International Law, Power, Security and Justice Serge Sur,2010-10-05 These collected essays deal with the evolutions and immutabilities of international society and international law during the last 25 years, a period during which these fields of study have undergone many changes. The starting point is that far from operating at different levels or being in conflict, international law and politics are closely intertwined. The book addresses the many different aspects of international law: the role and concept of the State, and the position of States in the international system; the bases, principles and evolution of public international law; questions of international security that still govern international relations; classic and current systems of peace and security maintenance; the standing, role and actions of the UN Security Council; arms control and limitation of armaments; unilateral uses of armed force and the legality of war; and humanitarian law and international criminal justice. The perspective of these essays is not a theoretical or dogmatic vision of international law and politics; rather they are based upon the practices of States in the international arena, and the ways in which the guiding legal rules are elaborated and implemented. These texts have been selected from Professor Sur's various books and numerous articles on international law and relations.

China, Europe and International Security Frans-Paul van der Putten,Chu Shulong,2012-07-26 This book examines the roles played by China and Europe in the domain of international security in the 21st century. Bringing together Chinese and European expertise on the Sino-European Security relationship, this book positions Europe - both the EU and the major national actors - and China in a global security context. It offers not merely an elaboration of the theme of bilateral security relations, but also introduces a wider view on Europe and China as global security actors. The chapters cover four main themes: the perceptions of and actual relations between Europe and China as security actors; relations of China and Europe with third parties such as the US, Russia, and Iran; Europe and China as actors in multilateral security approaches; Europe and China as (potential) security actors in each other's technological domain or region. Given the increasingly prominent roles that both China and Europe play in international security as permanent members of the UN Security Council (in the European case, through the informal and partial representation of the UK and France), through their extensive global economic interests, and their important relations with the USA, this book provides a timely examination of the current state and future developments in the Sino-European relationship. This book will be of much interest to students of international security, Chinese politics, EU studies and IR in general.

Air Power in UN Operations Professor A Walter Dorn,2014-08-28 Air power for warfighting is a story that's been told many times. Air power for peacekeeping and UN enforcement is a story that desperately needs to be told. In rich detail this volume describes: aircraft transporting vital supplies to UN peacekeepers and massive amounts of humanitarian aid to war-affected populations; aircraft serving as the 'eyes in sky' to keep watch for the world organization; and combat aircraft enforcing the peace. Rich poignant case studies illuminate the past and present use of UN air power, pointing the way for the future.

Risk State Sebastian Maslow, Ra Mason, Paul O'Shea, 2016-03-03 The increase of new complex security challenges and the heightening significance of a diverse array of actors has simultaneously posed a challenge to traditional perspectives on international relations and foreign policy and created an opportunity for new concepts to be applied. Conventional explanations of Japan's foreign policy have provided us with theoretically predetermined understandings and fallacious predictions. Reformulating risk in its application to the study of international relations and foreign policy, this volume promises new insights into the analysis of contemporary foreign policy in East Asia and Japan's post-Cold War international relations in particular.

Monitoring, Control and Protection of Interconnected Power Systems Ulf Häger, Christian Rehtanz, Nikolai Voropai, 2014-07-08 The interstate integration of power grids provides multiple advantages concerning operation security, integration of renewable energy as well as energy trading. Due to these facts grid interconnections, such as ENTSO-E in Continental Europe, expand continually since its establishment. Due to the increasing scale and distance of interconnected power systems as well as an increasing number of countries involved with increasing complexity of operation, comprehensive R&D and innovations are urgently required to assure reliable and efficient operation of power systems. In this book new tools and methods are presented for monitoring, control and protection of large scale power systems. These tools and methods consider Smart Grid technologies based on wide area data exchange in combination with modern measurement devices, such as PMUs and advanced network controllers such as FACTS and HVDC systems. Within this topic the impact and reliability of different communication technologies play a key role. The material of this book is based on final results from the international research project ICOEUR "Intelligent Coordination of Operation and Emergency Control of EU and Russian Power Grids", supported by the European Commission and the Russian Federal Agency of Science and Innovation. This book provides a great value for professional power system engineers as well as for students interested in topics related to large scale power system monitoring, control, protection and operation.

