*Empirical-statistical Downscaling* Rasmus E. Benestad,Inger Hanssen-Bauer,Deliang Chen,2008 Empirical-statistical downscaling (ESD) is a method for estimating how local climatic variables are affected by large-scale climatic conditions. ESD has been applied to local climate/weather studies for years, but there are few ? if any ? textbooks on the subject. It is also anticipated that ESD will become more important and commonplace in the future, as anthropogenic global warming proceeds. Thus, a textbook on ESD will be important for next-generation climate scientists.

**Molecular Water Oxidation Catalysis** Antoni Llobet,2014-04-14 Photocatalytic water splitting is a promising strategy for capturing energy from the sun by coupling light harvesting and the oxidation of water, in order to create clean hydrogen fuel. Thus a deep knowledge of the water oxidation catalysis field is essential to be able to come up with useful energy conversion devices based on sunlight and water splitting. Molecular Water Oxidation Catalysis: A Key Topic for New Sustainable Energy Conversion Schemes presents a comprehensive and state-of-the-art overview of water oxidation catalysis in homogeneous phase, describing in detail the most important catalysts discovered today based on first and second row transition metals. A strong emphasis is placed on the description of their performance, as well as how they work from a mechanistic perspective. In addition, a theoretical description of some of the most relevant catalysts based on DFT are presented, as well as a description of related natural systems, such as the oxygen evolving system of photosystem II and the heme chlorite-dismutase. This book is a valuable resource for researchers working on water oxidation catalysis, solar energy conversion and artificial photosynthesis, as well as for chemists and materials scientists with a broad interest in new sustainable energy conversion schemes.

**Hazardous Materials Incidents** Chris Hawley,2002 Marked by its risk-based response philosophy, Hazardous Materials Incidents is an invaluable procedural manual and all-inclusive information resource for emergency services professionals faced with the challenge of responding swiftly and effectively to hazardous materials and terrorism incidents. Easy-to-read and perfect for use in HazMat awareness, operations, and technician-level training courses, this Operations Plus book begins by acquainting readers with current laws and regulations, including those governing emergency planning and workplace safety. Subsequent chapters provide in-depth information about personal protective equipment and its limitations; protective actions ranging from site management and rescue through evacuation and decontamination; product control including the use of carbon monoxide detectors; responses to terrorism and terrorist groups; law enforcement activities such as SWAT operations and evidence collection; and more! A key resource for every fire, police, EMS, and industrial responder, Hazardous Materials Incidents is one of the few books available today that is modeled on current ways of thinking about HazMat and terrorism responses and operations.

**Tsunamis and Seiches** ,2008 A discussion of major types of natural disasters, including descriptions of some of the most destructive; explanations of these phenomena, what causes them, and where they occur; and information about how to prepare for and survive these forces of nature. **Million Dollar Blackjack** Ken Uston,2014-11-14 Contrary to popular opinion, anyone who enters a casino can win at blackjack. In blackjack, unlike many casino games, your winnings depend on skill rather than chance. Players have left behind billions of dollars at the blackjack table, but it doesn't have to be that way anymore World famous blackjack expert Ken Uston provides seven simple rules to improve your game and presents students with four levels of winning skills. Strategies start with the Simple Plus/Minus for beginners and work up to the Advanced Plus/Minus and the Uston Ace-Five Count. Million Dollar Blackjack also explains the Uston Advance Point Count method, used by some of the world's top blackjack professionals. Notoriously hailed the blackjack bible, Million Dollar Blackjack remains one of the most pivotal and comprehensive guides on the game. Breaking down the various rules, strategies, and counting methods, Uston discloses the tactics that made him a multi-million dollar winner. In this book, he covers nearly every aspect of casino blackjack from selecting the right game, to avoiding being barred, to the illegal side of blackjack, to cheating dealers and players. Million Dollar Blackjack details a myriad of playing techniques fortified by insider information. Ken Uston has carefully evaluated all previous blackjack theories and schools to offer you the most comprehensive guide on the game. Ken Uston (1935-1987) was arguably the world's foremost blackjack player and game strategist. He graduated from Yale with a BA in Economics and received his MBA in Finance from Harvard. After a stint as the Senior Vice President of the Pacific Coast Stock Exchange, Uston traded his three-piece suit for the unpredictable life of the professional gambler. During his blackjack career, he mastered card counting, which led him to be barred from a number of casinos. Uston won a lawsuit against casinos in New Jersey, which protested the banishment of card-counting players, and its ruling

still holds today. Uston has authored a number of bestselling books including Ken Uston on Blackjack and Mastering Pac-Man.

