PLATO: Portable Language-Independent Adaptive Translation from OCR. ,2008 This is the second R & D quarterly progress report (QPR) of the BBN-led team under DARPA's MADCAT program. The goal for the pre-processing and image enhancement task is to eliminate noise artifacts from documents. In this reporting period, we performed preliminary experiments to assess the usefulness of shape-DNA enhancement on machine-print and handwritten images. The shape-DNA approach uses a database of low- and high-resolution shapes and a probabilistic shape-mapping model. The database and mapping are both automatically learned from training data to estimate high-resolution details from low-resolution shapes.

ICT in Education, Research, and Industrial Applications Vadim Ermolayev, Heinrich C.

Mayr, Mykola Nikitchenko, Aleksander Spivakovsky, Grygoriy Zholtkevych, 2013-01-11 This book constitutes the refereed proceedings of the 8th International Conference on ICT in Education, Research, and Industrial Applications, held in Kherson, Ukraine, in June 2012. The 14 revised full papers were carefully reviewed and selected from 70 submissions. This book begins with an invited contribution presenting the substance of one of ICTERI 2012 invited talks. The chapter deals with the issues of abstraction and verification of properties in real-time Java programs. Python 2.1 Bible Dave Brueck, Stephen Tanner, 2001-06-29 The Python 2.1 Bible provides the only complete Python language reference on the market and includes all the information and software that developers need to use Python as a rapid application development tool. The Python 2.1 Bible fills a critical void in the Python reference market. Although it includes a complete Python language reference section, it is still geared towards those of you who already have some programming experience. This book explains each piece of technology in depth and shows through clear examples why each feature is useful. This is the manual you've been waiting for -- the one that covers all major Python components without

glossing over how the various pieces fit together.

Introduction to Real Analysis John

DePree, Charles Swartz, 1988-06-14 Assuming minimal background on the part of students, this text gradually develops the principles of basic real analysis and presents the background necessary to understand applications used in such disciplines as statistics, operations research, and engineering. The text presents the first elementary exposition of the gauge integral and offers a clear and thorough introduction to real numbers, developing topics in n -dimensions, and functions of several variables. Detailed treatments of Lagrange multipliers and the Kuhn-Tucker Theorem are also presented. The text concludes with coverage of important topics in abstract analysis, including the Stone-Weierstrass Theorem and the Banach Contraction Principle.

Dual Learning Tao Qin, 2020-11-13 Many AI (and machine learning) tasks present in dual forms, e.g., English-to-Chinese translation vs. Chinese-to-English translation, speech recognition vs. speech synthesis, question answering vs. question generation, and image classification vs. image generation. Dual learning is a new learning framework that leverages the primal-dual structure of AI tasks to obtain effective feedback or regularization signals in order to enhance the learning/inference process. Since it was first introduced four years ago, the concept has attracted considerable attention in multiple fields, and been proven effective in numerous applications, such as machine translation, image-to-image translation, speech synthesis and recognition, (visual) question answering and generation, image captioning and generation, and code summarization and generation. Offering a systematic and comprehensive overview of dual learning, this book enables interested researchers (both established and newcomers) and practitioners

to gain a better understanding of the state of the art in the field. It also provides suggestions for further reading and tools to help readers advance the area. The book is divided into five parts. The first part gives a brief introduction to machine learning and deep learning. The second part introduces the algorithms based on the dual reconstruction principle using machine translation, image translation, speech processing and other NLP/CV tasks as the demo applications. It covers algorithms, such as dual semi-supervised learning, dual unsupervised learning and multi-agent dual learning. In the context of image translation, it introduces algorithms including CycleGAN, DualGAN, DiscoGAN, cGAN and more recent techniques/applications. The third part presents various work based on the probability principle, including dual supervised learning and dual inference based on the joint-probability principle and dual semi-supervised learning based on the marginal-probability principle. The fourth part reviews various theoretical studies on dual learning and discusses its connections to other learning paradigms. The fifth part provides a summary and suggests future research directions.

RF and Microwave Passive and Active Technologies
Mike Golio, Janet Golio, 2018-10-03 In the high frequency world, the passive technologies required to realize RF and microwave functionality present distinctive challenges. SAW filters, dielectric resonators, MEMS, and waveguide do not have counterparts in the low frequency or digital environment. Even when conventional lumped components can be used in high frequency applications, their behavior does not resemble that observed at lower frequencies. RF and Microwave Passive and Active Technologies provides detailed information about a wide range of component technologies used in modern RF and microwave systems. Updated chapters include new

material on such technologies as MEMS, device packaging, surface acoustic wave (SAW) filters, bipolar junction and heterojunction transistors, and high mobility electron transistors (HMETs). The book also features a completely rewritten section on wide bandgap transistors.

Letterforms Timothy Samara, 2018-07-03 Designer, author, educator Timothy Samara is a world authority on type and graphic design. His 2004 Rockport book, *Typography Workbook* has become an essential reference text for design classrooms and industry professionals. Now, in *Letter Forms: The Design of Type, Past to Future* he takes readers even deeper, expertly guiding them through the aesthetics as well as the technical considerations of his subject. He begins with an overview spanning the invention of movable type to today's digital typography, and ends with a showcase of contemporary fonts. Samara's true focus in this book is conveying the essentials of type design to practitioners, and thoughtfully and thoroughly explaining and illustrating the development of form and style. He walks you through letter form anatomy, stroke formation and rhythm, tool methodologies, structure and proportion, tool methodologies, and tons more. This all makes for one excellent, timely reference work that designers can return to in designing logos, wordmarks, signage, titling accents, and all of their graphic design work.

The RF and Microwave Handbook Mike Golio, 2000-12-20 The recent shift in focus from defense and government work to commercial wireless efforts has caused the job of the typical microwave engineer to change dramatically. The modern microwave and RF engineer is expected to know customer expectations, market trends, manufacturing technologies, and factory models to a degree that is unprecedented in the
