The Pantheon of Uruk During the Neo-Babylonian Period Paul-Alain Beaulieu,2021-11-08 This book is about the pantheon of the Babylonian city of Uruk, between the 9th and 5th centuries BC. It is a careful analysis of the archive of the Eanna temple in Uruk, the sanctuary of the goddess Ishtar, containing well over 8,000 cuneiform tablets in the Akkadian language. The tablets date in their majority to the Neo-Babylonian and early Achaemenid period. Paul-Alain Beaulieu sheds light on the hierarchy of the local pantheon, providing a wealth of data concerning the cult of each deity, such as identity and theology, ornaments and clothing of the divine image, offerings ceremonies, temples, and cultic personnel. An important contribution to our knowledge of the functioning of religion in Neo-Babylonian society.

*Reliability and Maintainability (RAM) Training* Vincent R. Lalli, 2000 The theme of this manual is failure physics - the study of how products, hardware, software, and systems fail and what can be done about it. The intent is to impart useful information, to extend the limits of production capability, and to assist in achieving low-cost reliable products. In a broader sense the manual should do more. It should underscore the urgent need for mature attitudes toward reliability. Five of the chapters were originally presented as a classroom course to over 1000 Martin Marietta engineers and technicians. Another four chapters and three appendixes have been added. We begin with a view of reliability from the years 1940 to 2000. Chapter 2 starts the training material with a review of mathematics and a description of what elements contribute to product failures. The remaining chapters elucidate basic reliability theory and the disciplines that allow us to control and eliminate failures.
