Reality Is Broken Jane McGonigal, 2011-01-20 "McGonigal is a clear, methodical writer, and her ideas are well argued. Assertions are backed by countless psychological studies." –The Boston Globe "Powerful and provocative . . . McGonigal makes a persuasive case that games have a lot to teach us about how to make our lives, and the world, better." –San Jose Mercury News "Jane McGonigal's insights have the elegant, compact, deadly simplicity of plutonium, and the same explosive force." –Cory Doctorow, author of Little Brother A visionary game designer reveals how we can harness the power of games to boost global happiness. With 174 million gamers in the United States alone, we now live in a world where every generation will be a gamer generation. But why, Jane McGonigal asks, should games be used for escapist entertainment alone? In this groundbreaking book, she shows how we can leverage the power of games to fix what is wrong with the real world—from social problems like depression and obesity to global issues like poverty and climate change—and introduces us to cutting-edge games that are already changing the business, education, and nonprofit worlds. Written for gamers and non-gamers alike, *Reality Is Broken* shows that the future will belong to those who can understand, design, and play games. Jane McGonigal is also the author of *SuperBetter: A Revolutionary Approach to Getting Stronger, Happier, Braver and More Resilient*.

Status Update Alice E. Marwick, 2013-11-26 Presents an analysis of social

media, discussing how a technology which was once heralded as democratic, has evolved into one which promotes elitism and inequality and provides companies with the means of invading privacy in search of profits.

Digital Games in Language Learning and Teaching Hayo Reinders, 2012-06-12
This edited volume explores how digital games have the potential to engage learners both within and outside the classroom and to encourage interaction in the target language. This is the first dedicated collection of papers to bring together state-of-the-art research in game-based learning.

Against Expression Craig Dworkin, Kenneth Goldsmith, 2011-01-17 Charles Bernstein has described conceptual poetry pregnant with thought. *Against Expression*, the premier anthology of conceptual writing, presents work that is by turns thoughtful, funny, provocative, and disturbing. Editors Craig Dworkin and Kenneth Goldsmith chart the trajectory of the conceptual aesthetic from early precursors such as Samuel Beckett and Marcel Duchamp through major avant-garde groups of the past century, including Dada, Oulipo, Fluxus, and language poetry, to name just a few. The works of more than a hundred writers from Aasprong to Zykov demonstrate a remarkable variety of new ways of thinking about the nature of texts, information, and art, using found, appropriated, and randomly generated texts to explore the possibilities of non-expressive language. --Book Jacket.

Business Statistics for Contemporary Decision Making Ignacio Castillo, Ken Black, Tiffany Bayley, 2023-05-08 Show students why business statistics is an increasingly important business skill through a student-friendly pedagogy. In this fourth Canadian edition of Business Statistics For Contemporary Decision Making authors Ken Black, Tiffany Bayley, and Ignacio Castillo uses current real-world data to equip students with the business analytics techniques and quantitative decision-making skills required to make smart decisions in today's workplace.

Real-Time Rendering Tomas Akenine-Möller, Eric Haines, Naty Hoffman, 2019-01-18 Thoroughly revised, this third edition focuses on modern techniques used to generate synthetic three-dimensional images in a fraction

of a second. With the advent of programmable shaders, a wide variety of new algorithms have arisen and evolved over the past few years. This edition discusses current, practical rendering methods used in games and other applications. It also presents a solid theoretical framework and relevant mathematics for the field of interactive computer graphics, all in an approachable style. The authors have made the figures used in the book available for download for fair use.:Download Figures. Reviews Rendering has been a required reference for professional graphics practitioners for nearly a decade. This latest edition is as relevant as ever, covering topics from essential mathematical foundations to advanced techniques used by today's cutting edge games. -- Gabe Newell, President, Valve, May 2008 Rendering ... has been completely revised and revamped for its updated third edition, which focuses on modern techniques used to generate three-dimensional images in a fraction of the time old processes took. From practical rendering for games to math and details for better interactive applications, it's not to be missed. -- The Bookwatch, November 2008 You'll get brilliantly lucid explanations of concepts like vertex morphing and variance shadow mapping—as well as a new respect for the incredible craftsmanship that goes into today's PC games. -- Logan Decker, PC Gamer Magazine , February 2009

