Local Food Systems; Concepts, Impacts, and Issues Steve Martinez,2010-11 This comprehensive overview of local food systems explores alternative definitions of local food, estimates market size and reach, describes the characteristics of local consumers and producers, and examines early indications of the economic and health impacts of local food systems. Defining ¿local¿ based on marketing arrangements, such as farmers selling directly to consumers at regional farmers¿ markets or to schools, is well recognized. Statistics suggest that local food markets account for a small, but growing, share of U.S. agricultural production. For smaller farms, direct marketing to consumers accounts for a higher percentage of their sales than for larger farms. Charts and tables.

China's New Place in a World in Crisis Ross Garnaut,Ligang Song,Wing Thye Woo,2009-07-01 The world and China's place in it have been transformed over the past year. The pressures for change have come from the most severe global financial crisis ever. The crisis has accelerated China's emergence as a great power. But China and its global partners have yet to think or work through the consequences of its new position for the governance of world affairs. China's New Place in a World in Crisis discusses and provides in-depth analysis of the following questions. How have China's growth prospects been affected by the global crisis? How will the crisis and China's response to it impact China's major domestic issues, such as industrialisation, urbanisation and the reform of the state-owned sector of the economy? How will the crisis and the international community's response to it affect the rapidly emerging new international order? What will be China's, and other major developing countries', new role? Can China and the world find a way of breaking the nexus between economic growth and environmental sustainability - especially on the issue of climate change?

The Ocean and Cryosphere in a Changing Climate Intergovernmental Panel on Climate Change (IPCC),2022-05-19 The Intergovernmental Panel on Climate Change (IPCC) is the leading international body for assessing the science related to climate change. It provides policymakers with regular assessments of the scientific basis of human-induced climate change, its impacts and future risks, and options for adaptation and mitigation. This IPCC Special Report on the Ocean and Cryosphere in a Changing Climate is the most comprehensive and up-to-date assessment of the observed and projected changes to the ocean and cryosphere and their associated impacts and risks, with a focus on resilience, risk management response options, and adaptation measures, considering both their potential and limitations. It brings together knowledge on physical and biogeochemical changes, the interplay with ecosystem changes, and the implications for human communities. It serves policymakers, decision makers, stakeholders, and all interested parties with unbiased, up-to-date, policy-relevant information. This title is also available as Open Access on Cambridge Core.

China, 1898-1912 Douglas R. Reynolds,2020-04-06 Challenging most accounts of China's revolutionary transformation at the turn of the century, Douglas Reynolds argues that the political toppling of the Qing dynasty in 1911 was less important than the Xinzheng or New System reforms of the late-Qing government itself. He then provides a detailed account of the debt those reforms owed to Japan. For the Chinese, Japan offered models for major modern institutions; training for administrators, military officers and modern police; a shortcut to Western knowledge through translations from the Japanese; a ready-made modern vocabulary using Kanji or Chinese characters; and advisers and instructors in many fields. After establishing the broad areas in which China

underwent a lasting and peaceful revolution during a Golden Decade of beneficial relations with its island neighbour, Reynolds recounts the activities of Chinese students in Japan and those of Japanese teachers and advisers in China. He examines the effect of translations from the Japanese on textbooks and general publishing; and outlines Chinese borrowings from Japanese Western-style institutions in education, the military, police and prisons, modern law, the judiciary, and constitutional government.

Neurogenesis and Neural Plasticity Catherine Belzung, Peter Wigmore, 2014-07-08 This volume brings together authors working on a wide range of topics to provide an up to date account of the underlying mechanisms and functions of neurogenesis and synaptogenesis in the adult brain. With an increasing understanding of the role of neurogenesis and synaptogenesis it is possible to envisage improvements or novel treatments for a number of diseases and the possibility of harnessing these phenomena to reduce the impact of ageing and to provide mechanisms to repair the brain.

Prosperity without Growth Tim Jackson, 2016-12-08 What can prosperity possibly mean in a world of environmental and social limits? The publication of *Prosperity without Growth* was a landmark in the sustainability debate. Tim Jackson's piercing challenge to conventional economics openly questioned the most highly prized goal of politicians and economists alike: the continued pursuit of exponential economic growth. Its findings provoked controversy, inspired debate and led to a new wave of research building on its arguments and conclusions. This substantially revised and re-written edition updates those arguments and considerably expands upon them. Jackson demonstrates that building a 'post-growth' economy is a precise, definable and meaningful task. Starting from clear first principles, he sets out the dimensions of that task: the nature of enterprise; the quality of our working lives; the structure of investment; and the role of the money supply. He shows how the economy of tomorrow may be transformed in ways that protect employment, facilitate social investment, reduce inequality and deliver both ecological and financial stability. Seven years after it was first published, *Prosperity without Growth* is no longer a radical narrative whispered by a marginal fringe, but an essential vision of social progress in a post-crisis world. Fulfilling that vision is simply the most urgent task of our times.

