Internal and External Stabilization of Linear Systems with Constraints Ali Saberi,Anton A. Stoorvogel,Peddapullaiah Sannuti,2012-06-21 Unifying two decades of research, this book is the first to establish a comprehensive foundation for a systematic analysis and design of linear systems with general state and input constraints. For such systems, which can be used as models for most nonlinear systems, the issues of stability, controller design, additional constraints, and satisfactory performance are addressed. The book is an excellent reference for practicing engineers, graduate students, and researchers in control systems theory and design. It may also serve as an advanced graduate text for a course or a seminar in nonlinear control systems theory and design in applied mathematics or engineering departments. Minimal prerequisites include a first graduate course in state-space methods as well as a first course in control systems design.

Game Theory Relunched Hardy Hanappi,2013-03-27 The game is on. Do you know how to play? Game theory sets out to explore what can be said about making decisions which go beyond accepting the rules of a game. Since 1942, a well elaborated mathematical apparatus has been developed to do so; but there is more. During the last three decades game theoretic reasoning has popped up in many other fields as well - from engineering to biology and psychology. New simulation tools and network analysis have made game theory omnipresent these days. This book collects recent research papers in game theory, which come from diverse scientific communities all across the world; they combine many different fields like economics, politics, history, engineering, mathematics, physics, and psychology. All of them have as a common denominator some method of game theory. Enjoy.

ICT Investment for Energy Use in the Industrial Sectors Nabaz T. Khayyat,2017-06-20 This book investigates the impact of production input factors on the market, consumer and producer energy demand characteristics in 30 industrial sectors for South Korea over the period 1980–2009, and for Japan over the period 1973-2006, with special emphasis placed on the effects of ICT investment on the demand for energy. A dynamic factor demand model is developed, accounting for the adjustment costs that are defined in terms of forgone output from current production. It addresses four key aspects of production and energy demand in manufacturing: first, it establishes the various relationships between different factors of production. Second, it investigates whether the energy demand in the industrial sectors in South Korea would be decreased or increased by substituting/complementing with other input factors such as ICT capital and labor. Third, it looks at sources of growth in the industrial sectors through decomposing the Divisia index based total factor productivity (TFP). Finally it provides appropriate policy recommendations based on these findings. The results of this study may provide industrial sectors' stakeholders and environmental and industrial policy makers with a flexible model that has the capacity to assess outcomes of various policies under certain scenarios. The factor demand methodology described in this book is very advanced and up-to-date. It can be used when teaching advanced graduate courses and in empirically advanced research. Therefore, it is highly relevant in both teaching as a main or supplementary

text and in particular as a reference handbook in conducting empirical research. The focus on ICT effects on energy use makes this book an important addition to the existing literature on industrial development.

Optimization and Its Applications in Control and Data Sciences Boris Goldengorin, 2016-09-29 This book focuses on recent research in modern optimization and its implications in control and data analysis. This book is a collection of papers from the conference "Optimization and Its Applications in Control and Data Science" dedicated to Professor Boris T. Polyak, which was held in Moscow, Russia on May 13-15, 2015. This book reflects developments in theory and applications rooted by Professor Polyak's fundamental contributions to constrained and unconstrained optimization, differentiable and nonsmooth functions, control theory and approximation. Each paper focuses on techniques for solving complex optimization problems in different application areas and recent developments in optimization theory and methods. Open problems in optimization, game theory and control theory are included in this collection which will interest engineers and researchers working with efficient algorithms and software for solving optimization problems in market and data analysis. Theoreticians in operations research, applied mathematics, algorithm design, artificial intelligence, machine learning, and software engineering will find this book useful and graduate students will find the state-of-the-art research valuable.

Innovation, Economic Growth and the Firm Jean-Luc Gaffard, Evens Salies, 2010 'Gaffard and Salies have brought together an outstanding collection of papers that connects two fields of research usually only considered in isolation: the entrepreneurial restructuring of firms and markets and the growth process of the firm. Recognizing the interaction between the two is crucial for understanding how economic progress comes about today. What leading scholars from each of the fields have to say in this book on the connection makes for a most stimulating and illuminating reading with great relevance for policy making in Europe and America.' -Ulrich Witt, Max Planck Institute of Economics and University of Jena, Germany --

Testing Software and Systems Khaled El-Fakih, Gerassimos Barlas, Nina Yevtushenko, 2015-11-07 This book constitutes the refereed proceedings of the 27th IFIP WG 6.1 International Conference on Testing Software and Systems, ICTSS 2015, held in Sharjah and Dubai, United Arab Emirates, in November 2015. The 14 revised full papers and 4 short papers presented were carefully reviewed and selected from 42 submissions. The papers are organized in topical sections on model based testing, test derivation methods, monitoring and fault localization, model and system testing, and real-time systems.

