Nearshore Sediment Transport R.J. Seymour,2013-11-11 This book represents the efforts of over a hundred individuals who planned and

executed the NSTS field experiments, analyzed the billions of data points, and distilled their findings and insights into the summaries found here.

Because these experiments were of a scope that will seldom, if ever, be duplicated, and because the program brought together many of the foremost

field experimentalists in this country, we all felt from the beginning that it was important to preserve the outcome. This was done in two ways. First,

the raw data were made available to any interested investigator within 18 months of the completion of each experiment. Secondly, both the

methodology of the experiments and the findings from them were codified in the form of a monograph. This book is that result. I have had the

occasion recently (Sediments '87 Proceedings, Vol. 1, pp. 642-651) to assess the NSTS performance. I found that we made giant strides in our

understanding of the surf zone hydrodynamics --far more than our fondest expectations at the beginning. We were able to do less than we had hoped

about the response of the sediment, largely because of a limited ability to measure it at a point. As I reported in the Sediments '87 assessment, we

established a new state of the art in measurement techniques and we demonstrated the effectiveness of large, multi-investigator, instrument-

intensive experiments for studying nearshore processes.

Dynamic Vulnerability Assessment and Intelligent Control José Luis Rueda-Torres,Francisco González-Longatt,2018-03-19 Identifying,

assessing, and mitigating electric power grid vulnerabilities is a growing focus in short-term operational planning of power systems. Through

illustrated application, this important guide surveys state-of-the-art methodologies for the assessment and enhancement of power system security in

short term operational planning and real-time operation. The methodologies employ advanced methods from probabilistic theory, data mining,

artificial intelligence, and optimization, to provide knowledge-based support for monitoring, control (preventive and corrective), and decision making

tasks. Key features: Introduces behavioural recognition in wide-area monitoring and security constrained optimal power flow for intelligent control

and protection and optimal grid management. Provides in-depth understanding of risk-based reliability and security assessment, dynamic

vulnerability assessment methods, supported by the underpinning mathematics. Develops expertise in mitigation techniques using intelligent

protection and control, controlled islanding, model predictive control, multi-agent and distributed control systems Illustrates implementation in smart

grid and self-healing applications with examples and real-world experience from the WAMPAC (Wide Area Monitoring Protection and Control)

scheme. Dynamic Vulnerability Assessment and Intelligent Control for Power Systems is a valuable reference for postgraduate students and

researchers in power system stability as well as practicing engineers working in power system dynamics, control, and network operation and

planning.
