Game Production Geoffrey Engelstein,2020-12-21 Description: Many new games are from first-time designers or are self-published, so there is a tremendous thirst for information about the nuts and bolts of tabletop game design. While there are many books about the design process in terms of mechanisms and player experience, there are no books that cover the arts and crafts aspects of how to create a prototype, software and physical tools that can be used, graphic design and rules writing, and considerations for final production. Gamecraft: Prototyping and Producing Your Board Game presents this information in a single volume which will be invaluable for up-and-coming designers and publishers. Key Features: The text compiles information from many websites, blogs, Facebook groups, subreddits, and the author's extensive experience in an easy-to-read volume. The text illustrates how to lay out and assemble the physical aspects of an effective board game. The book is divided into two sections for readability and covers a large array of different techniques. Geoffrey Engelstein is the designer of many tabletop games, including The Ares Project, the Space Cadets series, The Dragon & Flagon, and The Expanse. He is the founder of Ludology, a bi-weekly podcast about game design, and a contributor to the Dice Tower podcast with his bi-weekly GameTek segments that discuss the math, science, and psychology of games. He has also published several books, including GameTek: The Math and Science of Gaming, Achievement Relocked: Loss Aversion and Game Design, and Building Blocks of Tabletop Game Design. He is on the faculty of the NYU Game Center as an adjunct professor for Board Game Design and has been invited to speak at PAX, GenCon, Metatopia, and the Game Developers Conference.

Computer-Assisted Musculoskeletal Surgery Lucas E. Ritacco,Federico E. Milano,Edmund Chao,2015-11-02 Computer-Assisted Surgery (CAS) is a new tool for performing complex procedures in a predictable and safe way. This book is designed to serve as a comprehensive review of Computer-Assisted Surgery, covering the current status of both research and applications. CAS includes Virtual Preoperative Planning (VPP) and Intraoperative Virtual Navigation (IVN), which are a set of technologies used to measure oncological margins in 3-Dimensions (3D), to locate small intraosseous tumors and apply controlled resections preserving anatomical structures. During VPP, patient acquired multimodal images are processed and an interactive virtual scenario is created. This can then be used as a platform to measure oncological distances and preplan osteotomies in safe areas. IVN is a procedure which allows the execution of the VPP with a mean error of less than 3mm. For the student, medical doctors, research and development scientists or new researchers, the protocols are central to the performance of Computer-Assisted technologies.

Agile Software Development Ecosystems James A. Highsmith,2002 Traditional software development methods struggle to keep pace with the accelerated pace and rapid change of Internet-era development. Several agile methodologies have been developed in response -- and these approaches to software development are showing exceptional promise. In this book, Jim Highsmith covers them all -- showing what they have in common, where they differ, and how to choose and customize the best agile approach for your needs.KEY TOPICS:Highsmith begins by introducing the values and principles shared by virtually all agile software development methods. He presents detailed case studies from organizations that have used them, as well as interviews with each method's principal authors or leading practitioners. Next, he takes a closer look at the key features and techniques associated with each major Agile approach: Extreme Programming (XP), Crystal Methods, Scrum, Dynamic Systems Development Method (DSDM), Lean Development, Adaptive Software Development (ASD), and Feature-Driven Development (FDD). In Part III, Highsmith offers practical advice on customizing the optimal agile discipline for your own organization.MARKET:For all software developers, project managers, and other IT professionals seeking more flexible, effective approaches to developing software.

Glocalized Solutions for Sustainability in Manufacturing Jürgen Hesselbach,Christoph Herrmann,2011-03-19 The 18th CIRP International Conference on Life Cycle Engineering (LCE) 2011 continues a long tradition of scientific meetings focusing on the exchange of industrial and academic knowledge and experiences in life cycle assessment, product development, sustainable manufacturing and end-of-life-management. The theme "Glocalized Solutions for Sustainability in Manufacturing" addresses the need for engineers to develop solutions which have the potential to address global challenges by providing products, services and processes taking into account local capabilities and constraints to achieve an economically, socially and environmentally sustainable society in a global perspective. Glocalized Solutions for Sustainability in Manufacturing do not only involve products or services that are changed for a local market by simple substitution or the omitting of functions. Products and services need to be addressed that ensure a high standard of living everywhere. Resources required for manufacturing and use of such products are limited and not evenly distributed in the world. Locally available resources, local capabilities as well as local constraints have to be drivers for product- and process innovations with respect to the

entire life cycle. The 18th CIRP International Conference on Life Cycle Engineering (LCE) 2011 serves as a platform for the discussion of the resulting challenges and the collaborative development of new scientific ideas.

MT–PCR – A rapid, reliable and effective tool for assessing toxic 'algal' blooms in Victorian water supplies Aaron Jex,Louise Baker,Raechel Littman,2015-06-15 This project addressed a need for a sensitive, accurate and reliable testing method to aid assessment of the toxicity of algal blooms and assist water management. Increasingly, diagnostic dilemmas are resolved through the use of DNA-based technologies which often provide high sensitivity and specificity and are efficient both in terms of costs and time. However to date, no such test was available to the Victorian water industries. This project sought to bridge this gap by developing an automated DNA-based diagnostic assay for cyanobacterial bloom assessment blooms in Victorian waters. The assay exceeds expectation in its ability to accurately quantify levels of toxigenic cyanobacteria in bloom samples, retains exceptionally high specificity and sensitivity and each assay out-performs common conventional PCR approaches established in the literature. Four toxigen assays (microcystin, nodularin, cylindrospermopsin and saxitoxin) were designed, tested and optimised. This book is co-published with Water Research Australia Authors: Aaron Jex, Louise Baker and Raechel Littman, University of Melbourne
