Health Systems Recovery in the Context of COVID-19 and Protracted Conflict Zsuzsanna Jakab,Sohel Saikat,Duncan Selbie,Saqif Mustafa,Yu Zhang,Geraldine McDarby,Mila Petrova,Redda Seifeldin,2023-07-10 The COVID-19 pandemic has caused unprecedented disruption worldwide highlighting once again the interdependency of health and socioeconomic development, and the global lack of health systems resilience. Two years into the pandemic, most countries report sustained disruptions across service delivery platforms and health areas with a profound impact on health outcomes. The impact of these disruptions is magnified within marginalized communities and in countries experiencing protracted conflict. There is an urgent need to focus on recovery through investment in the essential public health functions (EPHFs) and the foundations of health systems with a focus on primary health care, and whole-of-government and -society engagement. The aim of this Research Topic is to gather, transfer and promote operationalization of key experiences from COVID-19 to inform global and country level recovery that better promote health; guide policy direction towards building health systems resilience; and thereby ensure economic and social prosperity. Experience with COVID-19 has demonstrated that traditional approaches to health system strengthening have failed to achieve the complementary goals of Universal Health Coverage (UHC) and health security with the divide between the most vulnerable and well-off only widening. Much of what had been learned from previous experiences such as Ebola in West Africa has not been widely applied. This has left health and economic systems vulnerable to 21 st century public health challenges, ranging from conflict and natural disasters

to aging demographics and rising rates of non-communicable and communicable diseases and antimicrobial resistance. These challenges require intentional focus and investment as well as whole-of-government and -society engagement with health to build health system resilience. Greater action is needed to prevent the devastating effects of war and conflict on the health of the most vulnerable. This Research Topic will convene the knowledge and practices of leaders in public health, health systems, and humanitarian and development sectors. This is to ensure lessons from COVID-19 inform the recovery agenda and promote sustainable health and socioeconomic recovery for all. Lest we forget and find ourselves again unprepared and vulnerable in the face of an even greater threat.

*Disaster Recovery and Backup Solutions for IBM FileNet P8 Version 4.5.1 Systems* Wei-Dong Zhu,Gary Allenbach,Ross Battaglia,Julie Boudreaux,David Harnick-Shapiro,Heajin Kim,Bob Kreuch,Tim Morgan,Sandip Patel,Martin Willingham,IBM Redbooks,2015-04-13 Many organizations require continuous operation of their mission-critical, IBM® FileNet P8® systems after a failure has occurred. Loss of system resources and services as a result of any failure can translate directly into lost customers and lost revenue. The goal, therefore, is to design and implement a FileNet P8 system that ensures continuous operation even after a failure happens. This IBM Redbooks® publication focuses on FileNet P8 Version 4.5.1 systems disaster recovery. The book covers strategies, preparation levels, site sizing, data replication, testing, and what to do during a disaster. Backup and restore planning is a critical aspect of a disaster recovery strategy. We discuss backup types and strategies. We also discuss alternative strategies such as rolling storage policies and IBM FlashCopy® capability. With the help of use cases and our lab testing environment, the book provides guidelines for setting up a FileNet P8 production environment and a standby FileNet P8 disaster recovery system. This book is intended for IT architects, IT specialists, project managers, and decision makers, who must identify the best disaster recovery strategies and integrate them into the FileNet P8 system design process.

**High Availability and Disaster Recovery** Klaus Schmidt,2006-09-02 Companies and institutions depend more than ever on the availability of their Information Technology, and most mission critical business processes are IT-

based. Business Continuity is the ability to do business under any circumstances and is an essential requirement faced by modern companies. Both concepts - High Availability and Disaster Recovery - are realized by redundant systems. This book presents requirements, concepts, and realizations of redundant systems on all abstraction levels, and all given examples refer to UNIX and Linux Systems.