Fluctuations in Markov Processes Tomasz Komorowski, Claudio Landim, Stefano Olla, 2012-07-05 The present volume contains the most advanced theories on the martingale approach to central limit theorems. Using the time symmetry

properties of the Markov processes, the book develops the techniques that allow us to deal with infinite dimensional models that appear in statistical mechanics and engineering (interacting particle systems, homogenization in random environments, and diffusion in turbulent flows, to mention just a few applications). The first part contains a detailed exposition of the method, and can be used as a text for graduate courses. The second concerns application to exclusion processes, in which the duality methods are fully exploited. The third part is about the homogenization of diffusions in random fields, including passive tracers in turbulent flows (including the superdiffusive behavior). There are no other books in the mathematical literature that deal with this kind of approach to the problem of the central limit theorem. Hence, this volume meets the demand for a monograph on this powerful approach, now widely used in many areas of probability and mathematical physics. The book also covers the connections with and application to hydrodynamic limits and homogenization theory, so besides probability researchers it will also be of interest also to mathematical physicists and analysts.

Business Models and ICT Technologies for the Fashion Supply Chain Rinaldo Rinaldi, Romeo Bandinelli, 2018-09-28 This book presents high-quality original contributions on the fashion supply chain. A wide spectrum of application domains are covered, processing of big data coming from digital and social media channels, fashion new product development, fashion design, fashion marketing and communication strategy, business models and entrepreneurship, e-commerce and omni-channel management, corporate social responsibility, new materials for fashion product, wearable technologies. The contents are based on presentations delivered at IT4Fashion 2017, the 7th International Conference in Business Models and ICT Technologies for the Fashion Supply Chain, which was held in Florence, Italy, in April 2017, and at IT4Fashion 2018, the 8th edition of the same conference, which was held in Florence, Italy, in April 2018. This conference series represents a targeted response to the growing need for research that reports and debates supply chain business models and technologies applied to the fashion industry, with the aim of increasing knowledge in the area of product lifecycle management and supply chain management in that industry.

Greening Growth in Pakistan through Transport Sector Reforms Ernesto Sánchez-Triana, Javaid Afzal, Dan Biller, Sohail Malik, 2013-07-18 This book identifies reforms that can help manage environmental priority problems associated with transport's impacts on air quality, noise pollution, road safety, hazardous-materials transport, climate change, and urban sprawl. The policy options are contextualized in light of the Government of Pakistan's 2011 Framework for Economic Growth and its strategic objectives. Appendixes A–D present additional background information, describe the economic and institutional analyses undergirding this report, and detail the report's methodology. This analytical work by a team of World Bank specialists focuses on:

- analyzing the policy and institutional adjustments required to address environmental, social, and poverty aspects of increased transportation efficiency in Pakistan;
- identifying policy options for the Government of Pakistan to better serve the population, to enhance social cohesion, and to foster equitable benefit sharing with low-income or other vulnerable groups;
- developing a broad participatory process to give a voice to stakeholders who could be affected by enhancements of freight transport productivity; and

- making robust recommendations to strengthen governance and the institutional capacity of agencies to manage the environmental, social, and poverty consequences of freight transportation infrastructure.

Decentralization in Infinite Horizon Economies Mukul Majumdar, 2015-10-08
Decentralization in Infinite Horizon Economies brings together a collection of essays that attempt to explore one of the basic themes in microeconomics – can a decentralized economy attain an efficient or optimal allocation of resources when it is allowed to evolve without a predetermined terminal date? The failure of a price-guided competitive system to ensure efficiency/Pareto optimality with an infinite horizon was exposed by Malinvaud and Samuelson. Subsequent research, reported in this volume, achieved a deeper understanding of the problem, and obtained definitive results that are of interest in a much broader framework.
