Selective Reproduction in the 21st Century Ayo Wahlberg, Tine M. Gammeltoft, 2017-08-12 This book explores how conditions for childbearing are changing in the 21st century under the impact of new biomedical technologies. Selective reproductive technologies (SRTs) - technologies that aim to prevent or promote the birth of particular kinds of children – are increasingly widespread across the globe. Wahlberg and Gammeltoft bring together a collection of essays providing unique ethnographic insights on how SRTs are made available within different cultural, socio-economic and regulatory settings and how people perceive and make use of these new possibilities as they envision and try to form their future lives. Topics covered include sex-selective abortions, termination of pregnancies following detection of fetal anomalies during prenatal screening, the development of preimplantation genetic diagnosis techniques as well as the screening of potential gamete donors by egg agencies and sperm banks. This is invaluable reading for scholars of medical anthropology, medical sociology and science and technology studies, as well as for the fields of gender studies, reproductive health and genetic disease research.

Cognitive Approaches to Tense, Aspect, and Epistemic Modality
Adeline Patard, Frank Brisard, 2011-07-28 This volume addresses

problems of semantics regarding the analysis of tense and aspect (TA) markers in a variety of languages, including Arabic, Croatian, English, French, German, Russian, Thai, and Turkish. Its main interest goes out to epistemic uses of such markers, whereby epistemic modality is understood as indicating “a degree of compatibility between the modal world and the factual world” (Declerck). All contributions, moreover, tackle these problems from a more or less cognitive point of view, with some of them insisting on the need to provide a unifying explanation for all usage types, temporal and non-temporal, and all of them accepting the premise that the semantics of TA categories essentially refers to subjective, rather than objective, concerns. The volume also represents one of the first attempts to gather accounts of TA marking (in various languages) that are explicitly set within the framework of Cognitive Grammar. Ultimately, this volume aims to contribute to establishing an awareness that modal meaning elements are directly relevant to the analysis of the grammar of time.

Dorothea Lange: A Life Beyond Limits Linda Gordon, 2010-10-11
Winner of the 2010 Bancroft Prize and finalist for the 2009 Los Angeles Times Book Prize in Biography: The definitive biography of a heroic chronicler of America's Depression and one of the twentieth century's greatest photographers. We all know Dorothea Lange's iconic photos—the Migrant Mother holding her child, the shoeless children of the Dust Bowl—but now renowned American historian Linda Gordon brings them to three-dimensional life in this groundbreaking exploration of Lange's transformation into a documentarist. Using Lange's life to anchor a moving social history of twentieth-century America, Gordon masterfully re-creates bohemian San Francisco, the Depression, and the Japanese-American internment camps. Accompanied by more than one hundred images—many of

them previously unseen and some formerly suppressed—Gordon has written a sparkling, fast-moving story that testifies to her status as one of the most gifted historians of our time. Finalist for the Los Angeles Times Book Prize; a New York Times Notable Book; New Yorker's A Year's Reading; and San Francisco Chronicle Best Book.

Intimate Enemies Aaron Bobrow-Strain, 2007-06-27 *Intimate Enemies* is the first book to explore conflicts in Chiapas from the perspective of the landed elites, crucial but almost entirely unexamined actors in the state's violent history. Scholarly discussion of

agrarian politics has typically cast landed elites as “bad guys” with predetermined interests and obvious motives. Aaron Bobrow-Strain takes the landowners of Chiapas seriously, asking why coffee planters and cattle ranchers with a long and storied history of violent responses to agrarian conflict reacted to land invasions triggered by the Zapatista Rebellion of 1994 with quiescence and resignation rather than thugs and guns. In the process, he offers a unique ethnographic and historical glimpse into conflicts that have been understood almost exclusively through studies of indigenous people and movements. Weaving together ethnography, archival research, and cultural history, Bobrow-Strain argues that prior to the upheavals of 1994 landowners were already squeezed between increasingly organized indigenous activism and declining political and economic support from the Mexican state. He demonstrates that indigenous mobilizations that began in 1994 challenged not just the economy of estate agriculture but also landowners’ understandings of progress, masculinity, ethnicity, and indigenous docility. By scrutinizing the elites’ responses to land invasions in relation to the cultural politics of race, class, and gender, Bobrow-Strain provides timely insights into policy debates surrounding the recent global resurgence of peasant land reform movements. At the same time, he rethinks key theoretical frameworks that have long guided the study of agrarian politics by engaging political economy and critical human geography’s insights into the production of space. Describing how a carefully defended world of racial privilege, political dominance, and landed monopoly came unglued, *Intimate Enemies* is a remarkable account of how power works in the countryside.

