*A Sustainable Approach to Building Commissioning* Steven Driver, 2018-12-14  
An International Approach to Sustainability was written by Steven P. Driver Ph.D. to educate anyone interested in reducing operational costs in buildings with an interest in making a difference in climate change. Through the application of energy conservation techniques, whether it's your home or workplace, this e-book can help you reduce energy consumption. This e-book was written to educate home owners, building managers, real estate developers, university and campus facility maintenance personnel, employees, and anyone else with an interest in helping our environment. This publication offers an understanding of some available technologies to mitigate energy waste. Having overcome proprietary barriers which restricted the full understanding of how to combine artificial and human intelligence with respect to building commissioning is what makes this publication unique. After completing several years of post-doctoral research to understanding differences and benefits between ongoing and retroactive commissioning, we now have a better vision of what is required to make our buildings sustainable with respect to energy consumed. This publication includes over 30 years of experience in energy management and formed the basis for a U.S trademark on Sustainable Commissioning, a concept explained in this e-book. The journey continues in researching new energy reduction technologies and piloting them confirming further effectiveness of the concept. The content in this e-book was validated through the deployment of several case studies applying the Sustainable Commissioning concept. The results from those case studies have validated an average return on investment of 62% with a 75% internal rate of return resulting in an 18 month simple pay back. The results demonstrate not only how to save operational cost, but environmental benefits averaging 1,009 metric tons of carbon emissions avoided annually for each case study.

**Ascended: The Omega Nexus** Roger Reece and Jerry Reece, 2012-05-09 In the late 1980s, the U.S. government commissioned a project to create the perfect soldier. A range of experiments was performed on a group of soldiers, including genetic reconstruction which was made possible by a serum created by Dr. Emanuel Brown. Despite the advancements made, the project was deemed a failure and the soldiers were discharged, much to the chagrin of its leader, General James S. Lassiter. The general and Dr. Brown continued their experiments, administering the trial serum to each other. After years of experimentation, Dr. Brown and General Lassiter would eventually part ways, both thinking that their efforts of perfecting the serum were fruitless. It wouldn't be until the birth of the general's son that the effects of the serum would be realized. The power of the serum had been passed down genetically from the original test subjects to their offspring, giving them super human abilities. The general realized that all of the offspring of those to whom the serum was administered would have superior traits as well. Realizing the potential of these children, the general gathered a group of renegade soldiers, who shared his views of hatred toward the government, and

formed an organization known as STING. He hunted down and killed the soldiers of the original project and abducted their children. He took them to a hidden compound so he could raise and train them to be his superior army. Dr. Brown foresaw the evil of the general's ambitions. With the help of a small band of Ascended children he called the Omega Nexus, he organized an escape that would lead to the destruction of the STING compound and STING. Now, STING has reassembled for the sole purpose of recollecting the Ascended who are now extremely powerful adults scattered throughout the United States. Unbeknownst to STING, the Omega Nexus is waiting...

Qiu,2011-10-23 This book constitutes the refereed proceedings of the 13th International Conference on Formal Engineering Methods, ICFEM 2011, held in Durham, UK, October 2011. The 40 revised full papers together with 3 invited talks presented were carefully reviewed and selected from 103 submissions. The papers address all current issues in formal methods and their applications in software engineering. They are organized in topical sections on formal models; model checking and probability; specification and development; security; formal verification; cyber physical systems; event-B; verification, analysis and testing; refinement; as well as theorem proving and rewriting.

**How to Install and Tune Nitrous Oxide Systems** Bob McClurg,2012 In this book, McClurg reviews the often-mystical subject of nitrous oxide injection systems with a level head and a clear purpose. This book educates the reader on the properties of nitrous oxide and most-effective way to design, install, and tune complete systems. A definite focus on safety and a need to answer the typical questions associated with the use of nitrous oxide is highlighted, and several complete installations are featured.
