Computer Graphics Techniques David F. Rogers, Rae Earnshaw, 2001-10-31 In the third paper in this chapter, Mike Pratt provides an historical introduction to solid modeling. He presents the development of the three most frequently used techniques: cellular subdivision, constructive solid modeling and boundary representation. Although each of these techniques developed more or less independently, today the designer's needs dictate that a successful system allows access to all of these methods. For example, sculptured surfaces are generally represented using a boundary representation. However, the design of a complex vehicle generally dictates that a sculptured surface representation is most efficient for the 'skin' while constructive solid geometry representation is most efficient for the internal mechanism. Pratt also discusses the emerging concept of design by 'feature line'. Finally, he addresses the very important problem of data exchange between solid modeling systems and the progress that is being made towards developing an international standard. With the advent of reasonably low cost scientific workstations with reasonable to outstanding graphics capabilities, scientists and engineers

are increasingly turning to computer analysis for answers to fundamental questions and to computer graphics for presentation of those answers. Although the current crop of workstations exhibit quite impressive computational capability, they are still not capable of solving many problems in a reasonable time frame, e. g. , executing computational fluid dynamics and finite element codes or generating complex ray traced or radiosity based images. In the sixth chapter Mike Muuss of the U. S.

Writing through Boyhood in the Long Eighteenth Century Chantel Lavoie,2023-11-10 *Writing through Boyhood in the Long Eighteenth Century* explores how boyhood was constructed in different creative spaces that reflected the lived experience of young boys through the long eighteenth century—not simply in children’s literature but in novels, poetry, medical advice, criminal broadsides, and automaton exhibitions. The chapters encompass such rituals as breeching, learning to read and write, and going to school. They also consider the lives of boys such as chimney sweeps and convicted criminals, whose bodily labor was considered their only value and who often did not live beyond boyhood. Defined by a variety of tasks, expectations, and objectifications, boys—real, imagined, and sometimes both—were subject to the control of their elders and were used as tools in the cause of civil society, commerce, and empire. This book argues that boys in the long eighteenth century constituted a particular kind of currency, both valuable and expendable—valuable because of gender, expendable because of youth.
