Structured Documents J. André,Richard Keith Furuta,V. Quint,1989-03-23 This volume explores the structured representation of documents in computer document preparation systems. Using this approach to documents allows their logical structure to be represented both descriptively and analytically. Papers from major authorities in the field have been selected to form a unified whole. The book presents various models that can be used for representing documents within electronic publishing software and shows the advantages that can be drawn from a high level representation. Viewpoints of the typographer, linguist, and computer scientist are provided.

The analysis and recommendations are grounded in the findings of the latest research. Document Computing: Technologies for Managing Electronic Document Collections brings together concepts, research, and practice from diverse areas including document computing, information retrieval, librarianship, records management, and business process re-engineering. It will be of value to anyone working in these areas, whether as a researcher, a developer, or a user. Document Computing: Technologies for Managing Electronic Document Collections can be used for graduate classes in document computing and related fields, by developers and integrators of document management systems and document management applications, and by anyone wishing to understand the processes of document management.

Intelligent Document Retrieval Udo Kruschwitz,2005-10-24 Collections of digital documents can nowadays be found everywhere in institutions, universities or companies. Examples are Web sites or intranets. But searching them for information can still be painful. Searches often return either large numbers of matches or no suitable matches at all. Such document collections can vary a lot in size and how much structure they carry. What they have in common is that they typically do have some structure and that they cover a limited range of topics. The second point is significantly different from the Web in general. The type of search system that we propose in this book can suggest ways of refining or relaxing the query to assist a user in the search process. In order to suggest sensible query modifications we would need to know what the documents are about. Explicit knowledge about the document collection encoded in some electronic form is what we need. However, typically such knowledge is not available. So we construct it automatically.

Document Processing and Retrieval Qianhong Liu,Peter A. Ng,2012-12-06 Document Processing and Retrieval: TEXPROS focuses on the design and implementation of a personal, customizable office information and document processing system called TEXPROS (a TEXt PROcessing System). TEXPROS is a personal, intelligent office information and document processing system for text-oriented documents. This system supports the storage, classification, categorization, retrieval and reproduction of documents, as well as extracting, browsing, retrieving and synthesizing information from a variety of documents. When using TEXPROS in a multi-user or distributed environment, it requires specific protocols for extracting, storing, transmitting and exchanging information. The authors have used a variety of techniques to implement TEXPROS, such as Object-Oriented Programming, Tcl/Tk, X-Windows, etc. The system can be used for many different purposes in many different applications, such as digital libraries, software documentation and information delivery. Audience: Provides in-depth, state-of-the-art coverage of information processing and retrieval, and documentation for such professionals as database specialists, information systems and software developers, and information providers.

Legislative XML for the Semantic Web Giovanni Sartor,Monica Palmirani,Enrico Francesconi,Maria Angela Biasiotti,2011-06-29 This volume examines the basic layers of the standard-based creation and usage of legislation. In particular, it addresses the identification of legislative documents, their structure, the basic metadata and legislative changes. Since mature technologies and established practices are already in place for these layers, a standard-based approach is a necessary aspect of the up-to-date management of legislative resources. Starting out with an overview of the context for the use of XML standards in legislation, the book next examines the rationale of standard-based management of legislative documents. It goes on to address such issues as naming, the Akoma-Ntoso document model, the contribution of standard-based document management to handling legislative dynamics, meta-standards and interchange standards. The volume concludes with a discussion of semantic resources and a review on systems and projects.

Multi-media Document Translation Jonathan Rosenberg,Mark Sherman,Ann Marks,Jaap Akkerhuis,2012-12-06 As part of the NSF's EXPRES project, the authors investigated ways to interchange multi-media documents among diverse systems. Their investigations led to an analysis and implementation of multi-media document format translation in general, and of the ODA standard in particular. ODA, Office Document Architecture, is a new ISO and CCITT international standard for representing multi- media documents. The results of their investigations are presented in this book. The book contains overview information about multi-media document architecture and formats, an introduction to ODA, detailed technical specifications on how to use ODA for multi-media document format translation, and the authors' experiences in implementing and using ODA. The book also contains a complete user manual for the authors' publically available ODA software: tool kits for manipulating ODA and raster formats, tools for examining ODA documents and sample translators between ODA and several other multi-media formats. This book provides comprehensive information about ODA for a large audience. Planners can get basic information about using ODA for interoperation of multi-media systems. Researchers receive detailed discussions about the advantages and problems of using ODA for document representation, format translation and archival storage. System designers can use the technical descriptions of translators and tools in specifying their own. System builders can easily obtain the software as a basis for prototyping and investigating their own ODA implementations.