Routledge Handbook of Media, Conflict and Security Piers Robinson, Philip Seib, Romy Frohlich, 2016-11-10 This Handbook links the growing body of media and conflict research with the field of security studies. The academic sub-field of media and conflict has developed and expanded

greatly over the past two decades. Operating across a diverse range of academic disciplines, academics are studying the impact the media has on governments pursuing war, responses to humanitarian crises and violent political struggles, and the role of the media as a facilitator of, and a threat to, both peace building and conflict prevention. This handbook seeks to consolidate existing knowledge by linking the body of conflict and media studies with work in security studies. The handbook is arranged into five parts: Theory and Principles. Media, the State and War Media and Human Security Media and Policymaking within the Security State New Issues in Security and Conflict and Future Directions For scholars of security studies, this handbook will provide a key point of reference for state of the art scholarship concerning the media-security nexus; for scholars of communication and media studies, the handbook will provide a comprehensive mapping of the media-conflict field.

Schools Under Surveillance Torin Monahan, Rodolfo D Torres, 2009-10-13 Schools under Surveillance gathers together some of the very best researchers studying surveillance and discipline in contemporary public schools. Surveillance is not simply about monitoring or tracking individuals and their data; it is about the structuring of power relations through human, technical, or hybrid control mechanisms. Essays cover a broad range of topics including police and military recruiters on campus, testing and accountability regimes such as No Child Left Behind, and efforts by students and teachers to circumvent the most egregious forms of surveillance in public education. Each contributor is committed to the continued critique of the disparity and inequality in the use of surveillance to target and sort students along lines of race, class, and gender.

The Politics of Evasion Robert Latham, 2016-03-31 Burgeoning national security programs; thickening borders; Wikileaks and Anonymous; immigrant rights rallies; Occupy movements; student protests; neoliberal austerity; global financial crises – these developments underscore that the fable of a hope-filled post-cold war globalization has faded away. In its place looms the prospect of states and corporations transforming a permanent war on terror into a permanent war on society. How, at the critical juncture of a post-globalization era, will policymakers and power-holders in leading states and corporations of the Global North choose to pursue power and control? What possibilities and limits do activists and communities face for progressive political action to counter this power inside and outside the state? This book is a sustained dialogue between author and political theorist, Robert Latham and Mr. V, a policy analyst from a state in the Global North. Mr. V is sympathetic to the pursuit of justice, rights and freedom by activists and movements but also mindful of the challenges of states in pursuing security and order in the current social and political moment. He seeks a return to the progressive, welfare-oriented state associated with the twentieth century. The dialogue offers an in-depth consideration of whether this is possible and how a progressive politics might require a different approach to social organization, power and collective life. Exploring key ideas, such as sovereignty, activism, neoliberalism, anarchism, migration, intervention, citizenship, security, political resistance and transformation, and justice, this book will be of interest to academics and students of Political Science, Sociology, Anthropology, Law, Geography, Media and Communication, and Cultural Studies.

The Domestic Dynamics Of China's Energy Diplomacy Zhang Chi, 2015-09-17 Since the beginning of the 21st century, China's energy diplomacy has been expanding rapidly and the country is searching for energy resources worldwide. This movement has not only improved China's energy security and international relations, but also enabled the Chinese national oil companies (NOCs) to access new investment markets and implement development strategies. The Chinese government and the NOCs need each other's support to realise their respective interests. The interaction between the government and the NOCs will have a critical influence on China's energy diplomacy. The Domestic Dynamics of China's Energy Diplomacy explores the long-neglected domestic dynamics of China's energy diplomacy, in particular the interaction of national and corporate interests. It argues that the convergence of national and corporate interests is the key momentum of China's energy diplomacy. It observes that the government-NOC relationship has been evolving with China's economic and enterprise reform. Finally, it tests the empirical evidence of the domestic

dynamics of China's energy diplomacy against the three mainstream international political economy theories, showing their merits and shortcomings in explaining the phenomenon, before providing an alternative conceptualisation of the movement.

