The easiest way to learn design patterns Fiodar Sazanavets, 2024-01-14 One thing that makes you truly stand out as a software engineer is a good knowledge of design patterns. Knowing them makes you quicker at solving problems. It makes you much better at understanding architecture. And it significantly improves your chances of landing a good job, as it makes you better at solving problems during technical interviews. However, the biggest problem with the design patterns is that they are hard to learn. Most of them are not very intuitive. Therefore getting to understand them at the level where you can use them usually takes a long time. Many developers just give up, which prevents them from unlocking their full potential. This book aims to solve this problem. It takes a very different approach from how design patterns are normally taught. It does it by providing sufficient context first. Instead of jumping into the UML diagrams and code samples, the book provides descriptions of real-life software engineering challenges that developers can easily relate to. For each of these scenarios, appropriate design patterns are listed with a summary of how each of them can solve a given problem. Only then, when sufficient context has been provided, we jump into the code examples. The process of effective learning is not about memorization. It's about adding new associations to the existing knowledge. And this is the approach this book has taken. Because of its structure, this book can also be effectively used as a reference source. It allows you to look up an appropriate design pattern as you are facing a problem of a particular type.

Expertise and Explicitation in the Translation Process Birgitta Englund Dimitrova, 2005-09-22 This book addresses the complexities of the translation process. Informed by theoretical and methodological advances in translation studies, research on writing and the expertise paradigm, it explores translation as a text reproduction task. With triangulation of data from Russian-Swedish translation - think-aloud-methodology and computer logging of the writing process - it makes a cross-sectional comparison of subjects with different amounts of translation experience, highlighting crucial aspects of professional competence and expertise in translation. The book also elaborates a method for a combined product and process analysis, applying it to the study of one type of explicitation: increased cohesive explicitness of the target text. The results have implications for translation theory and pedagogy. This volume will be of interest to translation scholars and translator trainers, irrespective of language combination, as well as to specialists in Russian and Swedish. It will also appeal to researchers on expertise in other domains.

Future of Knowledge Acquisition This book contains the proceedings of the 11th European Workshop on Knowledge Acquisition, Modeling, and Management (EKAW '99), held at Dagstuhl Castle (Germany) in May of 1999. This continuity and the high number of submissions reflect the mature status of the knowledge acquisition community. Knowledge Acquisition started as an attempt to solve the main bottleneck in developing expert systems (now called knowledge-based systems): Acquiring knowledge from a human expert. Various methods and tools have been developed to improve this process. These approaches significantly reduced the cost of developing knowledge-based systems. However, these systems often only partially fulfilled the task they were developed for and maintenance remained an unsolved problem. This required a paradigm shift that views the development process of knowledge-based systems as a modeling activity. Instead of simply transferring human knowledge into machine-readable code, building a knowledge-based system is now viewed as a modeling activity. A so-called knowledge model is constructed in interaction with users and experts. This model need not necessarily reflect the already available human expertise. Instead it should provide a knowledge level characterization of the knowledge that is required by the system to solve the application task. Economy and quality in system development and maintainability are achieved by reusable problem-solving methods and ontologies. The former describe the reasoning process of the knowledge-based system (i. e. , the algorithms it uses) and the latter describe the knowledge structures it uses (i. e. , the data structures). Both abstract from specific application and domain specific circumstances to enable knowledge reuse.

Flash Builder Building AIR Applications Cesare Rocchi, 2010-11 Understand the architecture of the AIR framework, the merits of AIR applications vs. Flex applications, and the capabilities of the framework including reading and writing files, interacting with local databases, and detecting and manipulate storage devices connected to the computer. Example projects demonstrate how to set up an AIR project, how AIR might be considered an extension to the Flex library to handle interaction with the operative system, and the variety of methods package an application for distribution. Building AIR Applications is the first of four articles that will be compiled in the book, Data Visualization with Flash Builder: Designing RIA and AIR Applications with Remote Data Sources. Each full-color article illustrates specific aspects of Flash Builder data visualization with techniques to employ them. Advances in Computer Systems Architecture Thambipillai Srikanthan, Jingling Xue, Chip-Hong Chang, 2005-10-19 On behalf of the Program Committee, we are pleased to present the proceedings of the 2005 Asia-Pacific Computer Systems Architecture Conference (ACSAC 2005) held in the beautiful and dynamic country of Singapore. This conference was the tenth in its series, one of the leading forums for sharing the emerging research findings in this field. In consultation with the ACSAC Steering Committee, we selected a member Program Committee. This Program Committee represented a broad spectrum of research expertise to ensure a good balance of research areas, institutions and experience while maintaining the high quality of this conference series. This year's committee was of the same size as last year but had 19 new faces. We received a total of 173

submissions which is 14% more than last year. Each paper was assigned to at least three and in some cases four Program Committee members for review. Wherever necessary, the committee members called upon the expertise of their colleagues to ensure the highest possible quality in the reviewing process. As a result, we received 415 reviews from the Program Committee members and their 105 co-reviewers whose names are acknowledged in the proceedings. The conference committee adopted a systematic blind review process to provide a fair assessment of all submissions. In the end, we accepted 65 papers on a broad range of topics giving an acceptance rate of 37.5%. We are grateful to all the Program Committee members and the co-reviewers for their efforts in completing the reviews within a tight schedule.
