The School Bereavement Toolkit Jacquie Palmer, 2021-08-09 Practical and accessible, this guidebook is designed to help staff in schools support bereaved children in their care. Providing information and guidance on practical issues around bereavement and indicating some of the issues that might require extra thought or assistance, this book makes accessing relevant information as easy and quick as possible. When busy school staff are faced with a bereaved child, the prospect can be daunting. What do I say? What can I do? Will I make it worse? Have I got time to do this? This book is a toolbox to give staff confidence in helping bereaved young people. Information is easily accessed and simple to use, giving staff quick and practical help. There are sections on what will help and what will not; also included are photocopiable worksheets and tools to aid children and young people to explore their grief, as well as information on how school communities can share the news and manage an initial response. With age-appropriate guidance to help school staff working in both primary and secondary settings, this key guide provides quick-to-access information for those not trained in child bereavement to help individual children or whole classes following a loss.

Environmental Information Systems Oliver Günther, 2013-03-09 Environmental information systems (EIS) are concerned with the management of data about the soil, the water, the air, and the species in the world around us. This first textbook on the topic gives a conceptual framework for EIS by structuring the data flow into 4 phases: data capture, storage, analysis, and metadata management. This flow corresponds to a complex aggregation process gradually transforming the incoming raw data into concise documents suitable for high-level decision support. All relevant concepts are covered, including statistical classification, data fusion, uncertainty management, knowledge based systems, GIS, spatial databases, multidimensional access methods, object-oriented databases, simulation models, and Internet-based information management. Several case studies present EIS in practice.

Analysis and Simulation of Electrical and Computer Systems Damian Mazur, Marek Gołębiowski, Mariusz Korkosz, 2018-08-31 This book addresses selected topics in electrical engineering, electronics and mechatronics that have posed serious challenges for both the scientific and engineering communities in recent years. The topics covered range from mathematical models of electrical and electronic components and systems, to simulation tools implemented for their analysis and further developments; and from multidisciplinary optimization, signal processing methods and numerical results, to control and diagnostic techniques. By bridging theory and practice in the modeling, design and optimization of electrical, electromechanical and electronic systems, and by adopting a multidisciplinary perspective, the book provides researchers and practitioners with timely and extensive information on the state of the art in the field — and a source of new, exciting ideas for further developments and collaborations. The book presents selected results of the XIII Scientific Conference on Selected Issues of Electrical Engineering and Electronics (WZEE 2016), held on May 04–08, 2016, in Rzeszów, Poland. The Conference was organized by the Rzeszów Division of Polish Association of Theoretical and Applied Electrical Engineering (PTETiS) in cooperation with the Faculty of Electrical and Computer Engineering of the Rzeszów University of Technology.

Fundamentals of Heat Exchanger Design Shudhkar Mishra, 2015-08 Heat exchanger has increased immensely from the viewpoint of energy conservation, conversion, recovery, and successful implementation of new energy sources. Its importance is also increasing from the stand-point of environmental concerns such as thermal pollution, air pollution, water pollution, and waste disposal. Heat exchangers are used in the process, power, transportation, air-conditioning and refrigeration, cryogenic, heat recovery; alternate fuels, and manufacturing industries, as well as being key components of many industrial products available in the marketplace. The heat exchanger design equation can be used to calculate the required heat transfer surface area for a variety of specified fluids, inlet and outlet temperatures and types and configurations of heat exchangers, including counterflow or parallel flow. A value is needed for the overall heat transfer coefficient for the given heat exchanger, fluids, and temperatures. Heat exchanger calculations could be made for the required heat transfer area, or the rate of

heat transfer for a heat exchanger of given area.
