Annual Energy Outlook 2012, with Projections To 2035 Energy Information Administration (U S),2012-10-04 The projections in the U.S. Energy Information Administration's (EIA's) Annual Energy Outlook 2012 (AE02012) focus on the factors that shape the U.S. energy system over the long term. Under the assumption that current laws and regulations remain unchanged throughout the projections, the AE02012 Reference case provides the basis for examination and discussion of energy production, consumption, technology, and market trends and the direction they may take in the future. It also serves as a starting point for analysis of potential changes in energy policies. But AE02012 is not limited to the Reference case. It also includes 29 alternative cases (see Appendix E, Table E1), which explore important areas of uncertainty for markets, technologies, and policies in the U.S. energy economy. Many of the implications of the alternative cases are discussed in the 'Issues in focus' section of this report. / Key results highlighted in AE02012 include continued modest growth in demand for energy over the next 25 years and increased domestic crude oil and natural gas production, largely driven by rising production from tight oil and shale resources. As a result, U.S. reliance on imported oil is reduced; domestic production of natural gas exceeds consumption, allowing for net exports; a growing share of U.S. electric power generation is met with natural gas and renewables; and energy-related carbon dioxide emissions remain below their 2005 level from 2010 to 2035, even in the absence of new Federal policies designed to mitigate greenhouse gas (GHG) emissions.--Executive Summary (p. 2).

Basics of Geomatics Mario A. Gomarasca,2009-09-18 Geomatics is a neologism, the use of which is becoming increasingly widespread, even if it is not still universally accepted. It includes several disciplines and techniques for the study of the Earth's surface and its environments, and computer science plays a decisive role. A more meaningful and appropriate expression is Geo-spatial Information or GeoInformation. Geo-spatial Information embeds topography in its more modern forms (measurements with electronic instrumentation, sophisticated techniques of data analysis and network compensation, global satellite positioning techniques, laser scanning, etc.), analytical and digital photogrammetry, satellite and airborne remote sensing, numerical cartography, geographical information systems, decision support systems, WebGIS, etc. These specialized fields are intimately interrelated in terms of both the basic science and the results pursued: rigid separation does not allow us to discover several common aspects and the fundamental importance assumed in a search for solutions in the complex survey context. The objective pursued by Mario A. Gomarasca, one that is only apparently modest, is to publish an integrated text on the surveying theme, containing simple and comprehensible concepts relevant to experts in Geo-spatial Information and/or specifically in one of the disciplines that compose it. At the same time, the book is rigorous and synthetic, describing with precision the main instruments and methods connected to the multiple techniques available today.

Theory of Heat Pipes T. P. Cotter,1965 A heat pipe is a self-contained structure which achieves very high thermal conductance by means of two-phase fluid flow with capillary circulation. A quantitative engineering theory for the design and performance analysis of heat pipes is given.

Bio-inspired Computation in Unmanned Aerial Vehicles Haibin Duan,Pei Li,2014-01-02 Bio-inspired Computation in Unmanned Aerial Vehicles focuses on the aspects of path planning, formation control, heterogeneous cooperative control and vision-based surveillance and navigation in Unmanned Aerial Vehicles (UAVs) from the perspective of bio-inspired computation. It helps readers to gain a comprehensive understanding of control-related problems in UAVs, presenting the latest advances in bio-inspired computation. By combining bio-inspired computation and UAV control problems, key questions are explored in depth, and each piece is content-rich while remaining accessible. With abundant illustrations of simulation work, this book links theory, algorithms and implementation procedures, demonstrating the simulation results with graphics that are intuitive without sacrificing academic rigor. Further, it pays due attention to both the conceptual framework and the implementation procedures. The book offers a valuable resource for scientists, researchers and graduate students in the field of Control, Aerospace Technology and Astronautics, especially those interested in artificial intelligence and Unmanned Aerial Vehicles. Professor Haibin Duan and Dr. Pei Li, both work at Beihang University (formerly Beijing University of Aeronautics & Astronautics, BUAA). Prof Duan's academic website is: <http://hbduan.buaa.edu.cn>

Optical Fiber Sensor Technology L.S. Grattan,B.T. Meggitt,2013-03-09 Environmental and chemical sensors in optical fiber sensor technology The nature of the environment in which we live and work, and the precarious state of many aspects of the natural environment, has been a major lesson for scientists over the last few decades. Public awareness of the issues involved is high, and often coupled with a scepticism of the ability of the scientist and engineer to provide an adequate, or even rapid solution to the preservation of the environment before further damage is done, and to achieve this with a minimum of expenditure. Monitoring of the various aspects of the environment, whether it be external or internal to ourselves and involving chemical, physical or biomedical parameters is an essential process for the well-being of mankind and of the individual. Legislative requirements set new standards for measurement and control all around us, which must be met by the most appropriate of the technologies available, commensurate with the costs involved. Optical fiber sensor technology has a major part to play in this process, both to complement existing technologies and to promote new solutions to difficult measurement issues. The developments in new sources and detectors covering wider ranges of the electromagnetic spectrum, with higher sensitivity, allow the use of techniques that some time ago would have been considered inappropriate or lacking in sufficient sensitivity.

