A Minimalist Theory of Simplest Merge Samuel D. Epstein, Hisatsugu Kitahara, T. Daniel Seely, 2021-09-28 This collection explicates one of the core ideas underpinning Minimalist theory – explanation via simplification – and its role in shaping some of the latest developments within this framework, specifically the simplest Merge hypothesis and the reduction of syntactic phenomena to third factor considerations. Bringing together recent papers on the topic by Epstein, Kitahara, and Seely, with one by Epstein, Seely and Obata, and one by Kitahara, the book begins with an introduction which situates the papers in a cohesive overview of some of the latest research on Minimalism, as facilitated by current theoretical developments. The volume integrates a historical overview of evolutions in Merge, starting with Chomsky's (pre-Merge) Aspects model up to current theoretical models, including a primer of Chomsky's most recent theory of Merge based on the concept of Workspace. The Minimalist notions of perfection and simplification are also outlined, providing clearly explicated coverage of key technical concepts within the framework as applied to grammatical phenomena. Taken as a whole, the collection both introduces and advances Minimalist theory for students and scholars in linguistics and related sub-disciplines of psychology, philosophy, and cognitive science, as well as offering new directions for future research for researchers in these fields.

**Mobile Tech Report 2015** John R. Roberts, 2015-02-23 If you read technology news, you'll notice it's not just a story of amazing new product introductions, or even that plus copycat product introductions. All the usual aspects of business are there: fierce competition, new contenders, old survivors, great ideas but business failures, mediocre ideas that somehow seem to succeed and prosper. As a reporter, commentator and blogger on mobile technology, I've collected what happened in the industry in 2014 and make predictions on what will and won't happen in 2015. You can read what did happen in the mobile technology in 2014. Often I deliver a comment with the news item and usually there is a link to the web page of the original announcement. This way you can dive into any detail level you desire, read my news feed for the overview or follow the related web link to the longer article. History is moving so fast now that it is all recorded electronically, but I'm surprised no one else has collected it and presented it for consideration. Here is 2013 from the mobile technology industry for your consideration along with my own observations and opinions about where things are headed. It's often overlooked that the technology industry is an industry. By that I mean its main concerns are profit and growth. As consumers we love the new products and unique abilities we are gaining from technology, but it is a business akin to any other, trying to seduce us to pry money out of our wallets. So I cover the horse race aspect of the business, who's up, who's down. Is that changing? Is that likely to change? The longer implications of what the technology industry is doing are vast and social. We are moving to an always on, always connected society where we can communicate with someone instantly and find an answer to any question quickly. The entire database of human knowledge is now available in the palm of your hand whenever you desire it. Everything is there, the good, the bad, right and wrong, hate and love, music and noise. We are obsessed with technology, not in and of itself, but as a means to an end. Technology is the means to satisfy our curiosity or even our desire for self-expression. We are taking photos machine gun-style with our smartphones and choose the few to share. As humans we are gathering ever more data about ourselves and sharing more about ourselves than we probably thought possible. Bill Gates was once asked why the computer industry had generated so much improvement in its products over a relatively few years. He gave some boring answer about Moore's Law, but the real answer is that computers are in their teenage years. They are growing and growing. They will not always do so. So too the technology industry is in a state of rapid change. I see the shift to smaller devices as a new paradigm, smashing some businesses and growing others into giants. Their stories are here in the news. In short here are predictions for what won't and will happen in 2015 for the mobile technology industry, breakdowns of marketshare figures on the horse

race aspect of the business, chapters on Apple, Samsung, Google, Microsoft, Nokia, Blackberry, Amazon, Yahoo, news about social media giants Facebook, Twitter, Google+, LinkedIn, Foursquare, SnapChat and the carriers themselves Verizon, AT&T, Sprint and T-Mobile. You can also review my 2014 mobile predictions and see my track record on predictions. Finally there are some essays on how all this mobile tech is figuring into our lives. I've divided the news into the subjects it covers, but also put in the appendix all the news as it came out in chronological ordering. You can read the firehose of events in the appendix, or just read about one topic at a time in the earlier chapters.

