Sometimes, we even begin to treat Allah with mistrust and suspicion. Without realising it, our hearts begin to whisper things like, "This must be because Allah is angry with us" or "these tests come one after another, when will it end?" Why do we think poorly of Allah? Isn't Allah's love and mercy deeper than His wrath? **Managing Diversified Portfolios** Daniel O. Klier,2009-05-28 There has been a long tradition of research on the relation between diversification and performance of public corporations in the strategy and finance fields. As for private equity portfolios, research on this matter is rather scarce. From a theoretical as well as from a practical perspective, however, it is interesting to know more about the relation between private equity portfolio diversification and performance, how private equity firms manage their portfolios, and what public companies can learn from private equity firms. These are the research questions which are addressed in Daniel Klier's research. In order to answer these questions, the author uses a two-tier research design. As a first step, he compares the diversification-performance link of public corporations and private equity firms. With respect to the private equity sample and the operationalization of the relevant variables, the study is highly innovative in terms of generating the PE sample from databases like Preqin and Dealogic, constructing a diversification measure from transaction data, and developing comparable performance measures for private equity firms as well as traditional multi-business firms. As the second step, which is exploratory in nature, the author explores management models of PE firms. The sample of 20 US and Europe-based private equity firms is unique and of high quality, because the author succeeded in getting in-depth interviews with top decision makers of PE firms. The exploratory study extracts three clusters of management models that PE firms are using, and their relation to performance.

**Assessing and Managing the Acutely Ill Adult Surgical Patient** Fiona McArthur-Rouse,Sylvia Prosser,2008-04-15 Assessing and managing the acutely ill adult surgical patient focuses on major surgical conditions and interventions commonly encountered in District General Hospitals which potentially require intensive monitoring and intervention. It emphasizes the importance of thorough assessment and interpretation of clinical data, and provides the necessary knowledge to help nurses make sense of their findings and to integrate theory and practice in relation to surgical care. Part one addresses principles of surgical care for all patients undergoing surgery — including pre-operative assessment and preparation, the peri-operative period and post-operative recovery, post-operative pain management and psychosocial aspects of surgery — which underpin the knowledge and rationale for practice. Part two considers specific surgical conditions and interventions, organised according to surgical specialities. Each chapter considers the underlying patho-physiology, investigation and diagnosis, assessment, monitoring and management of common acute surgical conditions within that specialty.

**Software Maintenance - A Management Perspective** Phaneendra Nath Vellanky,2007-10-23 Computer systems play an important role in our society. Software drives those systems. Massive investments of time and resources are made in developing and implementing these systems. Maintenance is inevitable. It is hard and costly. Considerable resources are required to keep the systems active and dependable. We cannot maintain software unless maintainability characters are built into the products and processes. There is an urgent need to reinforce software development practices based on quality and reliability principles. Though maintenance is a mini development lifecycle, it has its own problems. Maintenance issues need corresponding tools and techniques to address them. Software professionals are key players in maintenance. While development is an art and science, maintenance is a craft. We need to develop maintenance personnel to master this craft. Technology impact is very high in systems world today. We can no longer conduct business in the way we did before. That calls for reengineering systems and software. Even reengineered software needs maintenance, soon after its implementation. We have to take business knowledge, procedures, and data into the newly reengineered world. Software maintenance people can play an important role in this migration process. Software technology is moving into global and distributed networking environments. Client/server systems and object-orientation are on their way. Massively parallel processing systems and networking resources are changing database services into corporate data warehouses. Software engineering environments, rapid application development tools are changing the way we used to develop and maintain software. Software maintenance is moving from code maintenance to design maintenance, even onto specification maintenance. Modifications today are made at specification level, regenerating the software components, testing and integrating them with the system. Eventually software maintenance has to manage the evolution and evolutionary characteristics of software systems. Software professionals have to maintain not only the software, but the momentum of change in systems and software. In this study, we observe various issues, tools and techniques, and the emerging trends in software technology with particular reference to maintenance. We are not searching for specific solutions. We are identifying issues and finding ways to manage them, live with them, and control their negative impact.