*Feedback* David Joselit,2007 In a world where politics is conducted through images, the tools of art history can be used to challenge the privatized antidemocratic sphere of American television. American television embodies a paradox: it is a privately owned and operated public communications network that most citizens are unable to participate in except as passive specators. Television creates an image of community while preventing the formation of actual social ties because behind its simulated exchange of opinions lies a highly centralized corporate structure that is profoundly antidemocratic. In *Feedback*, David Joselit describes the privatized public sphere of television and recounts the tactics developed by artists and media activists in the 1960s and 1970s to break open its closed circuit. The figures whose work Joselit examines--among them Nam June Paik, Dan Graham, Joan Jonas, Abbie Hoffman, Andy Warhol, and Melvin Van Peebles--staged political interventions within television's closed circuit. Joselit identifies three kinds of image-events: feedback, which can be both disabling noise and rational response--as when Abbie Hoffman hijacked television time for the Yippies with flamboyant stunts directed to the media; the image-virus, which proliferates parasitically, invading, transforming, and even blocking systems--as in Nam June Paik's synthesized videotapes and installations; and the avatar, a quasi-fictional form of identity available to anyone, which can function as a political actor--as in Melvin Van Peebles's invention of Sweet Sweetback, an African-American hero who appealed to a broad audience and influenced styles of Black Power activism. These strategies, writes Joselit, remain valuable today in a world where the overlapping information circuits of television and the Internet offer different opportunities for democratic participation. In *Feedback*, Joselit analyzes such midcentury image-events using the procedures and categories of art history. The trope of figure/ground reversal, for instance, is used to assess acts of representation in a variety of media--including the medium of politics. In a televisual world, Joselit argues, where democracy is conducted through images, art history has the capacity to become a political science.

**Hydrogen as a Future Energy Carrier** Andreas Züttel,Andreas Borgschulte,Louis Schlapbach,2011-09-22 This book fills the gap for concise but comprehensive literature on this interdisciplinary topic, involving chemical, physical, biological and engineering challenges. It provides broad coverage of the most important fields of modern hydrogen technology: hydrogen properties, production, storage, conversion to power, and applications in materials science. In so doing, the book covers all the pertinent materials classes: metal hydrides, inorganic porous solids, organic materials, and nanotubes. The authors present the entire view from fundamental research to viable devices and systems, including the latest scientific results and discoveries, practical approaches to design and engineering, as well as functioning prototypes and advanced systems.

**Carpenter's Gothic** William Gaddis,1999-03-01 This story of raging comedy and despair centers on the tempestuous marriage of an heiress and a Vietnam veteran. From their carpenter gothic rented house, Paul sets himself up as a media consultant for Reverend Ude, an evangelist mounting a grand crusade that conveniently suits a mining combine bidding to take over an ore strike on the site of Ude's African mission. At the still center of the breakneck action--revealed in Gaddis's inimitable virtuoso dialogue--is Paul's wife, Liz, and over it all looms the shadowy figure of McCandless, a geologist from whom Paul and Liz rent their house. As Paul mishandles the situation, his wife takes the geologist to her bed and a fire and aborted assassination occur; Ude issues a call to arms as harrowing as any Jeremiad--and Armageddon comes rapidly closer. Displaying Gaddis's inimitable virtuoso dialogue, and his startling treatments of violence and sexuality, *Carpenter's Gothic* shows again that Gaddis is among the first rank of contemporary American writers (Malcolm Bradbury, *The Washington Post Book World*).
