**Process Physics** Reginald T. Cahill,2005 This book is about a new and very radical information-theoretic approach to comprehending and modelling reality. It is called Process Physics because it uses a process model of time rather than, as in current physics, a non-process geometrical model of time, a model so successfully developed and used by Galileo, Newton, Einstein and others that for many physicists the phenomenon of time is actually identified with this geometrical model. Now, for the first time in the history of physics, we have a model of time that includes the distinctions between past, present and future. These distinctions cannot be made in the geometrical model of time. For this reason we can call the current prevailing physics Non-Process Physics. In Process Physics we turn to a fundamental reformulation of the key concepts in physics. This entails that we must identify both the successes and failures of the Non-Process Physics, for it almost succeeded.

Backed by the largest language research program in the world at Oxford University Press, this new book presents an up-to-the-minute snapshot of English language today: tracking the latest new words to have entered its usage; investigating old words revived by current events in, for example, the worlds of politics and pop; and examining the most recent trends of language development. This intriguing survey covers language issues reported by the media in recent times, including memorable quotations and sayings of the year; nicknames in the news; new venues for language, such as Internet chatrooms; and controversial developments in usage and grammar. It also analyzes English around the world, uncovering the latest words and phrases to enter our vocabulary; and explores what new words were hundreds of years ago, and how they've developed or disappeared. An ideal reference for all word lovers, this new book offers a fascinating tour of the English language today.
