Macromolecular Architectures Jöns G. Hilborn,2003-07-03 Molecular manipulation of nano- and microstructures paves the way to produce organic polymer materials by design. Such architectures comprise both the synthesis and the kinetics and thermodynamics of macromolecular organization and is the theme of this volume. The book consists of four articles reviewing living polymerization to produce precisely defined linear polyesters, comparing them to other living polymerization techniques. The articles also deal with the synthesis of polymeric dendrimers, either by the convergent or divergent approach; block copolymers synthesis, to define micromorphology in high performance polymers; and thereby tailoring their thermal, chemical, mechanical and dielectrical properties, and finally kinetics and thermodynamics for microstructural organization in macroporous thermosets.

Modification of Polymers Charles E. Carraher,James A. Moore,2012-12-06 The sheer volume of topics which could have been included under our general title prompted us to make some rather arbitrary decisions about content. Modification by irradiation is not included because the activity in this area is being treated elsewhere. We have chosen to emphasize chemical routes to modification and have striven to present as balanced a representation of current activity as time and page count permit. Industrial applications, both real and potential, are included. Where appropriate, we have encouraged the contributors to include review material to help provide the reader with adequate context. The initial chapter is a review from a historical perspective of polymer modification and contains an extensive bibliography. The remainder of the book is divided into four general areas: Reactions and Preparation of Copolymers Reactions and Preparation of Block and Graft Copolymers Modification Through Condensation Reactions Applications The chemical modification of homopolymers such as polyvinylchloride, polyethylene, poly(chloroalkylene sulfides), polysulfones, poly(chloromethylstyrene), polyisobutylene, polysodium acrylate, polyvinyl alcohol, polyvinyl chloroformate, sulfonated polystyrene; block and graft copolymers such as poly(styrene-block-ethylene-co-butylene block-styrene), poly(1,4-polybutadiene-block ethylene oxide), star chlorine-telechelic polyisobutylene, poly(isobutylene-co-2,3-dimethyl-1,3-butadiene), poly(styrene-co-N-butylmethacrylate); cellulose, dextran and inulin, is described.

Speculative Execution in High Performance Computer Architectures David Kaeli, Pen-Chung Yew,2005-05-26 Until now, there were few textbooks that focused on the dynamic subject of speculative execution, a topic that is crucial to the development of high performance computer architectures. *Speculative Execution in High Performance Computer Architectures* describes many recent advances in speculative execution techniques. It covers cutting-edge research

Light Absorption in Sea Water Bogdian Wozniak,Jerzy Dera,2007-05-11 This book provides a detailed description of light absorption and absorbents in seawaters with respect to provenance, region of the sea, depth of the occurrence and trophicity. The text is based on a substantial body of contemporary research results taken from the subject literature (over 400 references) and the work of the authors over a period of 30 years.

Optical Clearing of Tissues and Blood Valerii Viktorovich Tuchin,2006 This book describes an optical clearing method based on reversible reduction of tissue scattering due to refractive index matching of scatterers and ground matter. This technique, which has been of great interest for research and application in the last decade, is a promising technique for future developments in the fields of tissue imaging, spectroscopy, phototherapy, and laser surgery.

Taronga Victor Kelleher,2013 The great dome of the sky, black, star-sprinkled, arched above him, appearing at that moment so limitless, so vast and free, that the fences and cages of Taronga were dwarfed, reduced to the point where they barely seemed to exist . . . Every so often, there comes a story so brilliant and lively and moving that it cannot be left in the past. Rediscover the magic of our country's most memorable children's books in the Penguin Australia Children's Classics series of stories too precious to leave behind.

The Later Career of Tobias Smollett Louis Lohr Martz,1967 The present study is not a biography; nor does it represent a complete examination of everything which Smollett wrote after 1753, the date which I have chosen to mark the beginning of Smollett's later career. Most of this study is limited to what appears to be the most important and the most neglected aspect of Smollett's later career - an aspect linked with a dominant intellectual trend of the eighteenth century. It has long been noted that Smollett's later creative works, 'Travels through France and Italy', 'Adventures of an atom', and 'Humphry Clinker', are radically different from his earlier creative works, 'Roderick Random', 'Peregrine Pickle', and 'Ferdinand Count Fathom'. It has also been noted, much less frequently, that his prose style underwent a considerable change in the later works. But the causes and exact nature of these changes have barely been suggested. Between 1753 and 1766 Smollett published no creative work except 'Sir Launcelot Greaves', some small pieces of verse and the short farce, 'The reprisal'; and it has long been known that these years of his life were chiefly occupied by manifold literary drudgery: compiling, editing, translating, reviewing, pamphleteering. But the nature and extent of these labors have never been adequately investigated. These gaps in our knowledge of Smollett are intimately related. A study of Smollett's literary drudgery reveals the fundamental causes and helps to ascertain the nature of the changes found in Smollett's later creative works. A study of Smollett's compilations, in particular, helps to connect the later creative works with the contemporary trend toward the accumulation and synthesis of facts, historical, topographical, and scientific. In the gradual movement towards classification and synthesis of knowledge, Smollett's work as editor and compiler proves to be of prime significance. This trend also appears to have a strong connection with the peculiar prose style known as Johnsonian. -- preface, p. [vii].

Best of Enemies Rainier George Weiner,2015-05-07 Suppose fate placed you on an inflatable life-raft in the middle of the freezing Atlantic Ocean along with your most bitter enemy contrivable? Would the emotions of hatred, revenge and love of country trump the desire to survive, if killing that enemy ensured your own demise? Captain Mat Richardson, USN, and Emil Gluckler, a German submarine commander, experience that option during the 2nd World War. Mat, captain of a small destroyer, and Emil, commander of an attacking submarine, become stranded on a life-raft after each of the combatant crafts sink each other during a fierce naval engagement. They subsequently experience 38 harrowing days striving for survival. If nothing else, this required the ultimate in mutual cooperation. If the two survived, would the events have a lasting effect on their relationship? Or, if one had the opportunity to kill the other at a later date in a new war-time circumstance, would he do so, or not?