**Perspectives on the Architecture and Acquisition of Syntax** Gautam Sengupta, Shruti Sircar, Madhavi Gayathri Raman, Rahul Balusu, 2018-03-06 This festschrift volume brings together important contributions by expert syntacticians across the globe on tense and finiteness, adjectives, dative and ergative case, acquisition of case, and other topics both within the domain of Dravidian linguistics and in the broader theoretical understanding of cross-linguistic data. Professor R. Amritavalli, a renowned linguist, has spent over three decades in the fields of syntax and syntactic acquisition, making important and landmark contributions in these areas, and this book is a recognition of her work. The contributors cover these themes in the context of English, Chinese, Japanese, Korean, Hindi-Urdu, Bangla, Dravidian languages, and understudied languages like Huave. The analyses presented here have major implications for current theories of syntax and semantics, first and second language acquisition, language typology and historical linguistics, and will be a valuable resource for students, researchers and teachers.

*The Role of Formal Features in Second Language Acquisition* Juana Liceras, Helmut Zobl, Helen Goodluck, 2017-09-25 Using Chomsky's minimalist program as a framework, this volume explores the role of formal (or functional) features in current descriptions and accounts of language acquisition. In engaging, up-to-date articles, distinguished experts examine the role of features in current versions of generative grammar and in learnability theory as it relates to native, non-native, and impaired acquisition.

**Plant Proteomic Research 2.0** Setsuko Komatsu, 2019-06-24 Advancements in high-throughput "Omics" techniques have revolutionized plant molecular biology research. Proteomics offers one of the best options for the functional analysis of translated regions of the genome, generating a wealth of detailed information regarding the intrinsic mechanisms of plant stress responses. Various proteomic approaches are being exploited extensively for elucidating master regulator proteins which play key roles in stress perception and signaling, and these approaches largely involve gel-based and gel-free techniques, including both label-based and label-free protein quantification. Furthermore, post-translational modifications, subcellular localization, and protein-protein interactions provide deeper insight into protein molecular function. Their diverse applications contribute to the revelation of new insights into plant molecular responses to various biotic and abiotic stressors.

**Merger Masters** Kate Welling, Mario Gabelli, 2018-11-06 Merger Masters presents revealing profiles of monumentally successful merger investors based on exclusive interviews with some of the greatest minds to practice the art of arbitrage. Michael Price, John Paulson, Paul Singer, and others offer practical perspectives on how their backgrounds in the risk-conscious world of merger arbitrage helped them make their biggest deals. They share their insights on the discipline that underlies their fortunes, whether they practice the "plain vanilla" strategy of announced deals, the aggressive strategy of activist investment, or any strategy in between on the risk spectrum. Merger Masters delves into the human side of risk arbitrage, exploring how top practitioners deal with the behavioral aspects of generating consistent profits from risk arbitrage. The book also includes perspectives from the other side of the mergers and acquisitions divide in the form of interviews with a trio of iconic CEOs: Bill Stiritz, Peter McCausland, and Paul Montrone. All three took advantage of M&A opportunities to help build long-term returns but often found themselves at odds

with the short-term focus of Wall Street and merger investors. Told in lively, accessible prose, with bonus facts and figures for transaction junkies, *Merger Masters* is an incomparable set of stories with plenty of unfiltered lessons from the best managers of our time.

**The Passive in Japanese** Tomoko Ishizuka, 2012 This book describes and analyzes the passive voice system in Japanese within the framework of generative grammar. By unifying different types of passives conventionally distinguished within the literature, the book advances a simple minimalist account where various passive characteristics emerge from the lexical properties of a single passive morpheme interacting with independently-supported syntactic principles and general properties of Japanese. The book both reevaluates numerous properties previously discussed within the literature and introduces interesting new data collected through experiments. This novel analysis also benefits from considering the important issue of interspeaker variability, in terms of grammaticality judgments and context requirements, and its implications for individual grammar. The book will be of interest not only to students and scholars working on passive constructions, but more generally to scholars working on generative grammar, experimental syntax, language acquisition, and sentence processing.
