A Toolbox for Digital Twins Mark Asch , 2022-08-04 This book brings together the mathematical and numerical frameworks needed for developing digital twins. Starting from the basics—probability, statistics, numerical methods, optimization, and machine learning—and moving on to data assimilation, inverse problems, and Bayesian uncertainty quantification, the book provides a comprehensive toolbox for digital twins. Emphasis is also placed on the design process, denoted as the “inference cycle,” the aim of which is to propose a global methodology for complex problems. Readers will find guidelines and decision trees to help them choose the right tools for the job; a comprehensive reference section with all recent methods, covering both model-based and data-driven approaches; a vast selection of examples and all accompanying code; and a companion website containing updates, case studies, and extended material. *A Toolbox for Digital Twins: From Model-Based to Data-Driven* is for researchers and engineers, engineering students, and scientists in any domain where data and models need to be coupled to produce digital twins.

Psychiatric Interviewing E-Book Shawn Christopher

Shea, 2016-09-19 With time at a premium, today's clinicians must rapidly engage their patients while gathering an imposingly large amount of critical information. These clinicians appropriately worry that the person beneath the diagnoses will be lost in the shuffle of time constraints, data gathering, and the creation of the electronic health record. *Psychiatric Interviewing: The Art of Understanding: A Practical Guide for Psychiatrists, Psychologists, Counselors, Social Workers, Nurses, and other Mental Health Professionals*, 3rd Edition tackles these problems head-on, providing flexible and practical solutions for gathering critical information while always attending to the concerns and unique needs of the patient. Within the text, Dr. Shea deftly integrates interviewing techniques from a variety of professional disciplines from psychiatry to clinical psychology, social work, and counseling providing a broad scope of theoretical foundation. Written in the same refreshing, informal writing style that made the first two editions best sellers, the text provides a compelling introduction to all of the core interviewing skills from conveying empathy, effectively utilizing open-ended questions, and forging a powerful therapeutic alliance to sensitively structuring the interview while understanding nonverbal communication at a sophisticated level. Updated to the DSM-5, the text also illustrates how to arrive at a differential diagnosis in a humanistic, caring fashion with the patient treated as a person, not just another case. Whether the reader is a psychiatric resident or a graduate student in clinical psychology,

social work, counseling or psychiatric nursing, the updated third edition is designed to prepare the trainee to function effectively in the hectic worlds of community mental health centers, inpatient units, emergency rooms, and university counseling centers. To do so, the pages are filled with sample questions and examples of interviewing dialogue that bring to life methods for sensitively exploring difficult topics such as domestic violence, drug abuse, incest, antisocial behavior, and taking a sexual history as well as performing complex processes such as the mental status. The expanded chapter on suicide assessment includes an introduction to the internationally acclaimed interviewing strategy for uncovering suicidal ideation, the Chronological Assessment of Suicide Events (CASE Approach). Dr. Shea, the creator of the CASE Approach, then illustrates its techniques in a compelling video demonstrating its effective use in an interview involving a complex presentation of suicidal planning and intent. A key aspect of this text is its unique appeal to both novice and experienced clinicians. It is designed to grow with the reader as they progress through their graduate training, while providing a reference that the reader will pull off the shelf many times in their subsequent career as a mental health professional. Perhaps the most unique aspect in this regard is the addition of five complete chapters on Advanced and Specialized Interviewing (which comprise Part IV of the book) which appear as bonus chapters in the accompanying e-book without any additional cost to the reader. With over 310 pages, this web-based bonus section provides the reader with essentially two books for the price of one, acquiring not only the expanded core textbook but a set of independent monographs on specialized skill sets that the reader and/or faculty can add to their curriculum as they deem fit.

Information retrieval (IR) is becoming an increasingly important area as scientific, business and government organisations take up the notion of information superhighways and make available their full text databases for searching. Containing a selection of 35 papers taken from the 17th Annual SIGIR Conference held in Dublin, Ireland in July 1994, the book addresses basic research and provides an evaluation of information retrieval techniques in applications. Topics covered include text categorisation, indexing, user modelling, IR theory and logic, natural language processing,

statistical and probabilistic models of information retrieval systems, routing, passage retrieval, and implementation issues.

Digital Control Engineering M. Sami Fadali, Antonio Visioli, 2019-12-01 Digital controllers are part of nearly all modern personal, industrial, and transportation systems. Every senior or graduate student of electrical, chemical, or mechanical engineering should therefore be familiar with the basic theory of digital controllers. This new text covers the fundamental principles and applications of digital control engineering, with emphasis on engineering design. Fadali and Visioli cover analysis and design of digitally controlled systems and describe applications of digital

control in a wide range of fields. With worked examples and Matlab applications in every chapter and many end-of-chapter assignments, this text provides both theory and practice for those coming to digital control engineering for the first time, whether as a student or practicing engineer. This new edition covers new topics such as Model Predictive Control and Linear Matrix Inequalities. To engage students, it has more illustrations and simple examples; the mathematical notation is reduced where possible, and it also includes intermediate mathematical steps in derivations. Companion website features resources for instructors, including Powerpoint slides and solutions. Extensive use of CAD Packages: Matlab and Simulink sections at the end of each chapter show how to implement concepts from the chapter. Contains review material to aid understanding of digital control analysis and design. Includes some advanced material to make it suitable for an introductory graduate level class or for two quarters at the senior/graduate level. The mathematics background required for understanding most of the book is based on what can be reasonably expected from the average electrical, chemical, or mechanical engineering senior.

Concept-Based Video Retrieval Cees G. M. Snoek, Marcel Worring, 2009 In this paper, we review 300 references on video retrieval, indicating when text-only solutions are unsatisfactory and showing the promising alternatives which are in majority concept-based. Therefore, central to our discussion is the notion of a semantic concept: an objective linguistic description of an observable entity. Specifically, we present our view on how its automated detection, selection under uncertainty, and interactive usage might solve the major scientific problem for video retrieval: the semantic gap. To bridge the gap, we lay down the anatomy of a concept-based video search engine. We present a component-wise decomposition of such an interdisciplinary multimedia system, covering influences from information retrieval, computer vision, machine learning, and human-computer interaction. For each of the components we review state-of-the-art solutions in the literature, each having different characteristics and merits. Because of these differences, we cannot understand the progress in video retrieval without serious evaluation efforts such as carried out in the NIST TRECVID benchmark. We discuss its data, tasks, results, and the many derived community initiatives in creating annotations and baselines for repeatable experiments. We conclude with our perspective on future challenges and opportunities.

Soft Computing and Intelligent Data Analysis in Oil Exploration M. Nikravesh, L.A. Zadeh, Fred Aminzadeh, 2003-04-22 This comprehensive book highlights soft computing and geostatistics applications in hydrocarbon exploration and

production, combining practical and theoretical aspects. It spans a wide spectrum of applications in the oil industry, crossing many discipline boundaries such as geophysics, geology, petrophysics and reservoir engineering. It is complemented by several tutorial chapters on fuzzy logic, neural networks and genetic algorithms and geostatistics to introduce these concepts to the uninitiated. The application areas include prediction of reservoir properties (porosity, sand thickness, lithology, fluid), seismic processing, seismic and bio stratigraphy, time lapse seismic and core analysis. There is a good balance between introducing soft computing and geostatistics methodologies that are not routinely used in the petroleum industry and various applications areas. The book can be used by many practitioners such as processing geophysicists, seismic interpreters, geologists, reservoir engineers, petrophysicist, geostatisticians, asset managers and technology application professionals. It will also be of interest to academics to assess the importance of, and contribute to, R&D efforts in relevant areas.