Text and Context Susan Jones,2012-12-06 Text and Context: Document Storage and Processing describes information processing techniques, including those which do not appear in conventional textbooks on database systems. It focuses on the input, storage, retrieval and presentation of primarily textual information, together with auxiliary material about graphic and video data. There are chapters on text analysis as a basis for lexicography, full-text databases and information retrieval, the use of optical storage for both ASCII text and scanned document images, hypertext and multi-media systems, abstract document definition, and document formatting and imaging. The material is treated in an informal way with an emphasis on real applications and software. There are, among others, case studies from Reuters, British Airways, St. Bartholomew's Hospital, Sony, and HMSO. Relevant industry standards are discussed including ISO 9660 for CD-ROM file storage, CCITT Group4 data compression, the Standard Generalised Markup Language and Office Document Architecture, and the Postscript language. Readers will benefit from the way Susan Jones has brought together this information, in a logical sequence, to highlight the connections between related topics. This book will be of interest to second and third year undergraduates and MSc students in computer science, to B/TEC HTD final year computing and information science students either specialising in IT or taking an IT option, and to students taking courses in IT and in business computing systems.

Digital Documents and Issues in Document Retention Julian Gillespie,David Vaile,2004

Integrated Management of Technical Documentation Jirka Hoppe,2012-12-06 Writing documentation is an integral part of any technical product development. A significant amount of time is spent describing the product functionality, giving insights into technical details, providing maintenance instructions, specifying marketing information, writing user manuals, etc. As the creation of such documentation is generally a source of higher production costs, many large companies are realising the need to increase the efficiency of documentation handling. Simple documents consisting of only a few pages can be developed on simple systems. Basic components of such systems are an editor handling text and graphics, file storage, and a printer. Such configurations, however, are not sufficient to handle professional documentation as produced by larger companies. Detailed studies of technical documentation requirements have revealed that in particular the following functionality is not usually provided by such simple documentation systems: Technical documentation is often very large; documents having hundreds or even thousands of pages are not exceptional. Due to size and complexity, technical documentation is developed most often by a team of authors. A system for technical documentation has to provide functionality supporting the organisation of a group of authors. Technical documentation usually consists of many different documents combined into one large documentation for a particular product. The optimum organisation of the storage and retrieval of documents is crucial for the performance and acceptability of the system. The functionality offered by normal file systems is not adequate to organise complex systems.

Document Architecture in Open Systems: The ODA Standard Wolfgang Appelt,2012-12-06 In 1989, the ISO Standard 8613 Office Document Architecture (ODA) and Interchange Format was published. The Standard is intended for the interchange of documents in an Open Systems environment. ISO 8613 is technically identical to the CCITT Recommendations of the T.410 series called Open Document Architecture (ODA) and Interchange Format published in 1988. Almost all major companies in the office automation and telecommunication area are currently developing products based on this Standard. In this book, all important aspects of the presently publishedeight parts of the Standard are discussed. The book provides a comprehensiveand detailed introduction to the technical specifications of ISO 8613 and the concepts on which these specifications are based, including the extensions which were added to the ODA Standard in 1991. The book isprimarily addressed to readers who want to

investigate the applicability of the Standard for their document interchange problems, plan to acquire products based on the Standard, or intend to develop document processingsystems conforming to the Standard.

The papers are organized in topical sections on OCR features and systems, handwriting recognition, layout analysis, classifiers and learning, tables and forms, text extraction, indexing and retrieval, document engineering, and new applications.

Word 2007 Document Automation with VBA and VSTO Scott Driza,2009-03-26 This book focuses on innovative ways to create customized Word documents and templates. It contains an in-depth introduction to VBA (Visual Basic for Applications), which is the embedded programming language in the Microsoft Office 2007. VBA provides a complete integrated development environment (IDE) that allows for document automation, the process of using an automated template for creating documents. The book also includes coverage of the new features of Word 2007 including Content Controls, programming the Ribbon, and more.

Document Management for Hypermedia Design Piet A.M. Kommers,Alcindo F. Ferreira,Alex W. Kwak,2012-12-06 Migrating from paper-based to electronic documentation is a task that needs careful planning. Electronic texts offer new ways to store, retrieve, update, and cross-link information. Hypermedia documents, in which texts are cross-linked via keywords and in which audio and video files may also be integrated, require new levels of organization and strict discipline from authors, editors, and managers. As documents become living their document managers must control access, privileges, interconnections, segmentation, and flexibility for different readers. This book introduces and surveys these new developments. Based on a wealth of experience in large hypermedia projects, it provides a step-by-step guide to all aspects of hypermedia development, from strategic decision-making to editing formats and production methods.
