Password Generator for Ten-Sided Dice www.passwordgeneratordice.com, 2018-04-02 To generate a password using this password generator for ten-sided dice, you need two ten-sided dice: one labeled 0 to 9, and the other labeled 00 to 90. Roll the dice and add the numbers together. Turn to

that page. On that page there are a hundred nouns numbered from 0 to 99. Roll the dice again and add the numbers together to see which of those nouns you will include in your password. For example, if you roll a 2 and a 10 on your first roll, you would turn to page 12. Then if you roll an 8 and a 40, you would include the noun numbered 48, Software. If you include only one noun in your password, there is a 1 in 10 thousand chance that it will be guessed on the first try. This is inadequate for most security applications. So, repeat the process in the previous paragraph to get at least three more nouns to include in your password. Continuing the previous example, your password might be SoftwareBucketStarAnthropology. With four nouns, there is only a 1 in 10 quadrillion chance that it will be guessed on the first try.
