Review of Biotreatment, Water Recovery, and Brine Reduction Systems for the Pueblo Chemical Agent Destruction Pilot Plant National Research Council,Division on Engineering and Physical Sciences,Board on Army Science and Technology,Committee on Review of Biotreatment, Water Recovery, and Brine Reduction Systems for the Pueblo Chemical Agent Destruction Pilot Plant,2013-07-17 The Pueblo Chemical Depot (PCD) in Colorado is one of two sites that features U.S. stockpile of chemical weapons that need to be destroyed. The PCD features about 2,600 tons of mustard-including agent. The PCD also features a pilot plant, the Pueblo Chemical Agent Destruction Pilot Plant (PCAPP), which has been set up to destroy the agent and munition bodies using novel processes. The chemical neutralization or hydrolysis of the mustard agent produces a Schedule 2 compound called thiodiglycol (TDG) that must be destroyed. The PCAPP uses a combined water recovery system (WRS) and brine reduction system (BRS) to destroy TDG and make the water used in the chemical neutralization well water again. Since the PCAPP is using a novel process, the program executive officer for the Assembled Chemical Weapons Alternatives (ACWA) program asked the National Research Council (NRC) to initiate a study to review the PCAPP WRS-BRS that was already installed at PCAPP. 5 months into the study in October, 2012, the NRC was asked to also review the Biotreatment area (BTA). The Committee on Review of Biotreatment, Water Recovery, and Brine Reduction Systems for the Pueblo Chemical Agent Destruction Pilot Plant was thus tasked with evaluating the operability, life-expectancy, working quality, results of Biotreatment studies carried out prior to 1999 and 1999-2004, and the current design, systemization approached, and planned operation conditions for the Biotreatment process. Review of Biotreatment, Water Recovery, and Brine Reduction Systems for the Pueblo Chemical Agent Destruction Pilot Plant is the result of the committee's investigation. The report includes diagrams of the Biotreatment area, the BRS, and WRS; a table of materials of construction, the various recommendations made by the committee; and more.

Advances in Research on the Strength and Fracture of Materials D. M. R. Taplin,2013-10-22 Advances in Research on the Strength and Fracture of Materials: Volume 2Bs—Fatigue contains the proceedings of the Fourth International Conference on Fracture, held at the University of Waterloo, Canada, in June 1977. The papers review the state of the art with respect to fracture in a wide range of materials such as metals and alloys. This volume is comprised of 85 chapters and opens by discussing the metallographic aspects of fatigue in pearlitic structures and the dislocation diffusion mechanism of fatigue crack formation. The reader is then introduced to localized plastic deformation and fracture in slip bands during fatigue loading of age hardening aluminum alloys; the microstructure of fatigue fracture surfaces in titanium; mechanisms of liquid metal embrittlement, stress corrosion cracking, and corrosion-fatigue; and the fatigue behavior of macroscopic slag inclusions in steam turbo-generator rotor steels. A model for fatigue crack initiation in polycrystalline solids is also described. This monograph will be a useful resource for metallurgists, materials scientists, and structural and mechanical engineers.

Energy Conserve in Industry — Combustion, Heat Recovery and Rankine Cycle Machines H. Ehringer,G. Hoyaux,P. Pilavachi,2013-04-18 The main objectives of the Ccmnunity's energy policy consist of securing a sufficient energy supply for the present and future demand of its Member States and in reducing the Community's dependence on imported energy through the more rational use of energy and a broader diversifi cation of supply. This requires a full set of common efforts at all levels, including energy research and development. In the framework of its strategy for scientific and technological research the Commission of the European Ccmnunities has launched several R & D progranunes in the field of energy. Theses progranunes are :implemented either directly in its Joint Research Centre or by concluding contracts with research institutions in the EC Member countries. One of the most inportant short and medil.UR term objectives of the present four-year Energy R & D Progranune (1979 - 1983) approved by the Council of Ministers on 13 September 1979 aims at fostering energy conservation technologies in the three main energy consl.Uning sectors: danestic, industry and transport. In the European Carmunity more than 35% of the energy is conslB'lied in industry. About 23% of the inported oil is used in this sector. Two thirds of this energy are used for heating purposes. Consequently, there is a high potential for residuary heat recovery. In order to enhance rational use of energy and energy conservation in the Member States of the Ccmnunity, it is necessary, among other things, to promote the development of combustion and energy recovery techniques.

Aphasia David Frank Benson,Alfredo Ardila,1996 An up-to-date, integrated analysis of the language disturbances associated with brain pathology, this book examines the different types of aphasia combining two clinical approaches: the neurological and the neuropsychological. Although they stress the clinical aspects of aphasia syndromes, they also review assessment techniques, linguistic analyses, problems of aphasia classification, and frequently occurring related disorders such as alexia, agraphia, alculculia, and anomia. In addition, they examine commonly encountered speech disorders, neurobehavioral and psychiatric problems commonly associated with aphasia, and the language characteristics of aging and dementia. Rehabilitation and recovery are discussed, and a neural basis for aphasia and related problems is proposed. Neuropsychologists, neurologists, speech therapists, psychiatrists, and occupational therapists will find this book invaluable when dealing with language disorders resulting from brain disease or injury.
