Sacred Biography Thomas J. Heffernan, 1992-10-01 Though medieval saints' lives are among the oldest literary texts of Western vernacular culture, they are routinely patronized as pious fiction by modern historiography. This book demonstrates that to characterize the genre as fiction is to misunderstand the intentions of medieval authors, who were neither credulous fools nor men blinded by piety. Concentrating on English texts, Heffernan reconstructs the medieval perspective and considers sacred biography in relation to the community for which it was written; identifies the genre's rhetorical practices and purposes; and demonstrates the syncretistic way in which the life of the medieval saint was transformed from oral tales to sacred text. In the process, Heffernan not only achieves a more contextually accurate understanding of the medieval saints' lives, but details a new critical method that has important implications for the practice of textual criticism.

Royal Naval Biography, Volume 1 Part 1 John Marshall, 1823 John Marshall (c.1784-1837) was a naval officer and biographer. He first went to sea at the age of nine, and by the end of the Napoleonic Wars in 1815 had reached the rank of lieutenant. After the war, he started to research the lives of contemporary high-ranking naval officers, some of whose service reached as far back as 1760. These volumes, first published between 1823 and 1830, contain the results of this monumental research, and demonstrate the new 'cult' of the navy in the early nineteenth century. Some of the biographies were contributed by the officers themselves, with others containing private or official letters and other records. Organised according to seniority in rank, these volumes contain a wealth of fascinating information on the careers of naval officers and battles and wars in which they took part. Volume 1, Part 1 contains biographies of flag officers.

Antiemetic Therapy Josef Donnerer, 2003-01-01 Prevention and treatment of nausea and emesis are important issues in a patients wellbeing in the clinical setting as well as for the outpatient. Various and still partly unresolved pathomechanisms play a role in nausea and emesis in humans. It is therefore important to compare results from preclinical research in animal models with results from clinical studies. This book combines an overview of the preclinical research on antiemetic drugs and state-of-the art reviews on the prevention and treatment of nausea and emesis. Established treatment regimens are compared with new interesting compounds in clinical trials. An up-to-date overview of the selection of antiemetic drugs, of their dosage and route of administration is given for clinical conditions such as emetogenic anti-cancer chemotherapy, radiation therapy, surgery, and hyperemesis gravidarum. The treatment of nausea and emesis in opioid therapy and in motion sickness is equally outlined. Whereas this book should serve the clinician in making the right choice for every patients need, it also pays significant attention to the interests of scientists in the fields of oncology, nutrition, gastroenterology, obstetrics and gynecology as well as anaesthesia.

Reproductive Sciences in Animal Conservation William V. Holt, Janine L. Brown, Pierre Comizzoli, 2014-08-04 Reproductive biology is more than the development of techniques for helping with too little or too much breeding. While some of the relevant techniques are useful for individual species, technical developments have to be backed up by thorough biological understanding of the background behind the problems. This book is therefore threefold; (1) it provides a snapshot of the state of the art in terms of species-specific reproductive technologies, whether for individual animals or whole taxonomic groups; (2) it sets the reproductive problems in context and emphasizes the links between animal-based problems and the wider world, e.g. reproductive fitness and (3) it looks forward and presents realistic assessments of how effective some of the more recently developed techniques in reproductive technology might be at combating extinctions. This is a wide-ranging book that will be relevant to anyone involved in reproductive biology or in species conservation and provides provide them some useful perspectives about the real utility of current and emerging technologies.
