplex for ArcGIS lets you control how labels should be placed relative to features; how labels may be modified or reduced to allow more placements when the available space is constrained; and how conflicts between labels may be resolved. The labels you create using Maplex for ArcGIS can be converted to annotation and shared and edited in a geodatabase. Using Maplex for ArcGIS shows you how to put the software to work immediately. Both beginners to using labels in geographic information systems (GIS) and advanced users will find that this book makes it easy to identify and execute tasks whether basic or advanced. Begin with the quick-start tutorial for an overview of what you can do with Maplex for ArcGIS, and refine the labeling of a map. If you prefer, jump right in and experiment on your own. The book also includes concise, step-by-step, fully illustrated examples.

The Hierarchy of Energy in Architecture Ravi Srinivasan,Kiel Moe,2015-06-12 The laws of thermodynamics—and their implications for architecture—have not been fully integrated into architectural design. Architecture and building science too often remain constrained by linear concepts and methodologies regarding energy that occlude significant quantities and qualities of energy. *The Hierarchy of Energy in Architecture* addresses this situation by providing a clear overview of what energy is and what architects can do with it. Building on the emergy method pioneered by systems ecologist Howard T. Odum, the authors situate the energy practices of architecture within the hierarchies of energy and the thermodynamics of the large, non-equilibrium, non-linear energy systems that drive buildings, cities, the planet and universe. Part of the PocketArchitecture series, the book is divided into a fundamentals section, which introduces key topics and the emergy methodology, and an applications section, which features case studies applying emergy to various architectural systems. The book provides a concise but rigorous exposure to the system boundaries of the energy systems related to buildings and as such will appeal to professional architects and architecture students.

Analysis and Simulation of Electrical and Computer Systems Damian Mazur,Marek Gołębiowski,Mariusz Korkosz,2018-08-31 This book addresses selected topics in electrical engineering, electronics and mechatronics that have posed serious challenges for both the scientific and engineering communities in recent years. The topics covered range from mathematical models of electrical and electronic components and systems, to simulation tools implemented for their analysis and further developments; and from multidisciplinary optimization, signal processing methods and numerical results, to control and diagnostic techniques. By bridging theory and practice in the modeling, design and optimization of electrical, electromechanical and electronic systems, and by adopting a multidisciplinary perspective, the book provides researchers and practitioners with timely and extensive information on the state of the art in the field — and a source of new, exciting ideas for further developments and collaborations. The book presents selected results of the XIII Scientific Conference on Selected Issues of Electrical Engineering and Electronics (WZEE

2016), held on May 04–08, 2016, in Rzeszów, Poland. The Conference was organized by the Rzeszów Division of Polish Association of Theoretical and Applied Electrical Engineering (PTETiS) in cooperation with the Faculty of Electrical and Computer Engineering of the Rzeszów University of Technology.

IEEE Recommended Practice for Calculating Short-Circuit Currents in Industrial and Commercial Power Systems ,2006-01-01 This recommended practice provides short-circuit current information including calculated short-circuit current duties for the application in industrial plants and commercial buildings, at all power system voltages, of power system equipment that senses, carries, or interrupts short-circuit currents.

Working Toward Sustainability Charles J. Kibert, Martha C. Monroe, Anna L. Peterson, Richard R. Plate, Leslie Paul Thiele, 2011-09-28 A comprehensive introduction to the ethics of sustainability for empowering professionals and practitioners in many different fields By building the framework for balancing technological developments with their social and environmental effects, sustainable practices have grounded the vision of the green movement for the past few decades. Now deeply rooted in the public conscience, sustainability has put its stamp on various institutions and sectors, from national to local governments, from agriculture to tourism, and from manufacturing to resource management. But until now, the technological sector has operated without a cohesive set of sustainability principles to guide its actions. *Working Toward Sustainability* fills this gap by empowering professionals in various fields with an understanding of the ethical foundations they need to promoting and achieving sustainable development. In addition, *Working Toward Sustainability*: Offers a comprehensive introduction to the ethics of sustainability for those in the technical fields whether construction, engineering, resource management, the sciences, architecture, or design Supports nine central principles using case studies, exercises, and instructor material Includes illustrations throughout to help bring the concepts to life By demonstrating that sustainable solutions start with ethical choices, this groundbreaking book helps professionals in virtually every sector and field of endeavor work toward sustainability.

Construction Ecology Charles J. Kibert, Jan Sendzimir, G. Bradley Guy, 2003-08-27 Industrial ecology provides a sound means of systematising the various ideas which come under the banner of sustainable construction and provides a model for the design, operation and ultimate disposal of buildings.

Mechanics of Materials James M. Gere, Stephen Timoshenko, 1999 This is a revised edition emphasising the fundamental concepts and applications of strength of materials while intending to develop students' analytical and problem-solving skills. 60% of the 1100 problems are new to this edition, providing plenty of material for self-study. New treatments are given to stresses in beams, plane stresses and energy methods. There is also a review chapter on centroids and moments of inertia in plane areas; explanations of analysis processes, including more motivation, within the worked examples.

Reshaping the Built Environment Charles J. Kibert, 1999-05 This volume presents the thinking of leading academics and professionals in planning, civil engineering, economics, architecture, construction, and a host of other fields who are seeking to discover ways of creating a more sustainable built environment.

Structures or Why things don't fall down J. Gordon, 2012-02-07 I am very much aware that it is an act of extreme rashness to attempt to write an elementary book about structures. Indeed it is only when the subject is stripped of its mathematics that one begins to realize how difficult it is to pin down and describe those structural concepts which are often called 'elementary'; by which I suppose we mean 'basic' or 'fundamental'. Some of the omissions and oversimplifications are intentional but no doubt some of them are due to my own brute ignorance and lack of understanding of the subject. Although this volume is more or less a sequel to *The New Science of Strong Materials* it can be read as an entirely separate book in its own right. For this reason a certain amount of repetition has been unavoidable in the earlier chapters. I have to thank a great many people for factual information, suggestions and for stimulating and sometimes heated discussions. Among the living, my colleagues at Reading University have been generous with help, notably Professor W. D. Biggs (Professor of Building Technology), Dr Richard Chaplin, Dr Giorgio Jeronimidis, Dr Julian Vincent and Dr Henry Blyth; Professor Anthony Flew, Professor of Philosophy, made useful suggestions about the last chapter. I am also grateful to Mr John Bartlett, Consultant Neurosurgeon at the Brook Hospital. Professor T. P. Hughes of the University of the West Indies has been helpful about rockets and many other things besides. My secretary, Mrs Jean Collins, was a great help in times of trouble. Mrs Nethercot of Vogue was kind to me about dressmaking. Mr Gerald Leach and also many of the editorial staff of Penguins have exercised their accustomed patience and helpfulness. Among the dead, I owe a great deal to Dr Mark Pryor - lately of Trinity College, Cambridge - especially for discussions about biomechanics which extended over a period of nearly thirty years. Lastly, for reasons which must surely be obvious, I owe a humble oblation to Herodotus, once a citizen of Halicarnassus.
