Digital Color Imaging Handbook Gaurav Sharma, Raja Bala, 2017-12-19 Digital technology now enables unparalleled functionality and flexibility in the capture, processing, exchange, and output of color images. But harnessing its potential requires knowledge of color science, systems, processing algorithms, and device characteristics-topics drawn from a broad range of disciplines. One can acquire the requisite background with an armload of physics, chemistry, engineering, computer science, and mathematics books and journals- or one can find it here, in the Digital Color Imaging Handbook. Unprecedented in scope, this handbook presents, in a single concise and authoritative publication, the elements of these diverse areas relevant to digital color imaging. The first three chapters cover the basics of color vision, perception, and physics that underpin digital color imaging. The remainder of the text presents the technology of color imaging with chapters on color management, device color characterization, digital halftoning, image compression, color quantization, gamut mapping, computationally efficient transform algorithms, and color image processing for digital cameras. Each chapter is written by world-class experts and largely self-contained, but cross references between chapters reflect the topics' important interrelations. Supplemental materials are available for download from the CRC Web site, including electronic versions of some of the images presented in the book.

Advances in Networked-based Information Systems Leonard Barolli,Hiroaki Nishino,Tomoya Enokido,Makoto Takizawa,2019-08-14 This book focuses on the emerging areas of information networking and its applications, presenting the latest innovative research and development techniques from both theoretical and practical perspectives. Today's networks and information systems are evolving rapidly, and there are new trends and applications in information networking, such as wireless sensor networks, ad hoc networks, peer-to-peer systems, vehicular networks, opportunistic networks, grid and cloud computing, pervasive and ubiquitous computing, multimedia systems, security, multi-agent systems, high-speed networks, and web-based systems. However, since these networks need to be capable of managing the increasing number of users, provide support for different services, guarantee the QoS, and optimize the network resources, a number of research issues and challenges have to be considered in order to provide solutions.

Copper Scroll Studies George J. Brooke,Philip R. Davies,2004-07-09 This book contains the papers delivered at the 1996 Copper Scroll Symposium which was organized by the Manchester-Sheffield Centre for Dead Sea Scrolls Research to mark the 40th Anniversary of the opening of this enigmatic scroll in Manchester. The papers cover the history of the Scroll's interpretation (P. Muchowski, P. Davies, B. Segal, M. Wise); how it should be conserved, restored and read (N. Cacoudre, M. Lundberg, E. Puech); how it was produced

(P. Kyle McCarter); the meaning of its technical terms (J.F. Elwolde, A. Lange, J. Lefkovits, J. Lubbe, L. Schiffman); its genre (M. Bar-Ilan, R. Fidler, T. Lim); its geography (P.S. Alexander); its correlation with archaeological remains (H. Eshel); and not least who wrote it, when and why (S. Goranson, I Knohl, H. Stegemann, B. Thierine, A. Wolters) with an Introduction by G. Brooke. This is volume 40 in the Journal for the Study of Pseudepigrapha Supplement series.

Proceedings of the Third International Scientific Conference “Intelligent Information Technologies for Industry” (IITI’18) Ajith Abraham, Sergey Kovalev, Valery Tarassov, Vaclav Snasel, Andrey Sukhanov, 2018-12-05 This book contains papers presented in the main track of IITI 2018, the Third International Scientific Conference on Intelligent Information Technologies for Industry held in Sochi, Russia on September 17–21. The conference was jointly co-organized by Rostov State Transport University (Russia) and VŠB – Technical University of Ostrava (Czech Republic) with the participation of Russian Association for Artificial Intelligence (RAAI). IITI 2018 was devoted to practical models and industrial applications related to intelligent information systems. It was considered as a meeting point for researchers and practitioners to enable the implementation of advanced information technologies into various industries. Nevertheless, some theoretical talks concerning the state-of-the-art in intelligent systems and soft computing

were also included into proceedings.

The Fractional Fourier Transform Haldun M. Ozaktas, M. Alper Kutay, Zeev Zalevsky, 2001-02-08 The discovery of the Fractional Fourier Transform and its role in optics and data management provides an elegant mathematical framework within which to discuss diffraction and other fundamental aspects of optical systems. This book explains how the fractional Fourier transform has allowed the generalization of the Fourier transform and the notion of the frequency transform. It will serve as the standard reference on Fourier transforms for many years to come.

Photography and Collaboration Daniel Palmer, 2020-09-14 Photography and Collaboration offers a fresh perspective on existing debates in art photography and on the act of photography in general. Unlike conventional accounts that celebrate individual photographers and their personal visions, this book investigates the idea that authorship in photography is often more complex and multiple than we imagine – involving not only various forms of partnership between photographers, but also an astonishing array of relationships with photographed subjects and viewers. Thematic chapters explore the increasing prevalence of collaborative approaches to photography among a broad range of international artists – from conceptual practices in

the 1960s to the most recent digital manifestations. Positioning contemporary work in a broader historical and theoretical context, the book reveals that collaboration is an overlooked but essential dimension of the medium's development and potential.

Introduction to Information Retrieval Christopher D. Manning,Prabhakar Raghavan,Hinrich Schütze,2008-07-07 Class-tested and coherent, this textbook teaches classical and web information retrieval, including web search and the related areas of text classification and text clustering from basic concepts. It gives an up-to-date treatment of all aspects of the design and implementation of systems for gathering, indexing, and searching documents; methods for evaluating systems; and an introduction to the use of machine learning methods on text collections. All the important ideas are explained using examples and figures, making it perfect for introductory courses in information retrieval for advanced undergraduates and graduate students in computer science. Based on feedback from extensive classroom experience, the book has been carefully structured in order to make teaching more natural and effective. Slides and additional exercises (with solutions for lecturers) are also available through the book's supporting website to help course

instructors prepare their lectures.
