Seo Toolbook Jason McDonald, 2015-11-22 Free Tools for SEO in a Comprehensive Directory REVISED for 2016 - to cover new topics such as content marketing, Google+, and the new link-building! Why buy PAID TOOLS when you can use the many FREE TOOLS available on the Internet? You just have to know where to look. Used by Jason McDonald in his online SEO classes as well as

classes at Stanford Continuing Studies and classes at San Francisco's Bay Area Video Coalition and AcademyX, the SEO Toolbook is a MUST HAVE for anyone who wants to dominate Google, Bing, or Yahoo. Here's what you get: Tools for every aspect of SEO, starting at Keywords proceeding through Page Tags, Link-building, and Diagnostics and ending up at rank measurement and Google Analytics. Web links to each and every free tool. A description of the tool plus a relevancy score. In addition to tools, pointers to tutorials, blogs, and trade shows on Search Engine Optimization as well as official free Google resources and even funny Easter Eggs. Access to the online edition, including Jason's dashboard of clickable tool links. IMPORTANT ALERTS The SEO Toolbook is available FREE in PDF format (not hard copy!) to folks who take any of Jason's classes (both online and in San Francisco), as well as subscribers to the JM INTERNET GROUP email lists. Buy this book ONLY if you want a hard copy, printed version of this important search engine optimization tools directory. The SEO Toolbook is a wonderful companion to all books on SEO such as SEO For Dummies, SEO an Hour a Day, Search engine optimization 2016, etc. Understand How the SEO Toolbook Works First and foremost, the SEO Toolbook assumes a working knowledge of SEO. This toolbook has many wonderful free tools, but the tools alone are useless without a knowledge of how the game is played! (If you need that knowledge, we recommend you check out my SEO Fitness Workbook (on Amazon), online courses a, or call 800-298-4065 to learn more about my SEO one-on-one training and consulting services). Second, this book emphasizes only free tools. Despite the fact that there are quite a few paid SEO tools out there, none are any better than the free tools identified in this Toolbook. Indeed, in today's tight economy, why pay when you can get them for free? Not to mention, why pay when the most important element, i.e. a knowledge of how SEO is played to win, can't be obtained from any tool? Third, we have reviewed each tool in the Toolbook for relevance and ease of use. Almost without exception, the tools

in the Toolbook require nothing more than a Web browser and active connection to the Internet. Easy is just as important as free. Generally speaking, if a tool requires registration or has only a trial period, it has been excluded.

Gaining Insight into User and Search Engine Behaviour by Analyzing Web Logs Jeeva Jose,P. Sojan Lal,2016-10-04 Web Usage Mining, also known as Web Log Mining, is the result of user interaction

with a Web server including Web logs, click streams and database transaction or the visits of search engine crawlers at a Website. Log files provide immense source of information about the behavior of users as well as search engine crawlers. Web Usage Mining concerns usage of common browsing patterns i.e. pages requested in sequence from Web logs. These patterns can be utilized to enhance the design and modification of a Website. Analyzing and discovering user behavior is helpful for understanding what online information users inquire and how they behave. The analyzed result can be used in intelligent online applications, refining Websites, improving search accuracy when seeking information and lead decision makers towards better decisions in changing markets like putting advertisements in ideal places. Similarly, the crawlers or spiders are accessing the Websites to index new and updated pages. These traces help to analyze the behavior of search engine crawlers. The log files are unstructured files and of huge size. These files need to be extracted and pre-processed before any data mining functionality to follow. Pre-processing is done in unique ways for each application. Two pre-processing algorithms are proposed based on indiscernibility relations in rough set theory which generates Equivalence Classes. The first algorithm generates a pre-processed file with successful user requests while the second one generates a pre-processed file for pre-fetching and caching purposes. Two algorithms are proposed to extract usage analytics. The first algorithm identifies the origin of visits, the top referring sites and the most popular keywords used by the visitor to arrive at a Website. The second algorithm extracts user agents like browser with its version and operating system with its version used by a visitor to access a Website. In this study, clustering of users based on Entry Pages to a Website is done to analyze the deep linked traffic at a Website. The Top Ten Entry Pages, the traffic and the temporal information of the Top Ten Entry Pages are also studied.

**Baidu SEO** Véronique Duong,2017-06-29 SEO practices for Baidu and other Chinese search engines are little known in the Western world. However, in order for a company to promote itself successfully in the Middle Kingdom, it is absolutely necessary to go online in China. Chinese SEO is not only about working on the on-site and off-site aspects of a site, there are also many administrative tasks to take into account: the creation of a site in China can pose governmental problems (obtaining a Chinese mobile line, applying for an ICP license, proving that the company is well established in China, etc.) In order for readers to understand how SEO and web-marketing works in China, tips, advice and case studies are presented throughout this book.

*Professional Search Engine Optimization with PHP* Cristian Darie,Jaimie Sirovich,2007-04-18

Maybe you're a great programmer or IT professional, but marketing isn't your thing. Or perhaps you're a tech-savvy search engine marketer who wants a peek under the hood of a search engine optimized web site. Search engine marketing is a field where technology and marketing are both critical and interdependent, because small changes in the implementation of a web site can make you or break you in search engine rankings. Furthermore, the fusion of technology and marketing know-how can create web site features that attract more visitors. The mission of this book is to help web developers create web sites that rank well with the major search engines, and to teach search engine marketers how to use technology to their advantage. We assert that neither marketing nor IT can exist in a vacuum, and it is essential that they not see themselves as opposing forces in an organization. They must work together. This book aims to educate both sides in that regard.