General Lattice Theory G. Grätzer, 2012-12-06 In the first half of the nineteenth century, George Boole's attempt to formalize propositional logic led to the concept of Boolean algebras. While investigating the axiomatics of Boolean algebras at the end of the nineteenth century, Charles S. Peirce and Ernst Schröder found it useful to introduce the lattice concept. Independently, Richard Dedekind's research on ideals of algebraic numbers led to the same discovery. In fact, Dedekind also introduced modularity, a weakened form of distributivity. Although some of the early results of these mathematicians and of Edward V. Huntington are very elegant and far from trivial, they did not attract the attention of the mathematical community. It was Garrett Birkhoff's work in the mid-thirties that started the general development of lattice theory. In a brilliant series of papers he demonstrated the importance of lattice theory and showed that it provides a unifying framework for hitherto unrelated developments in many mathematical disciplines. Birkhoff himself, Valere Glivenko, Karl Menger, John von Neumann, Oystein Ore, and others had developed enough of this new field for Birkhoff to attempt to sell it to the general mathematical community, which he did with astonishing success in the first edition of his *Lattice Theory*. The further development of the subject matter can best be followed by comparing the first, second, and third editions of his book (G. Birkhoff [1940], [1948], and [1967]).

Dynamics of Mechanical Systems with Variable Mass Hans Irschik, Alexander K. Belyaev, 2014-10-16 The book presents up-to-date and unifying formulations for treating dynamics of different types of mechanical systems with variable mass. The starting point is overview of the continuum mechanics relations of balance and jump for open systems from which extended Lagrange and Hamiltonian formulations are derived. Corresponding approaches are stated at the level of analytical mechanics with emphasis on systems with a position-dependent mass and at the level of structural mechanics. Special emphasis is laid upon axially moving structures like belts and chains

and on pipes with an axial flow of fluid. Constitutive relations in the dynamics of systems with variable mass are studied with particular reference to modeling of multi-component mixtures. The dynamics of machines with a variable mass are treated in detail and conservation laws and the stability of motion will be analyzed. Novel finite element formulations for open systems in coupled fluid and structural dynamics are presented.

Draining development? Peter Reuter, 2012-02-01 A growing concern among those interested in economic development is the realization that hundreds of billions of dollars are illicitly flowing out of developing countries to tax havens and other financial centers in the developed world. This volume assesses the dynamics of these flows, much of which is from corruption and tax evasion.

Fluxes of Carbon, Water and Energy of European Forests Riccardo Valentini, 2013-06-29 After years of technological development and its important achievements to make our life easier and more comfortable, human society is going to face one of the most difficult challenges of the last century: to stabilize the concentration levels of greenhouse gases in the atmosphere to prevent harmful effects on the climate system. Through a delicate balance between photosynthesis and respiration, terrestrial ecosystems, and in particular forests, are today thought to take up a significant part of the carbon dioxide emissions in the atmosphere, sometimes called the terrestrial carbon sink. However, the location, magnitude, and vulnerability of the carbon dioxide sink of the terrestrial biota are still uncertain. The suite of traditional tools in an ecologist's toolbox for studying ecosystem productivity and carbon balance include leaf cuvettes, whole-plant and soil chambers for gas exchange, and biomass and soil carbon inventories. While each of the cited methods has distinct advantages, they are limited with regards to their ability to measure net carbon dioxide exchange of the whole ecosystem across a variety of time scales. This book presents a compendium of results of a European project (EURO FLUX), funded by the European Commission through its fourth framework program, aiming to elucidate the role of forests in continental carbon balance.

Supreme Court Decision-Making Cornell W. Clayton, Howard Gillman, 1999 What influences decisions of the U.S. Supreme Court? For decades social scientists focused on the ideology of individual justices. *Supreme Court Decision Making* moves beyond this focus by exploring how justices are influenced by the distinctive features of courts as institutions and their place in the political system. Drawing on interpretive-historical institutionalism as well as rational choice theory, a group of leading scholars consider such factors as the influence of jurisprudence, the unique characteristics of supreme courts, the dynamics of coalition building, and the effects of social movements. The volume's distinguished contributors and broad range make it essential reading for those interested either in the Supreme Court or the nature of institutional politics. Original essays contributed by Lawrence Baum, Paul Brace, Elizabeth Bussiere, Cornell Clayton, Sue Davis, Charles Epp, Lee Epstein, Howard Gillman, Melinda Gann Hall, Ronald Kahn, Jack Knight, Forrest Maltzman, David O'Brien, Jeffrey Segal, Charles Sheldon, James Spriggs II, and Paul Wahlbeck.

