**The Resurgence of the West** Richard Rosecrance,2013-06-18 DIVAAfter two centuries of ascent, the United States finds itself in economic decline. Some advise America to cure its woes alone. But the road to isolation leads inevitably to the end of U.S. leadership in the international system, warns Richard Rosecrance in this bold and novel book. Instead, Rosecrance calls for the United States to join forces with the European Union and create a transatlantic economic union.

Such a U.S.-Europe community would unblock arteries of trade and investment, rejuvenate the West, and enable Western countries to deal with East Asian challenges from a position of unity and economic strength. Exploring the possibilities for such a merger, the author writes, "The European Union offers a means of creating larger units without recourse to force. A connection between Europe and North America could eventually grow into an agglomeration of states, drawing China and the East into a new network of countries. In this way East will eventually join the West." Through this great merger the author offers a positive vision of the future in which members of a tightly knit Western alliance regain economic health and attract Eastern nations to join a new and worldwide international order./div

**Ecological Restoration of Aquatic and Semi-Aquatic Ecosystems in the Netherlands (NW Europe)**  
Piet H. Nienhuis, Ramesh D. Gulati, 2002-11-30 This work presents the state of the art of aquatic and semi-aquatic ecological restoration projects in The Netherlands. Starting from the conceptual basis of restoration ecology, the successes and failures of hundreds of restoration projects are described. Numerous successful projects are mentioned. In general ecological restoration endeavours greatly benefit from the progressive experience achieved in the course of the years. Failures mainly occur through insufficient application of physical, chemical or ecological principles. Spontaneous colonization by plants and

animals, following habitat reconstruction, is preferred. However, sometimes the re-introduction of keystone species (e.g. eelgrass, salmon, beaver) is necessary in case the potential habitats are isolated or fragmented, or if a seed bank is lacking, thus not allowing viable populations to develop. Re-introducing traditional management techniques (e.g. mowing without fertilization, low intensity grazing) is important to rehabilitate the semi-natural and cultural landscapes that are so characteristic for The Netherlands.
