*IBM Datacap Accounts Payable Capture* Jan den Hartog,Tom Stuart,IBM Redbooks,2015-07-17 The IBM® Datacap Accounts Payable Capture application is a learning application. Using a number of techniques, it has the ability to learn new instances of known documents when they are introduced into the system. The Accounts Payable Capture workflow can be used for many types of documents and applications, not just invoices. This IBM Redpaper™ publication discusses the role that IBM Datacap Accounts Payable Capture plays in Accounts Payable (AP). You are introduced to the different jobs in the workflow and examine the task profiles, rulesets, rules, functions, and actions that make it work. This paper guides you through the IBM Datacap Accounts Payable Capture application. The application is called a foundation application because it is used as a starting point for capturing complex machine-printed forms, such as invoices, that might contain line items. Because Accounts Payable Capture is continually evolving with new technologies and techniques, your version of the product might differ slightly from what is shown in this paper. However, most of the techniques described in this paper are applicable to any version of the product. After you have gained an understanding of how these technologies interact, you will be able to apply them to other data capture scenarios needing similar capabilities.

Now her experiences and expertise are available in this easy-to-read practical book. Overcoming School Refusal helps readers understand this complex issue by explaining exactly what school refusal is and provides them with a range of strategies they can use to assist children in returning to school. **Undocumented Secrets of MATLAB-Java Programming** Yair M. Altman,2011-12-05 For a variety of reasons, the MATLAB®-Java interface was never fully documented. This is really quite unfortunate: Java is one of the most widely used programming languages, having many times the number of programmers and programming resources as MATLAB. Also unfortunate is the popular claim that while MATLAB is a fine programming platform for prototyping, it is not suitable for real-world, modern-looking applications. Undocumented Secrets of MATLAB®-Java Programming aims to correct this misconception. This book shows how using Java can significantly improve MATLAB program appearance and functionality, and that this can be done easily and even without any prior Java knowledge. Readers are led step-by-step from simple to complex customizations. Code snippets, screenshots, and numerous online references are provided to enable the utilization of this book as both a sequential tutorial and as a random-access reference suited for immediate use. Java-savvy readers will find it easy to tailor code samples for their particular needs; for Java newcomers, an introduction to Java and numerous online references are provided. This book demonstrates how The MATLAB programming environment relies on Java for numerous tasks, including networking, data-processing algorithms and graphical user-interface (GUI) We can use MATLAB for easy access to external Java functionality, either third-party or user-created Using Java, we can extensively customize the MATLAB environment and application GUI, enabling the creation of visually appealing and usable applications
