The Future of Translation Technology Chan Sin-wai,2016-10-26 Technology has revolutionized the field of translation, bringing drastic changes to the way translation is studied and done. To an average user, technology is simply about clicking buttons and storing data. What we need to do is to look beyond a system's interface to see what is at work and what should be done to make it work more efficiently. This book is both macroscopic and microscopic in approach: macroscopic as it adopts a holistic orientation when outlining the development of translation technology in the last forty years, organizing concepts in a coherent and logical way with a theoretical framework, and predicting what is to come in the years ahead; microscopic as it examines in detail the five stages of technology-oriented translation procedure and the strengths and weaknesses of the free and paid systems available to users. The Future of Translation Technology studies, among other issues: The Development of Translation Technology Major Concepts in Computer-aided Translation Functions in Computer-aided Translation Systems A Theoretical Framework for Computer-Aided Translation Studies The Future of Translation Technology This book is an essential read for scholars and researchers of translational studies and computational linguistics, and a guide to system users and professionals.

Advances in Digital Technologies J. Mizera-Pietraszko,S. Fong,2015-05-20 Easy access to digital information in every form is something which has become indispensable given our ever-increasing reliance on digital technology. But such access would not be possible without the reliable and effective infrastructure which has led to the large-scale development of web technologies. This book presents the 27 papers delivered at the 6th International Conference on Applications of Digital Information and Web Technologies (ICADIWT), held in February 2015, at the University of Macau, Macau. The book is divided into seven sections: Internet communication, human-computer interaction, adaptive web applications, data communication, cloud computing, systems engineering, and data mining. Since each paper is a survey contributed by different experts from very many countries, this book can be seen as a collection of the current research trends in the field and hence it will be of interest to all those whose work involves digital information and web technology.

Foreign Languages and Careers Lucille J. Honig,Richard I. Brod,1974 The purpose of the report is to explain why so many different types of people in so many different parts of the country need languages in their work, and why students planning their education in preparation for certain kinds of careers should be aware of these needs. The focus is mainly on language as an auxiliary skill, on the careers in which languages are most likely to be needed and on the ways in which foreign

language skills can help in individual jobs. Language as an auxiliary skill is considered in relation to: business, industry, and commerce; civil service; education; law; library science; media; science; service occupations; social sciences; and travel and tourism. Language as a primary skill is also described in the context of careers for language specialists in foreign language teaching and in interpreting and translating. A summary outlines the growing involvement of the U.S. in international business and the increasing importance of foreign languages in nearly every kind of occupation and their implications for students. A brief bibliography of publications relating to careers using languages and a list of useful addresses are appended. (Author/NH).