Flood-runoff Analysis, 1997-01-01 Describes methods for evaluating flood-runoff characteristics of watersheds. Guidance is provided in selecting and applying such methods to support the various investigations required for US Army Corps of Engineers (USACE) civil works activities.

Polarized Light and Polarization Vision in Animal Sciences Gábor Horváth, 2014-10-30 This book covers advances made since the 2004 Springer volume "Polarized Light in Animal Vision" edited by Horvath and Varju, but also provides reviews and synopses of some areas. Part I examines polarization sensitivity across many animal taxa including vertebrates and invertebrates and details both terrestrial and aquatic life. Part II is devoted to the description of polarized light in nature and explores how the physics of light must be taken into account when understanding how polarized light is detected by the visual system. This includes underwater polarization due to scattering; polarization patterns reflected from freshwater bodies; polarization characteristics of forest canopies; normal and anomalous polarization patterns of the skies; skylight polarization transmitted through Snell's window and both linearly and circularly polarized signals produced by terrestrial and aquatic animals. This Part also examines polarized "light pollution" induced by anthropogenic factors such as reflection off asphalt surfaces, glass panes, car bodies, and other man-made structures that are now known to form

ecological traps for polarotactic insects. Part III surveys some of the practical applications of polarization vision including polarization-based traps for biting insects, ground-based polarimetric cloud detectors and an historical examination of the navigational abilities of Viking seafarers using the sky polarization compass. The deterrent qualities of ungulate pelage to polarization-sensitive biting insects is also examined in this section.

Fear, Anxiety, and National Identity Nancy Foner, Patrick Simon, 2015-10-12 Fifty years of large-scale immigration has brought significant ethnic, racial, and religious diversity to North America and Western Europe, but has also prompted hostile backlashes. In *Fear, Anxiety, and National Identity*, a distinguished multidisciplinary group of scholars examine whether and how immigrants and their offspring have been included in the prevailing national identity in the societies where they now live and to what extent they remain perpetual foreigners in the eyes of the long-established native-born. What specific social forces in each country account for the barriers immigrants and their children face, and how do anxieties about immigrant integration and national identity differ on the two sides of the Atlantic? Western European countries such as Germany, the Netherlands, and the United Kingdom have witnessed a significant increase in Muslim immigrants, which has given rise to nativist groups that question their belonging. Contributors Thomas Faist and Christian Ulbricht discuss how German politicians have implicitly compared the purported “backward” values of Muslim immigrants with the German idea of *Leitkultur*, or a society that values civil liberties and human rights, reinforcing the symbolic exclusion of Muslim immigrants. Similarly, Marieke Sloom and Jan Willem Duyvendak find that in the Netherlands, the conception of citizenship has shifted to focus less on political rights and duties and more on cultural norms and values. In this context, Turkish and Moroccan Muslim immigrants face increasing pressure to adopt “Dutch” culture, yet are simultaneously portrayed as having regressive views on gender and sexuality that make them unable to assimilate. Religion is less of a barrier to immigrants’ inclusion in the United States, where instead undocumented status drives much of the political and social marginalization of immigrants. As Mary C. Waters and Philip Kasinitz note, undocumented immigrants in the United States are ineligible for the services and freedoms that citizens take for granted and often live in fear of detention and deportation. Yet, as Irene Bloemraad points out, Americans’ conception of national identity expanded to be more inclusive of immigrants and their children with political mobilization and changes in law, institutions, and culture in the wake of the Civil Rights Movement. Canadians’ views also dramatically expanded in recent decades, with multiculturalism now an important part of their national identity, in contrast to Europeans’ fear that diversity undermines national solidarity. With immigration to North America and Western Europe a continuing reality, each region will have to confront anti-immigrant sentiments that create barriers for and threaten the inclusion of newcomers. *Fear, Anxiety, and National Identity* investigates the multifaceted connections among immigration, belonging, and citizenship, and provides new ways of thinking about national identity.

World Investment Report 2020 Organizacja Narodów Zjednoczonych,
Identifying Technology Spillovers and Product Market Rivalry Nicholas Bloom, 2014 Support for Ramp;D subsidies relies on empirical evidence that Ramp;D “spills over” between firms. But firm performance is affected by two countervailing Ramp;D spillovers: positive effects from technology spillovers and negative business stealing effects from Ramp;D by product market rivals. We develop a general framework showing that technology and product market spillovers have testable implications for a range of performance indicators, and then exploit these using distinct measures of a firm's position in technology space and product market space. Using panel data on U.S. firms between 1980 and 2001 we show that both technology and product market spillovers operate, but technology spillovers quantitatively dominate. The spillover effects are also present when we analyze three high tech sectors in finer detail. Using the model we evaluate the net spillovers from three alternative Ramp;D subsidy policies.
