John Lingenfelter on Modifying Small-Block Chevy Engines John Lingenfelter, 1996-01-01 John Lingenfelter has been building, racing, and winning with small-block Chevy engines since 1972, when he arrived on the drag racing scene. This book offers many of his trademark power-producing techniques that have led to victory on the drag strip as well as on the Bonneville salt flats, where he set top speed records in his class.

Block 11 Piero degli Antoni, 2012-10-16 From an award-winning author comes an audacious, high-concept noir set in Auschwitz that straddles past and present New York, the present: An old woman and her husband sit down for a breakfast of black bread and coffee at a table set for ten. Eight chairs remain empty. Auschwitz, Spring 1944: Following a successful escape from the camp, a group of ten prisoners are rounded up for execution. But at the last minute, counter-orders are given. Since the camp needs every inmate for labor, only one prisoner will be sacrificed. And it is the job of the other nine prisoners, locked up in an empty building in Block 11 with nothing but a piece of paper and pencil, to decide by dawn who will die. Otherwise they will all go to the gallows. Thus begins a night of storytelling with tales of horror, secrecy, and betrayal, but also of love and great humanity, as these ten prisoners debate who deserves to live and who deserves to die. The night is filled with violence, emotion, and shocking revelations. Degli Antoni wrestles with questions of guilt and forgiveness, selfishness and sacrifice,

in this unforgettable novel set during the most trying of times.

Energy Lab for Kids Emily Hawbaker,2017-05-01 Energy Lab for Kids offers 40 discovery-filled and thought-provoking energy projects by Emily Hawbaker, a science educator from the NEED (National Energy Education Development) project—with a foreword by Liz Lee Heinecke, author of Kitchen Science Lab for Kids. Using supplies that you can find around the house or in the grocery store, these exciting projects let you observe, explore, discover, and get energized! We hear about energy on the news, we use it every day, and sometimes we're told we have too much of it. But what is energy—potential, kinetic, chemical, radiant, and thermal? The lab activities in this book will let you explore almost everything about energy—what it is, how we find it, how we use it, and how we can save it. Uniting this collection of science experiments for the kitchen, backyard, or classroom is the goal to explore and discover real energy solutions. The chapters cross all categories—from steam, electricity, and chemical reactions, to water, solar, and wind power—allowing kids to compare and test the different sources and to discover their strengths and failings. Why is one source of energy is more efficient for a one situation but not for another? Why might two energy sources combined work better than a single source? Which sources are renewable? Projects are geared to understanding actual issues in the news today. With an

emphasis on inventive exploration, you'll discover that creativity leads to breakthroughs. Learn about: chemical, radiant, and thermal energy by activating a glow stick and watching it get brighter in hot water. viscosity by sucking soda and chocolate syrup up an oil pipeline made from straws. solar energy by melting s'mores in a pizza box solar oven. wind power by lifting paperclips with a wind turbine made from a cup, paper, tape, and straw. calories by burning cheese puffs (and other food) in a homemade calorimeter. The popular Lab for Kids series features a growing list of books that share hands-on activities and projects on a wide host of topics, including art, astronomy, clay, geology, math, and even how to create your own circus—all authored by established experts in their fields. Each lab contains a complete materials list, clear step-by-step photographs of the process, as well as finished samples. The labs can be used as singular projects or as part of a yearlong curriculum of experiential learning. The activities are open-ended, designed to be explored over and over, often with different results. Geared toward being taught or guided by adults, they are enriching for a range of ages and skill levels. Gain firsthand knowledge on your favorite topic with Lab for Kids.
