The Effect of Atomic Weapons on Glazing and Window Construction Walton C. Clark,1955 This investigation was undertaken to determine the relative resistance of different types of commercial windows and glazing to an atomic blast, also to determine what degree of protection from flying glass is provided by Venetian blinds, insect screens, and wire netting. Various types of windows glazed with plastic and different kinds of glass were installed on four sides of a test structure, which was exposed to the blast of an atomic weapon. The photographic record and detailed description of the windows before and after the blast included in this report provide a basis for evaluating comparative damage.

Biofluids Modeling Wilson Chin,Jamie Chin,2023-12-27 BIOFLUIDS MODELING The first book offering analytical and modern computational solutions to important biofluids problems, such as non-Newtonian flows in blood vessels, clogged arteries and veins, bifurcated arteries and veins, arbitrary stent geometries, tissue properties prediction, and porous media Darcy flow simulation in large-scale organ analysis, this is a must-have for any library. This book introduces new methods for biofluids modeling and biological engineering. The foregoing subjects are treated rigorously, with all modeling assumptions stated and solutions clearly derived. But that's not all. Key supporting physics-based ideas, algorithmic details, and software design interfaces are equally emphasized, in order to support our overriding objective of getting the anatomical and clinical information that physicians need. Importantly, this volume provides a self-contained exposition that includes all required biological concepts, plus the background preparation needed in fluid mechanics, basic differential equations, and modern numerical analysis. The presentation style will appeal to medical practitioners, researchers, biomedical engineers, and students interested in quantitative fluid flow modeling, as well as engineering students eager to learn about advances in a rapidly growing and changing biological science. As such, the book represents "must-reading" suitable at the advanced undergraduate level, and motivated readers should be able to embark on related research following guided study.