Linux for Networking Professionals Rob VandenBrink, 2021-11-11
Get to grips with the most common as well as complex Linux

networking configurations, tools, and services to enhance your professional skills

Key Features Learn how to solve critical networking problems using real-world examples Configure common networking services step by step in an enterprise environment Discover how to build infrastructure with an eye toward defense against common attacks

Book Description As Linux continues to gain prominence, there has been a rise in network services being deployed on Linux for cost and flexibility reasons. If you are a networking professional or an infrastructure engineer involved with networks, extensive knowledge of Linux networking is a must. This book will guide you in building a strong foundation of Linux networking concepts. The book begins by covering various major distributions, how to pick the right distro, and basic Linux network configurations. You'll then move on to Linux network diagnostics, setting up a Linux firewall, and using Linux as a host for network services. You'll discover a wide range of network services, why they're important, and how to configure them in an enterprise environment. Finally, as you work with the example builds in this Linux book, you'll learn to configure various services to defend against common attacks. As you advance to the final chapters, you'll be well on your way towards building the underpinnings for an all-Linux datacenter. By the end of this book, you'll be able to not only configure common Linux network services confidently, but also use tried-and-tested methodologies for future Linux installations. What you will learn

Use Linux as a troubleshooting and diagnostics platform Explore Linux-based network services Configure a Linux firewall and set it up for network services Deploy and configure Domain Name System (DNS) and Dynamic Host Configuration Protocol (DHCP) services securely Configure Linux for load balancing,

authentication, and authorization services
Use Linux as a logging platform for network monitoring
Deploy and configure Intrusion Prevention Services (IPS)
Set up Honeypot solutions to detect and foil attacks
Who this book is for This book is for IT and Windows professionals and admins looking for guidance in managing Linux-based networks. Basic knowledge of networking is necessary to get started with this book.

Near-infrared Speckle Contrast Diffuse Correlation Tomography for Noncontact Imaging of Tissue Blood Flow Distribution Daniel Irwin, Siavash Mazdeyasna, Chong Huang, Mehrana Mohtasebi, Xuhui Lui, Lei Chen, Guoqiang Yu, 2022-11-07
Imaging of tissue blood flow (BF) distributions provides vital information for the diagnosis and therapeutic monitoring of various vascular diseases. The innovative near-infrared speckle contrast diffuse correlation tomography (scDCT) technique produces full 3D BF distributions. Many advanced features are provided over competing technologies including high sampling density, fast data acquisition, noninvasiveness, noncontact, affordability, portability, and translatability across varied subject sizes. The basic principle, instrumentation, and data analysis algorithms are presented in detail. The extensive applications are summarized such as imaging of cerebral BF (CBF) in mice, rat, and piglet animals with skull penetration into deep brain. Clinical human testing results are described by recovery of BF distributions on preterm infants (CBF) through incubator wall, and on sensitive burn tissues and mastectomy skin flaps without direct device-tissue interactions. Supporting activities outlined include integrated capability for acquiring surface curvature information, rapid 2D blood flow mapping, and optimizations via tissue-like phantoms and computer simulations. These applications and activities both highlight and guide the reader

as to the expected abilities and limitations of scDCT for adapting into their own preclinical/clinical research, use in constrained environments (i.e., neonatal intensive care unit bedside), and use on vulnerable subjects and measurement sites.
