Life Pulse Massage Mantak Chia, Aisha Sieburth, 2015-08-15 A fully illustrated guide to abdominal massage for improved cardiovascular health, organ detoxification, and enhanced vital energy • Includes fully illustrated massage instructions to open restricted blood vessels, direct blood flow for healing, balancing blood pressure, and detoxifying organs • Details specific massage treatments for many common ailments such as lower back pain, sciatica, asthma, headaches, and reproductive issues • Explains the ancient art of reading pulses to diagnose organ health • Reveals how blood acts as the vehicle for our vital energy Blood and chi often flow side by side throughout the body, the blood acting as the vehicle for our vital energy. Areas of slow or congested circulation lead to blockages in the flow of vital energy and toxin accumulation in the body. The practice of Life Pulse Massage allows these blockages to be cleared, revitalizing cardiovascular function, detoxifying the organs, and restoring the flow of blood and chi throughout the body. In this fully illustrated guide to Life Pulse Massage, Master Mantak Chia details abdominal massage practices to open restricted blood vessels, direct blood flow to specific areas for healing, release arterial tension to rebalance high or low blood pressure, and detoxify individual organs and body systems such as the liver, lungs, lymph nodes, and colon. He shows how to clear and activate the master pulses of the navel and aorta and synchronize these master pulses with the 52 pulses of the whole body for optimum circulation and energy balance. He explains the ancient art of reading pulses to diagnose organ health as well as how to recognize internal health states through the unique positions and shapes of the navel. Detailing specific Life Pulse Massage treatments for many common ailments such as lower back pain, sciatica, asthma, headaches, and reproductive issues, Master Chia shows how liberating the flow of blood and chi can prevent illness before it takes hold, revitalize the organs, and set the stage for optimum health.

The Pulse Classic Shuhe Wang,1997 The Mai Jing or Pulse Classic was written in the late Han dynasty by Wang Shuhe. It is the first book in the Chinese medical literature entirely devoted to pulse diagnosis. As such, it is the undeniable and necessary foundation text for anyone seriously interested in understanding the rationale for and method of reading the pulse in Chinese medicine. Although not an easy read, this book is a mine of valuable information for those wishing to go more deeply into a study of the pulse.

High Energy and Short Pulse Lasers Richard Viskup,2016-09-07 This book gives the readers an introduction to experimental and theoretical knowledge acquired by large-scale laser laboratories that are dealing with extra-high peak power and ultrashort laser pulses for research of terawatt (TW), petawatt (PW), or near-future exawatt (EW) laser interactions, for soft X-ray sources, for acceleration of particles, or for generation of hot dense thermal plasma for the laser fusion. The other part of this book is dealing with the small-scale laser laboratories that are using for its research on commercial sources of laser radiation, nanosecond (ns), picosecond (ps), or femtosecond (fs) laser pulses, either for basic research or for more advanced applications. This book is divided into six main sections dealing with short and ultrashort laser pulses, laser-produced soft X-ray sources, large-scale high-power laser systems, free-electron lasers, fiber-based sources of short optical pulse, and applications of short pulse lasers. In each chapter readers can find fascinating topics related to the high energy and/or short pulse laser technique. Individual chapters should serve the broad spectrum of readers of different expertise, layman, undergraduate and postgraduate students, scientists, and engineers, who may in this book find easily explained fundamentals as well as advanced principles of particular subjects related to these phenomena.

are the focus of great attention in the computing industry, as they are seen as the future of computing. The design of such devices presents many technical challenges. This book is the first guide available that describes how to design internet access and communications capabilities into embedded systems. It takes an integrated hardware/software approach using the Java programming language and industry-standard microcontrollers. Numerous illustrations and code examples enliven the text. This book shows how to build various sensors and control devices that connect to the TINI interfaces, explains how to write programs that control them in Java, and then ties them all together in practical applications. Included is a discussion on how these technologies work, where to get detailed specifications, and ideas for the reader to pursue beyond the book. Few-Cycle Laser Pulse Generation and Its Applications Franz X. Kärtner, 2004-09-14 This book covers the physics, technology and applications of short pulse laser sources that generate pulses with durations of only a few optical cycles. The basic design considerations for the different systems such as lasers, parametric amplifiers and external compression techniques which have emerged over the last decade are discussed to give researchers and graduate students a thorough introduction to this field. The existence of these sources has opened many new fields of research that were not possible before. These are UV and EUV generation from table-top systems using highharmonic generation, frequency metrology enabling optical frequency counting, high-resolution optical coherence tomography, strong-field ultrafast solid-state processes and ultrafast spectroscopy, to mention only a few. Many new applications will follow. The book attempts to give a comprehensive, while not excessive, introduction to this exciting new field that serves both experienced researchers and graduate students entering the field. The first half of the book covers the current physical principles, processes and design guidelines to generate pulses in the optical range comprising only a few cycles of light. Such as the generation of relatively low energy pulses at high repetition rates directly from the laser, parametric generation of medium energy pulses and high-energy pulses at low repetition rates using external compression in hollow fibers. The applications cover the revolution in frequency metrology and high-resolution laser spectroscopy to electric field synthesis in the optical range as well as the emerging field of high-harmonic generation and attosecond science, high-resolution optical imaging and novel ultrafast dynamics in semiconductors. These fields benefit from the strong electric fields accompanying these pulses in solids and gases during events comprising only a few cycles of light.
