*Advances in Sound Localization* Pawel Strumillo,2011-04-11 Sound source localization is an important research field that has attracted researchers' efforts from many technical and biomedical sciences. Sound source localization (SSL) is defined as the determination of the direction from a receiver, but also includes the distance from it. Because of the wave nature of sound propagation, phenomena such as refraction, diffraction, diffusion, reflection, reverberation and interference occur. The wide spectrum of sound frequencies that range from infrasounds through acoustic sounds to ultrasounds, also introduces difficulties, as different spectrum components have different penetration properties through the medium. Consequently, SSL is a complex computation problem and development of robust sound localization techniques calls for different approaches, including multisensor schemes, null-steering beamforming and time-difference arrival techniques. The book offers a rich source of valuable material on advances on SSL techniques and their applications that should appeal to researches representing diverse engineering and scientific disciplines.

**Light Harvesting in Photosynthesis** Roberta Croce,Rienk van Grondelle,Herbert van Amerongen,Ivo van Stokkum,2018-01-12 This landmark collective work introduces the physical, chemical, and biological principles underlying photosynthesis: light absorption, excitation energy transfer, and charge separation. It begins with an introduction to properties of various pigments, and the pigment proteins in plant, algae, and bacterial systems. It addresses the underlying physics of light harvesting and key spectroscopic methods, including data analysis. It discusses assembly of the natural system, its energy transfer properties, and regulatory mechanisms. It also addresses light-harvesting in artificial systems and the impact of photosynthesis on our environment. The chapter authors are amongst the field's world recognized experts. Chapters are divided into five main parts, the first focused on pigments, their properties and biosynthesis, and the second section looking at photosynthetic proteins, including light harvesting in higher plants, algae, cyanobacteria, and green bacteria. The third part turns to energy transfer and electron transport, discussing modeling approaches, quantum aspects, photoinduced electron transfer, and redox potential modulation, followed by a section on experimental spectroscopy in light harvesting research. The concluding final section includes chapters on artificial photosynthesis, with topics such as use of cyanobacteria and algae for sustainable energy production. Robert Croce is Head of the Biophysics Group and full professor in biophysics of photosynthesis/energy at Vrije Universiteit, Amsterdam. Rienk van Grondelle is full professor at Vrije Universiteit, Amsterdam. Herbert van Amerongen is full professor of biophysics in the Department of Agrotechnology and Food Sciences at Wageningen University, where he is also director of the MicroSpectroscopy Research Facility. Ivo van Stokkum is associate professor in the Department of Physics and Astronomy, Faculty of Sciences, at Vrije Universiteit, Amsterdam.

**Photosynthesis V1** Unknown Govindjee,2012-12-02 Photosynthesis, Volume 1: Energy Conversion by Plants and Bacteria tackles the conversion of light energy into the production of ATP and NADPH in both plants and bacteria. The various aspects of the energy conversion process in plants and bacteria are thoroughly discussed in this volume. The concepts and terms employed in the book are used integrally, except when a process is unique to one system. This book, which comprises of six parts, emphasizes both the biochemical and biophysical aspects of photosynthesis. It includes a review of the historical development of major concepts, an analysis of experimental data, and an exposition of subsequent findings. The first part of this book serves as the foundation of basic terms and concepts that will be used all throughout in this book. Part II deals with the structure and function, whereas Part III with the primary photochemistry. Part IV is about electron transport, while Part V focuses on photophosphorylation. The last part deals with the biosynthesis of pigments. This book will be a great reference for researchers. It will also be an introductory work for students in cell biology, physiology, biochemistry, and biophysics.