Binaural Hearing Ruth Y. Litovsky,Matthew J. Goupell,Richard R. Fay,Arthur N. Popper,2021-03-01 The field of Binaural Hearing involves studies of auditory perception, physiology, and modeling, including normal and abnormal

aspects of the system. Binaural processes involved in both sound localization and speech unmasking have gained a broader interest and have received growing attention in the published literature. The field has undergone some significant changes. There is now a much richer understanding of the many aspects that comprising binaural processing, its role in development, and in success and limitations of hearing-aid and cochlear-implant users. The goal of this volume is to provide an up-to-date reference on the developments and novel ideas in the field of binaural hearing. The primary readership for the volume is expected to be academic specialists in the diverse fields that connect with psychoacoustics, neuroscience, engineering, psychology, audiology, and cochlear implants. This volume will serve as an important resource by way of introduction to the field, in particular for graduate students, postdoctoral scholars, the faculty who train them and clinicians.

Fire Safety Engineering Design of Structures, Third Edition John A. Purkiss, Long-Yuan Li, 2013-12-05 Designing structures to withstand the effects of fire is challenging, and requires a series of complex design decisions. This third edition of *Fire Safety Engineering Design of Structures* provides practising fire safety engineers with the tools to design structures to withstand fires. This text details standard industry design decisions, and offers expert design advice, with relevant historical data. It includes extensive data on materials' behaviour and modeling -- concrete, steel, composite steel-concrete, timber, masonry, and aluminium. While weighted to

the fire sections of the Eurocodes, this book also includes historical data to allow older structures to be assessed. It extensively covers fire damage investigation, and includes as far back as possible, the background to code methods to enable the engineer to better understand why certain procedures are adopted. What's new in the Third Edition? An overview in the first chapter explains the types of design decisions required for optimum fire performance of a structure, and demonstrates the effect of temperature rise on structural performance of structural elements. It extends the sections on less common engineering materials. The section on computer modelling now includes material on coupled heat and mass transfer, enabling a better understanding of the phenomenon of spalling in concrete. It includes a series of worked examples, and provides an extensive reference section. Readers require a working knowledge of structural mechanics and methods of structural design at ambient conditions, and are helped by some understanding of thermodynamics of heat transfer. This book serves as a resource for engineers working in the field of fire safety, consultants who regularly carry out full fire safety design for structure, and researchers seeking background information. Dr John Purkiss is a chartered civil and structural engineer/consultant and former lecturer in structural engineering at Aston University, UK. Dr Long-Yuan Li is Professor of Structural Engineering at Plymouth University, UK, and a Fellow of the Institution of Structural Engineers.

Statistical Regression and Classification Norman Matloff, 2017-09-19

Statistical Regression and Classification: From Linear Models to Machine Learning takes an innovative look at the traditional statistical regression course, presenting a contemporary treatment in line with today's applications and users. The text takes a modern look at regression: * A thorough treatment of classical linear and generalized linear models, supplemented with introductory material on machine learning methods. * Since classification is the focus of many contemporary applications, the book covers this topic in detail, especially the multiclass case. * In view of the voluminous nature of many modern datasets, there is a chapter on Big Data. * Has special Mathematical and Computational Complements sections at ends of chapters, and exercises are partitioned into Data, Math and Complements problems. * Instructors can tailor coverage for specific audiences such as majors in Statistics, Computer Science, or Economics. * More than 75 examples using real data. The book treats classical regression methods in an innovative, contemporary manner. Though some statistical learning methods are introduced, the primary methodology used is linear and generalized linear parametric models, covering both the Description and Prediction goals of regression methods. The author is just as interested in Description applications of regression, such as measuring the gender wage gap in Silicon Valley, as in forecasting tomorrow's demand for bike rentals. An entire chapter is devoted to measuring such effects, including discussion of Simpson's Paradox,

multiple inference, and causation issues. Similarly, there is an entire chapter of parametric model fit, making use of both residual analysis and assessment via nonparametric analysis. Norman Matloff is a professor of computer science at the University of California, Davis, and was a founder of the Statistics Department at that institution. His current research focus is on recommender systems, and applications of regression methods to small area estimation and bias reduction in observational studies. He is on the editorial boards of the Journal of Statistical Computation and the R Journal. An award-winning teacher, he is the author of The Art of R Programming and Parallel Computation in Data Science: With Examples in R, C++ and CUDA.