Africa's Soft Power Oluwaseun Tella, 2021-05-23 This book investigates the ways in which soft power is used by African countries to help drive global influence. Selecting four of the countries most associated with soft power across the continent, this book delves into the currencies of soft power across the region: from South Africa's progressive constitution and expanding multinational corporations, to Nigeria's Nollywood film industry and Technical Aid Corps (TAC) scheme, Kenya's sport diplomacy, fashion and tourism industries, and finally Egypt's Pan-Arabism and its reputation as the cradle of civilisation. The book asks how soft power is wielded by these countries and what constraints and contradictions they encounter. Understandings of soft power have typically been driven by Western scholars, but throughout this book, Oluwaseun Tella aims to Africanise our understanding of soft power, drawing on prominent African philosophies, including Nigeria's Omolúwàbí, South Africa's Ubuntu, Kenya's Harambee, and Egypt's Pharaonism. This book will be of interest to researchers from across political science, international relations, cultural studies, foreign policy and African Studies. Freeing Speech John Denvir, 2010-05-10 The United States is in the midst of a heated conversation over how the Constitution impacts national security. In a traditional reading of the document, America uses military force only after a full and informed national debate. However, modern presidents have had unparalleled access to the media as well as control over the information most relevant to these debates, which jeopardizes the abilities of a democracy's citizens to fully participate in the discussion. The author targets this issue of presidential dominance and argues that the First Amendment's goal is to protect the entire structure of democratic debate, even including activities ancillary to the dissemination of speech itself. Assessing the right of political association, the use of public streets and parks for political demonstrations, the press' ability to comment on public issues, and presidential speech on national security, he examines why this democratic model of free speech is essential at all times, but especially during the War on Terror.

Handbook of Energy Transitions Muhammad Asif, 2022-10-14 The global energy scenario is undergoing an unprecedented transition. In the wake of enormous challenges—such as increased population, higher energy demands, increasing greenhouse gas emissions, depleting fossil fuel reserves, volatile energy prices, geopolitical concerns, and energy insecurity issues—the energy sector is experiencing a transition in terms of energy resources and their utilization. This modern transition is historically more dynamic and multidimensional compared to the past considering the vast technological advancements, socioeconomic implications and political responses, and ever-evolving global policies and regulations. Energy insecurity in terms of its critical dimensions—access, affordability, and reliability—remains a major problem hindering the socioeconomic progress in developing countries. The Handbook of Energy Transitions presents a holistic account of the 21st-century energy transition away from fossil fuels. It provides an overview of the unfolding transition in terms of overall dimensions, drivers, trends, barriers, policies, and geopolitics, and then discusses transition in terms of particular resources or technologies, such as renewable energy systems, solar energy, hydropower, hydrogen and fuel cells, electric vehicles, energy storage systems, batteries, digitalization, smart grids, blockchain, and machine learning. It also discusses the present energy transition in terms of broader policy and developmental perspectives. Further, it examines sustainable development, the economics of energy and green

growth, and the role of various technologies and initiatives like renewables, nuclear power, and electrification in promoting energy security and energy transition worldwide. Key Features Includes technical, economic, social, and policy perspectives of energy transitions Features practical case studies and comparative assessments Examines the latest renewable energy and low-carbon technologies Explains the connection between energy transition and global climate change

Climate Change and the UN Security Council Shirley V. Scott,Charlotte Ku, In this forward-looking book, the authors consider how the United Nations Security Council could assist in addressing the global security challenges brought about by climate change. Contributing authors contemplate how the UNSC could prepare for this role; progressing the debate from whether and why the council should act on climate insecurity, to how? Scholars, activists, and policy makers will find this book a fertile source of innovative thinking and an invaluable basis on which to develop policy.