Colonial Situations George W. Stocking,1991-10-01 As European colonies in Asia and Africa became independent nations, as the United States engaged in war in Southeast Asia and in covert operations in South America, anthropologists questioned their interactions with their subjects and worried about the political consequences of government-supported research. By 1970, some spoke of anthropology as "the child of Western imperialism" and as "scientific colonialism." Ironically, as the link between anthropology and colonialism became more widely accepted within the discipline, serious interest in examining the history of anthropology in colonial contexts diminished. This volume is an effort to initiate a critical historical consideration of the varying "colonial situations" in which (and out of which) ethnographic knowledge essential to anthropology has been produced. The essays comment on ethnographic work from the middle of the nineteenth century to nearly the end of the twentieth, in regions from Oceania through southeast Asia, the Andaman Islands, and southern Africa to North and South America. The "colonial

situations” also cover a broad range, from first contact through the establishment of colonial power, from District Officer administrations through white settler regimes, from internal colonialism to international mandates, from early “pacification” to wars of colonial liberation, from the expropriation of land to the defense of ecology. The motivations and responses of the anthropologists discussed are equally varied: the romantic resistance of Maclay and the complicity of Kubary in early colonialism; Malinowski’s salesmanship of academic anthropology; Speck’s advocacy of Indian land rights; Schneider’s grappling with the ambiguities of rapport; and Turner’s facilitation of Kaiapo cinematic activism. “Provides fresh insights for those who care about the history of science in general and that of anthropology in particular, and a valuable reference for professionals and graduate students.”—Choice “Among the most distinguished publications in anthropology, as well as in the history of social sciences.”—George Marcus, *Anthropologica*

Treasures from the Ark Vrej Nersessian, 2001-06-21 Armenia was the first country to recognize Christianity as the official state religion in 301 AD, twelve years before Constantine's decree granting tolerance to Christianity within the Roman Empire. Ever since, Armenia has claimed the privilege of being the first Christian nation, and the wealth of Christian art produced in Armenia since then is testimony to the fundamental importance of the Christian faith to the Armenian people. This extensive new survey of Armenian Christian art, published to accompany a major exhibition at The British Library, celebrates the Christian art tradition in Armenia during the last 1700 years. The extraordinary quality and range of Armenian art which is documented includes sculpture, metalwork, textiles, ceramics, wood carvings and illuminated manuscripts and has been drawn together from collections throughout the world—many of the examples have never before been seen outside Armenia. In his authoritative text, Dr. Vrej Nersessian, Curator at The British Library, charts the development of Christianity in Armenia. This fascinating history is essential to an understanding of the art and religious tradition of Armenia, a country in which the sense of the sacred extends well beyond the purely religious, infiltrating the entire fabric of Armenian affairs to create a fascinating culture. This sumptuously illustrated book will be of immense value to anyone with an interest in Byzantine art and culture, the history of Christianity and the history of Armenia and the Middle Orient.

Dynamics of Technological Change Girifalco, 2012-12-06 Technology is not an end in itself, but a way of satisfying human wants. It shows us how to solve the age-old economic problem of surviving and prospering in a hard world. But to optimize the benefits of technological advance requires an understanding of how it happens. The purpose of this book is to provide some of that understanding. The subject is so enormous and so intertwined with every human activity that a small selection of it, and that from a special viewpoint, is inevitable. The selection of subject matter has been, of course, conditioned by what interests me and is somewhat heterogeneous. However, it is connected by two major themes. The first is that it emphasizes the dynamic nature of technology, in the sense that it must be approached as a process evolving in time that can often be described in quantitative terms. The second is that I have chosen topics that I believe are essential for a strategic sense of how to plan for, execute, and respond to technological change. These two themes complement each other because the strategic sense requires an appreciation of the dynamics and the dynamics naturally lead to a consideration of how to deal with technology so that it can be used to achieve human objectives. The unifying thought behind the book is that technological change has a systemic as well as an idiosyncratic aspect.