Website Optimization Rich Page, 2012-04-23 Step-by-step instructions for executing a website testing and optimization plan Website optimization is can be an overwhelming endeavor due to the fact that it encompasses so many strategic and technical issues. However, this hands-on, task-based book demystifies this potentially intimidating topic by offering smart, practical, and tested instructions for developing, implementing, managing, and tracking website optimization efforts. After you learn how to establish an optimization framework, you then dive into learning how to develop a plan, test appropriately and accurately, interpret the results, and optimize in order to maximize conversion rates and improve profits. Zeroes in on fundamentals such as understanding key metrics, choosing analytics tools, researching visitors and their onsite behavior, and crafting a plan for what

to test and optimize Walks you through testing and optimizing specific web pages including the homepage, entry and exit pages, product and pricing pages, as well as the shopping cart and check-out process Guides you through important optimization areas such as optimizing text and images Addresses advanced topics including paid search optimization, Facebook fan page optimization, rich media, and more Includes a companion website that features expanded examples, additional resources, tool reviews, and other related information Full of interesting case studies and helpful examples drawn from the author's own experience, Website Optimization: An Hour a Day is the complete solution for anyone who wants to get the best possible results from their web page.

Making Hard Decisions with DecisionTools Robert Taylor Clemen, Terence Reilly, 2001 MAKING HARD DECISIONS WITH DECISIONTOOLS® is a special version of Bob Clemen's best-selling text, MAKING HARD DECISIONS. This straight-forward book teaches the fundamental ideas of decision analysis, without an overly technical explanation of the mathematics used in management science. This new version incorporates and implements the powerful DecisionTools® by Palisade Corporation, the world's leading toolkit for risk and decision analysis. At the end of each chapter, topics are illustrated with step-by-step instructions for DecisionTools®. This new version makes the text more useful and relevant to students to business and engineering.

A New Theory of Numbers Adrian de Groot, 2020-07-20 This book represents a breakthrough in number theory, by showing the inner, hidden structure of numbers, such as two types of dual characteristics; the surprising inner structure of prime number reciprocals; hidden multiplication and division tables; the many different ways to construct a prime number reciprocal; palindromes; perfect balances of evens and odds; plus and minus differences; a predictable and perfect 12/24-based prime number structure; inner secrets hiding in the Fibonacci series and the Pascal Triangle; ratios related to the square roots of numbers; the special roles of the numbers 1, 2 and 3, as well as 3, 6 and 9; the amazing number 7; the fundamental roles of 81 and 19; the mediating roles of 2 and 5, etc. A bonus chapter has been added about the numbers operating in our solar system. One question will baffle any reader:

how is it possible that so many phenomena are happening all at the same time? One question cannot be escaped; Is there an inherent intelligent logic hiding in the world of numbers?

The Islamophobia Industry Nathan Chapman Lean, 2017 It is undeniable that there is a rising tide of Islamophobia sweeping across the United States and Europe. With *The Islamophobia Industry*, Nathan Lean takes us through the disturbing worlds of conservative bloggers, right wing talk show hosts, evangelical religious leaders, and politicians--all united in a quest to revive post-9/11 xenophobia and convince their compatriots that Islam is the enemy. Lean uncovers modern scare tactics, reveals each groups' true motives, and exposes the ideologies that drive their propaganda machine. Situating Islamophobia within a long history of national and international fears, *The Islamophobia Industry* challenges the illogical narrative of hate that dominated discussions about Muslims and Islam for too long. With this new, updated edition, Lean includes material on the 2016 election and the rhetoric of fear that contributed to Trump's win, the effects of Brexit and Europe's refugee crisis, and the bleak realities about how the new government shaping the United States will increase racism and hate crime, as we are already beginning to see. He discusses the Islamophobia industry's most extreme figures: Breitbart writers, Bill Maher, Steve Bannon, Newt Gingrich, and more. Sharp, intelligent, and shocking, this updated edition offers a timely and in-depth look into the creation and continuation of Islamophobia in the
